Teen Titans (Blüdhaven) —

Active PC Rankings & Analysis

The scales are primarily a Tier-1 Special Operations Unit–style personnel readiness, suitability, and threat-exposure assessment, scored and aggregated using sports-analytics methodology.

SNAPSHOT	Post-Session 17 · Campaign Day 56 (Saturday; in-world 2026-12-12), plus about a day in a pocket dimension that the hosts say Earth will not feel · Rank 3.5	**ROSTER ANALYSED**	Oracle · Intrepid · Quasar-Force · Lock-Step · Edge (*Exemplar II departed — archived in §11*)
MODEL	Claude Opus 5.5, run as a Claude Code cloud session (cheesy exploit to use the free promotional usage credits, exploit advised by Claude itself)	**SCOPE**	102 ranked axes · 510 scored placements · one departed-PC archive
FORMAT	every placement is itemised twice — an **All-time** case for the score and a **Session 17** shift with its reason (see *How to read an entry*)		

0.43

Oracle's composite lead over Quasar-Force, against 0.427 for Session 16 restated with Heroism (0.394 as published)

+0.980

Edge's composite: up 0.367 and third on both methods; 86% of the rise is play, not the rebuild

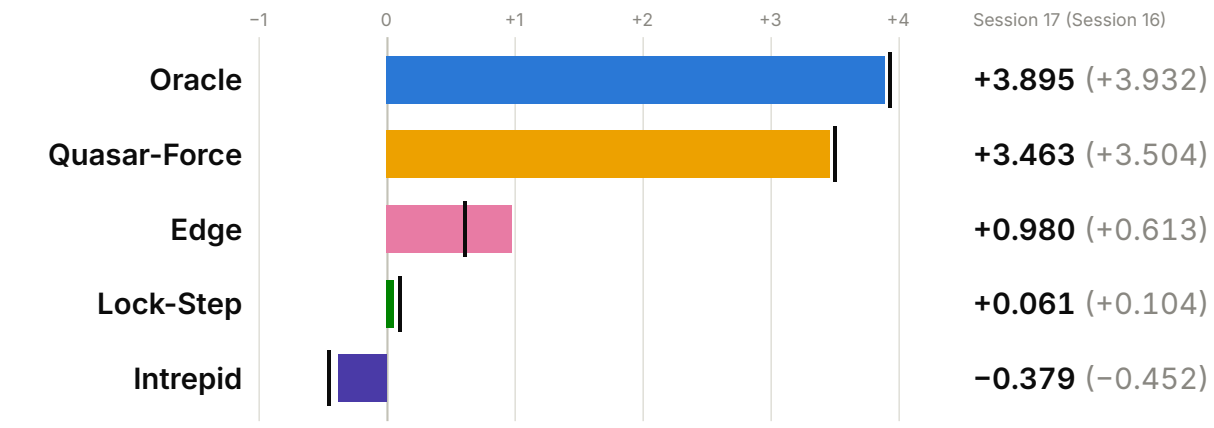

130

placements moved on the five-person board, 62 of them Edge's (31 of those the re-spec)

102

ranked axes: Heroism added at 1.14, with a retroactive Session 16 baseline

Composite net score, 95 axes

Session 17 composite on the −10…+10 scale, 95 non-fame axes; black ticks mark Session 16, restated on the same 102 axes with Heroism at its retroactive baseline (§10.1.2).

Reading Notes

All content is generated by AI (Claude).

Sources Fed to AI to generate this:

- (85% human) Roster and Logs, Session 17 edition.
- (100% human) Superheroic Excursion Log, through Session 17 – https://docs.google.com/document/d/1s3vu046GPrY7sqZHHgVPIIbyYcj4GD0gDTFs5CZrZbU/edit
  - Sessions 1–4 are from memory well after the sessions occurred.
  - Session 12 is assisted by OBS recording and AI transcription.
  - Session 13 is assisted by OBS recording and AI transcription, and in the dense roleplay, technobabble and lorebabble there is a lot of copy/pasting from the AI transcription, since it is superior in detail and accuracy. Still technically human, as it was spoken by humans.
  - Sessions 14 and 15 are assisted by OBS recording and AI transcription, but copied and pasted a lot less. They were manually transcribed from the audio recording with the AI transcription used as subtitles, for even more detail and accuracy (the AI transcript is good but not perfect, and its speaker assignment is poor).
- (AI-generated) The Session 16 edition of this document — the baseline for every score, finding and revision history carried forward. Its own Snapshot line read *Post-Session 15*; that was a stale label, and this edition's line is corrected.
- No other documents were attached. Earlier editions drew some minor bleed from stored notes on prior conversations (the Iron-Side and Nightwing reports, the psychological evaluations, the Wenas family therapy session); none was available to this revision, so whatever bleed survives here survives through the Session 16 text.

Sources of the 102 scales:

- 40% from myself, the human
- 30% from Anthropic Claude
- 20% from Google Gemini
- 10% from OpenAI ChatGPT
- 10% from the remainder of the 'council of 12 AIs' – Z.AI GLM, Moonshot Kimi, xAI Grok, High-Flyer DeepSeek, MiniMax Agent Max, Alibaba Qwen, Meta Muse Spark, Mistral Vibe, Amazon Nova

This is an out-of-character analytical document. It uses mechanics, GM-side lore and player knowledge freely. Where a judgement depends on information no PC possesses, it is marked OOC. Where a judgement depends on information only *some* characters hold, the holder is named.

How to read an entry. All 510 placements now have the same shape:

> 1 **Name** **score**
>
> ALL-TIME The standing, campaign-wide case for the score.
>
> SESSION 17 **7.0 → 7.5 (+0.5)** The shift since the last edition, and why.

- **All-time** is the character's standing file on that axis across Sessions 1–16: the sheet, the traits and backstory, the repeated behaviour, and the incidents that set the level. **Session 16's detail has been folded into it**, and earlier sessions compressed, so that the file reads as one case rather than a stack of revisions.
- **Session 17** states the shift as numbers, measured from the Session 16 edition's score (for the new 1.14 Heroism, from its retroactive Session 16 baseline): **`S16 → S17 (change)`**, or *holds at* when the score did not move. It then gives the Session 17 evidence and the reasoning for the size and direction of the move, or for the hold.
- **On the §2 risk axes** a more negative number means more exposure, so the label adds *exposure up* or *exposure down*.
- **Edge is a returning member this revision, with one session of file.** His *All-time* item is that file: his backstory and his first fight, which he fought on a sheet he has since rebuilt. Where his Session 17 number moved because of the rebuild rather than play, the shift carries RE-SPEC, and the item says what changed on the sheet. Read every Edge score as still provisional; two sessions is a short file.

Ranking convention: Position 1 = most of the named quality. Where a low score is desirable (burnout risk, enemy targeting, legal exposure), position 1 = highest risk, and the axis header says so explicitly. Positions run 1–5. Where two characters share a score, the printed order is the tie-break and the axis carries a note: on the Logic-driven non-combat axes, ties between Intrepid and Edge are broken on Logic, and other ties are broken on the record, with the reason stated.

Confidence markers:

- Orderings drawn from repeated logged behaviour are stated plainly.
- *Closest call* explains the split where the logs support two defensible orderings.
- *Volatile* marks a ranking that would move on a single die roll, GM ruling or piece of unconfirmed lore.
- FLAG marks a score that depends on something the document cannot see.
- RULING cites a house rule or roster ruling.
- MECHANICAL FLAG marks a sheet-level caveat.
- RE-SPEC marks a movement caused by Edge's rebuild rather than by play.
- ADVANCE marks a movement caused by Oracle's newly declared Rank 3.5 advances.
- RETCON marks a correction to something the Session 16 edition reported from the end of Session 16 that the log has since withdrawn.
- NEW AXIS marks 1.14 Heroism, added this revision. Its Session 16 figures are a retroactive baseline, scored on the record through Session 16 with the retcon applied.

Damage notation. Damage multipliers are written *multiplier* + *add* per the roster convention: **7+7** is a ×7 multiplier with +7 applied after the multiplication, not a flat bonus of 14. Expected values use a Marvel-die mean of 4.33 (a roll of 1 counts as 6) and exclude Fantastic doubling, edges, assists and Focus investment. Edge's Elemental Blast adds +1 to his damage bonus for every 2 Focus spent, like Intrepid's Smash; the table in §4.10 shows the base line.

The roster did not change. Two sheets did.

- **Edge rebuilt himself.** Between sessions his player replaced the marksman's kit — Agility 7, Accuracy 4, Stopping Power, Double Tap, Suppressive Fire, Slow-Motion Dodge, Situational Awareness, the Cutting Edge and his Healing Factor — with Force elemental control run off Ego. He now has **Ego 7 with Discipline 4 (×7+7), Elemental Blast (Force) as his Signature Attack, Elemental Burst (Force), Supernova (Force) and Lightning Actions**, on Melee 6 with Brawling, Sturdy 3, Uncanny 1, Wisdom and Heightened Senses 2. His abilities read Melee 6, Agility 0, Resilience 3, Vigilance 2, Ego 7, Logic −1; his defences 19/19/16/13/18/18; H-DR 3, F-DR 1. His role is now *Kinetic Force Artillery & Disciplined Vanguard*, and his power summary describes "*Catastrophic Invisible slashing force producing precise unseen cuts at range and sweeping storms of blades that carve through everything around him at once.*"
- **What it buys:** the team's second area attack, the heaviest single-target output per round on the roster, a guaranteed Marvel on initiative, and Ego 7 — level with Lock-Step for the highest social ability score on the team.
- **What it costs:** his healing factor, his dodge, his Suppressive Fire and every point of Agility.
- **Oracle's two Rank 3.5 advances are declared**, after three sessions undeclared: **Agility 4 → 5 and Accuracy 1 → 2**, the last two items on his Rank 3→4 plan. His line is now ×5+5 and his physical defences 18/18/16. Neither advance is the ego- or logic-based power that projects strength, or Uncanny, so the four FLAGs the last edition carried on §4.2, §4.5, §6.4 and §7.3 resolve to *no change*: the counter-build is still open. The roster lists him at Rank 3.5 with all five Rank 3→4 items taken.
- **The mentor tag is settled.** Edge's roster tags now read *Mentor (Oracle / Barbara Gordon)*: the Oracle who found him online and called the Birds was Barbara Gordon, not the team's Oracle. The FLAG the last edition carried on §1.8, §2.6, §5.12 and §5.15 is closed.

One axis was added. NEW AXIS **1.14 Heroism**, in §1: the willingness to take a risk or pay a cost for someone else — the public, a teammate, or an enemy. Its Session 16 figures are a retroactive baseline, and every Session 16 aggregate in §10 is restated on 102 axes so that the comparisons stay like for like. Its order is the same at both points — Oracle, Intrepid, Edge, Quasar-Force, Lock-Step — and the only rise on it in Session 17 is the newcomer's.

The session is the story of this revision. At the end of Session 16 the team was not at home and briefing Wonder Woman, as the last edition reported. RETCON It was at a staging point in the next building, where Oracle's module "*makes him feel weird*" and he passed out, and Lock-Step, held up only by Let's Go, went down with him. They woke in a military bunk room in a pocket dimension, "*selected for the newest episode of arena ball*," and "*elected by a representative of your world*" — "*Minji Lin aka Firefly aka the tiny terror aka Death from Nowhere.*" Every outside line failed inside the first hour:

- **The drones** did not respond.
- **Guy Gardner's communicator** answered "*The dimension you're trying to reach is currently unavailable.*"
- **Lock-Step's teleport** found its target out of range.
- **His hexed telepathic link** to Blitzkrieg found no mind to reach.
- **The mother box** could not reach the Source, and said so, a letter at a time, ending in "*Help.*"

The hosts gave the team 24 hours of rest, a maze and a colosseum, and set it against Earth X357's Teen Titans:

- **Facade**, a power copier who had already copied Oracle.
- **Pink-Shift**, a shape-shifter who heals.
- **Capricorn**, a horned brick.
- **Four-Fold**, a four-armed telepath.
- **Briar Patch**, a plant controller.

The hosts promised to return the team "*in whatever state you end up in, precisely at the moment and place that you left.*" **The fight paused at the start of Round 2.**

The newcomer asked the question this document has carried for two revisions. No Titan had objected on the record to the Destined errand — Lock-Step's private request in Session 15 that a villain team kill a detainee. In Session 17 the member who had been on the team for an afternoon asked: *"if they're really killing people that's kind of our problem too right?"* The answers set the session's character scores:

- **Lock-Step:** "*deaths we're not worried about right now. We're trying to save the world first*," and "*we can either save and protect our righteousness or actually save people's lives.*"
- **Quasar-Force:** "*One thing I'm very confident on is that the destined will kill every man and woman in that lab, whether the progenitor is there or not*," and then "*we needed to save the world and we were short on hands.*"
- **Oracle** vouched for Lock-Step's account of the stakes — that the Justice League wants them to save the world: "*There was a time I doubted Lockstep, and he's preaching the gospel*" — and did not object to the killing.
- **Intrepid:** "*I get what you're saying.*"
- **Edge,** later, as a rule for the arena that Lock-Step accepted: "*We follow the rule when it's easy and when it's hard. Otherwise, it's not a rule, it's a mood.*"

The lead held, to within half a hundredth. Oracle +3.895 against Quasar-Force +3.463 is a lead of 0.432, against 0.427 last revision restated with Heroism (0.394 as published); both fell by about four hundredths, for different reasons. **Edge rose 0.367, to +0.980, and 86% of the rise is play rather than the rebuild.** He is now third on both headline composites (the 95 non-fame axes), so the score-based and position-based methods agree on third place for the first time. One hundred and thirty placements moved, 62 of them Edge's (31 of those are the re-spec).

- **Oracle** moved on 18 axes, five of them his advances. He emptied his battery to 5 of 180 getting the two teammates without healing factors on their feet, and then said the sentence that moves him: "*I still believe in saving people. I just think that most of the people telling us what to do don't know what they're doing.*" In the arena a copy of him beat him with his own Point-Blank Parry.
- **Quasar-Force** moved on 19, twelve for the worse. He drew a one-minute penalty for ripping a nullifier out of a wall, which froze him at the door. He told another universe's Titans that he will not age, where his father works, and that "*the crooked one*" works in his building. The box he calls Stella asked him for help, and he could not reach her.
- **Lock-Step** moved on 18, fourteen for the worse. He defended the errand to the newcomer as doctrine, refused to rehearse a formation, and held the team at the door. He stayed with the frozen Quasar-Force ("*I just don't feel comfortable leaving our youngest*") and gave Earth X357 his real first name.
- **Intrepid** moved on 13, eleven for the better — the largest net gain among the four veterans. He was the first into the uniform, called the rest the team took, and worked out at the door that "*time is a factor in this competition.*" Then he argued with Lock-Step and walked on without him.
- **Edge** moved on 62. He knocked out his opponent in the Marvel round with two Force blasts and then sat down in the stands. He fed everyone, and pushed for a team maneuver until he gave up ("*I give up, I completely give up*"). He also punched a teammate who had asked to be punched, with a full combat punch, for 15.

Principal evidence gaps:

- **The retcon.** Some of the end of Session 16 was withdrawn. **Gone:** Oracle's post-fight heals on Lock-Step and Quasar-Force, the trip home, and the debrief with Wonder Woman. **Kept:** Dragonborne's flight, Edge's rear guard, the extraction (run on Let's Go), Blitzkrieg's withdrawal, the destroyed device and the villains left behind. Every Session 16 claim built on the withdrawn part is corrected where it sits and marked RETCON.
- **The paused fight.** Session 17's combat evidence is one Marvel round and one round. It is scored as recorded, and nothing in §4 moves on it by more than half a point except through the sheets.
- **Who took them, and why.** "*Firefly*" is unknown to the team. Whether the abduction is connected to the hive's Session 16 order to "*collect*" the team is unknown. VOLATILE
- **Earth X357.** Its Titans are opponents, not enemies. Their mentor, "*Batman,*" used to be "*Raven*" and is a chaos mage. The pairings were mostly theirs, and Facade picked Oracle.
- **The return promise.** If the hosts keep it, nothing on Earth moved while the team was away, and the 24-hour clock from Session 15 stopped with them. This document takes the promise as stated.
- **Two Rank-4 powers at Rank 3.5.** Lightning Actions and Supernova both list Rank 4 as a prerequisite and sit on Edge's Rank 3→4 track, which the campaign appears to allow. MECHANICAL FLAG Scored as printed.
- **Point-Blank Parry** appears on Oracle's power list. This document had never recorded it, and it was used against him by his copy.
- **Nightwing and Batman are off screen for a fourth session.** No report to anyone was possible from the pocket dimension, and the retcon removes the one report the last edition thought had been made.
- **Wonder Woman as the team's de facto mentor** is still the user's reading. The GM has not declared it, so this document treats it as practice rather than appointment.
- **The roster's poster-prompt section** still describes Edge's old kit ("*Spatial-severing ranged weapon attacks and suppressive fire*"). It is ignored.

Scoring. Every entry carries a cardinal score alongside its position, because ordinal rank alone cannot tell a rout from a photo finish. **Three native scales are used, chosen by what each axis actually measures**; the full rationale is in 10.0:

- **Magnitude** `0.0 to 10.0` — Low means *absent*, never *harmful*.
- Capability and exposure:
  - §3.6–3.9 – Team Internals, Command Chair & Pecking Order
  - §4 – Power / Ability – Combat
  - §5 – Power / Ability – Non-combat
  - §6 – Capability Robustness & Conditionality
  - §7 – Power / Ability – Overall
  - §8 – Fame (Exposure)
- Anchors:
  - 0 none, completely absent capability
  - 5.0 competent baseline for a Rank 3 street-level hero
  - 8.5 elite for the tier
  - 10 best plausible at Rank 3.
- **Valence** `−10.0 to +10.0` — These have a real negative pole: a person can be an active liability, not merely lacking.
- Psychology, discipline, standing and opinion:
  - §1 – Psychology, Morality, and Discipline
  - §3.1–3.5 – Team Internals: internal reputation, influence, trust, cohesion, and low operational support burden
  - §9 – Reputation / Opinion
- Anchors:
  - +10 maximal asset
  - 0 genuinely neutral
  - −10 maximal liability.
- **Risk** `−10.0 to 0.0` — Always signed negative, because exposure is only ever a cost.
- Threat exposure:
  - §2 – Enemy Risk
- Anchors:
  - 0 = none meaningful
  - −10 = maximal, operations already underway.

510 scores total (102 scales times 5 PCs).

Score Quick Recognition Pattern:

- §2 – Enemy Risk is always negative, `−10.0 to 0.0` Risk.
- Everything else – If the score has a sign, it is `−10.0 to +10.0` Valence. Otherwise it is `0.0 to 10.0` Magnitude.

Scores are the Session 17 figures printed in §1–§9; position 1 on the §2 risk axes is the most exposed member. Heroism (1.14) is new this revision, and its arrows run from its retroactive Session 16 baseline. Section means on the composite scale are in §10.1.3.

§1 Psychology, Morality, and Discipline

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

Session 17 is the most character-heavy session since Session 15: a day of enforced rest in a captor's bunk room, an argument about the Destined errand, an argument about a formation, an argument at a door, and a short staged fight. Section 1 moved on 29 placements, nineteen of them among the four veterans — more than any other section. It also gains a fifteenth axis, Heroism, inserted at 1.14 (NEW AXIS).

1.1 Current Psychological Stability

1 Oracle +7.5

ALL-TIME The most settled person in the building: a purposeful role, accepted structure, and until this revision no running quarrel with any authority. Session 14 was the test — held in an inescapable grab, drained from 180 Focus to 3, unable to heal a teammate one-shot in front of him — and he called Wonder Woman himself and reported the failure plainly. Eidetic Memory is the hazard that never shows: he does not get to forget the bisection, the jars or the body he failed to revive. Session 15 recorded the first weariness in his voice ("*It's no different than Nightwing*"). Session 16 tested him physically: a 72-point Banging Heads put him at −2, his healing factor got him up, and he ran back in on a sliver of Health — "*Drop me again, it was worth it.*" **Stability is what he showed; weariness is what he said.**

SESSION 17 **holds at +7.5** He was the first to act in the bunk room ("*Let's get everybody up*"), reported his own state honestly ("*My battery's about gone now*"; "*my power is broken*"), and gave the arena the steadiest line in it: "*I just want to get through this and all of us turn out without anybody getting hurt.*" **The weariness acquired a target:** "*I still believe in saving people. I just think that most of the people telling us what to do don't know what they're doing.*" That is the first running quarrel with authority on his file, and it is scored where it costs, in 1.3, 1.15 and §9. His behaviour all session was the calmest in the room. Holds.

2 Edge +3.0

ALL-TIME Composed from his first line in Session 16 ("*I don't want to break your hope*") to his last stand, when a glitch bomb put him at exactly 0, his healing factor got him up, and he held off Blitzkrieg alone for a round. Against it, the heaviest identity load on the roster: constant headaches since the powers arrived, eyes that glow, white hair, and a legend that he is a monster reborn that once "*cut down armies.*"

SESSION 17 **holds at +3.0** The chronic symptom appeared in play for the first time — "*Where are we, guys? Wow, my head hurts*" — and then he was the most constructive person in the room for a day: a plan, food for everyone, and "*Okay, don't lose hope... There's always a way out.*" He also said what holding himself together costs: "*I practice my concentration a lot because if I don't, things could get bad.*" The roster's rewritten profile says the same thing about him — "*actively restrains the lethal impulses of his past life*" — and no longer describes the question as open. At the door, after an argument he could not win, came "*I give up, I completely give up.*" **Composure that takes constant work is the score he already has.**

3 Quasar-Force +2.0

ALL-TIME His composure has been a fixture of the campaign, and part of it is not his. The mother box holds a "*Peter Pan think happy thoughts*" baseline in its host and damps the panic-fear and anger that would impair his logic. **The famous calm is partly a second party's thermostat**: a pencil sketch of Azimuth overrode it for five minutes in Session 14. He worked out mid-attack that the panic was not his, recovers absurdly fast, named the box Stella in Session 15, and said "*I might end up better off dead*" without visible distress. Session 16 knocked him to −5 and then to −30, the deepest knockdown on his file, with no panic recorded.

SESSION 17 **holds at +2.0** **The thermostat was tested from its own side.** In the pocket dimension he had "*trouble concentrating*" through "*something about the buzzing*," and when he finally reached the box after several hours, she spelled out that she could not reach the Source, that the dimension was isolated, "*I am still with you. Don't be afraid*," and then "*Source—no! No! No—*" and "*Help.*" He failed the Ego roll to comfort her, and she withdrew. What the log records of him afterwards is the same boy — "*think happy thoughts!*", "*Well, we can be friends!*" — and either his calm is now his own or the box is still damping it from withdrawal. Nothing in the log tells the two apart. Holds; the risk is scored in 1.2 and 2.6.

4 Intrepid +1.0

ALL-TIME Iron Will and Fearless are on the sheet, and for most of the campaign his interior surfaced only in asides — the Session 10 monologue and its self-medication ladder. Session 14 put it into words as a fear of being discarded; Session 15 held the first forward-looking line he has said ("*Not yet anyway*"). Session 16 was the most punishing fight on his file — his Sturdy stolen, down twice — and when offered an exit he refused it.

SESSION 17 **holds at +1.0** Two voices, evenly matched. The practical one put the uniform on first, called the rest and worked out that the penalty meant "*time is a factor.*" The fatalistic one said "*We're basically going to lose*," "*We just lost the fight, but it's okay*," and "*I give up too. I'm gonna keep going. Screw it.*" Nothing about losing control. Holds.

5 Lock-Step −4.5

ALL-TIME Mechanically the most armoured mind in the party, and psychologically the most defended by avoidance. He is an orphan who says he is *glad* to have no parents, fills his time with dates and parties, distrusts adults by default, and has Berserk on his sheet. Session 15 put the most load on him of any session, and he stayed lucid. Session 16 opened with the longest anti-adult statement on his file and then the first explanation he has ever given of himself — "*Adults being adults and actually being helpful. Once I get that back, I think I'll be a bright-eyed kid just like you... But until then, this is me*" — followed at once by "*Maybe I just need another party.*"

SESSION 17 **holds at −4.5** The most visibly rattled member of the bunk room: "*My brain went on vacation*," "*I'm freaking out right now*," "*Oh fuck*," and a request to be punched to find out whether he was dreaming. Told who had sent them, he ran the anti-adult file again ("*another failed adult... Are they all just free balling*"), and ended on "*I feel like we have too much to do.*" In the arena he asked another universe's Titans whether their adults were useless too, got "*yeah, pretty useless*" in unison, and turned to Quasar-Force: "*Did you hear that?*" That is confirmation, not repair ("*once you grow up, you know, it's just bad*"). Against it: lucid all day, no Berserk, and the warmest decision of his session, staying with the frozen youngest. **The structure is unchanged.**

1.2 Psychological Resilience vs Future Trauma (Trauma Processing & Recovery Rate)

1 Quasar-Force +7.0

ALL-TIME The best demonstrated recovery curve on the team. Stabbed from 60 Health to −12 in Session 14, he was pacing the air within the hour. The roster explains the curve, and the explanation is not entirely reassuring: the box is deliberately building his resilience to trauma and panic. **The resilience is real, it is engineered, and the engineer has PTSD.** Session 15 put that half under expert care. Session 16 showed the curve between two knockdowns: kept upright by Let's Go at −5, he healed on Karma, went to cover and was back at work.

SESSION 17 **+7.5 → +7.0 (−0.5)** The second recovery of Session 16 is still untested — he woke from −15 only when Oracle put 60 into him. **What Session 17 tested was the engineer.** Cut off from the Source in an isolated dimension, the box panicked mid-sentence and asked him for help, and he could not reach her. For seven revisions this axis has said half of his resilience is her work; this is the first session in which she needed more support than she gave. Still first, by half a point.

2 Oracle +6.5

ALL-TIME A steady base, a purposeful role, Determination, and caretaking that protects him. The fracture line this axis has named since Session 9 is specific: *if Endo is seriously hurt on Oracle's watch, Oracle is the one who breaks.* Session 14 came as close as it could without arriving. In Session 16 it arrived — Endo at −5 and then −30 — and he had the tools: Let's Go for four rounds, 15 Health in, and his own recovery from −2 in between. **He has still not talked about Session 14.**

SESSION 17 **holds at +6.5** The fracture line again, in its quiet form: Endo lay at −15 through the abduction, and Oracle's first act on waking was to put 60 into him and 60 into Edge, leaving himself 5 of 180. Nothing was said about Sessions 14 or 16. What is new is the coping style — the problem is the people above them ("*most of the people telling us what to do don't know what they're doing*") — which is new on his file and is scored in 1.3. Holds.

3 Edge +3.5

ALL-TIME His backstory is a trauma with a clean before and after: an assault near him, the attacker's weapon sliced to pieces, then the headaches, the glowing eyes and the white hair. **His response was the healthiest one available — he went looking for help**, and trained "*all-out*" with Black Canary when it came. In Session 16 he took 102 damage, went to exactly 0, got up and held a doorway.

SESSION 17 **+3.0 → +3.5 (+0.5)** Abducted to another dimension on the day he joined, he did what his backstory says he does and looked for structure: a plan ("*We can train for at least three of those 24 hours*"), food for the room, hope ("*There's always a way out*") and a method ("*one problem at a time*"). The one disclosure he made is the load: "*if I don't, things could get bad.*" **The coping is active, outward and healthy; the cost is permanent.**

4 Intrepid +1.5

ALL-TIME Iron Will, Fearless, Enduring Constitution, and a real willingness to take hits so others don't. Session 14 showed how he metabolises defeat: by lowering expectations. The trauma he is least equipped for is still the one most likely to arrive — he has come within one die roll of killing ordinary humans three times — and the only coping he has ever described is the Session 10 ladder from aspirin to buying off the street. Session 16 brought the first power ever stolen from a Titan, and he recorded no reaction to it.

SESSION 17 **holds at +1.5** Defeat arrived as a forecast rather than an event: "*We're basically going to lose*," and "*if the powers that be tell us we lost, then we lost.*" That is the Session 14 method — expect less, and it can't hurt — used before the fight instead of after it. Holds.

5 Lock-Step −5.5

ALL-TIME Lowest, and the mechanics agree with the fiction: Berserk is a hardwired route from trauma to violence, avoidance is his default, and every pressure on him delivers the same message, *you are dangerous and you don't belong.* Session 15 gave him the first admitted cost ("*it would hurt my soul*"). Session 16 gave the first accurate account of the wound — adults who were meant to be "*actually being helpful*" and weren't — and then "*Maybe I just need another party*," and a one-shot from 60 to −24.

SESSION 17 **holds at −5.5** The wound named in Session 16 was reopened by the loudspeaker ("*another failed adult*") and closed by agreement from another universe. Taken from a fight that had one-shot him into a dimension he could not leave, he asked to be punched, was punched hard, and talked about the Protection Hex instead of the fight: "*I definitely don't ever want to take that off.*" Processing: none. Recovery: fast and theatrical, as always. Holds.

1.3 Operational Longevity / Low Burnout Risk

(Position 1 = most sustainable.)

1 Oracle +6.0

ALL-TIME He sleeps, eats, cooks, patrols, reports and accepts the structure he is given, which removes the largest single source of teenage-hero attrition. **For six revisions his one real risk was load, not morale.** He is the medic, the cook, the comms relay, the overwatch and Quasar-Force's unappointed guardian. Session 14 drained him to 3 Focus; Session 15 recorded the first doubt; Session 16 named him "*our plan guy*" and made him the only healer in a fight that put all five Titans on the floor.

SESSION 17 **+6.5 → +6.0 (−0.5)** **Both halves of burnout showed up in one session for the first time.** Exhaustion: "*My battery's about gone now*," 5 of 180, and most of the rest period asleep. Cynicism: "*I still believe in saving people. I just think that most of the people telling us what to do don't know what they're doing*," and, of Nightwing's briefing of the newcomer, "*So now you know the kind of stuff we got to put up with.*" **The morale entry is now on file.** Still first, on a tie.

2 Quasar-Force +6.0

ALL-TIME Intrinsically motivated to an unusual degree, with no physical attrition curve: pristine cellular maintenance, frozen ageing, and a full 60 Health back in ten hours of sleep. **The failure mode is self-maintenance, not motivation**: with structure imposed from outside he is fine. Session 15's six days of building were restorative; Session 16 cost him time at −30 rather than motivation.

SESSION 17 **holds at +6.0** His motivation was the most durable thing in the room — "*We kind of lost the last two missions. We got to try not to fail this one*," and "*Better just some of us than none of us.*" What he lost was structure: no drones, no parts, and a rest period spent on a box that answered "*Help.*" Holds.

3 Intrepid +2.5

ALL-TIME He loves the tank role, is good at it and heals between fights, so his physical attrition is low. The risk is psychological accumulation behind the physical durability, which surfaced out loud in Session 14. Session 16's 290 damage, and his refusal to leave, are both the tank's motivation working and exactly the accumulation this axis watches.

SESSION 17 **holds at +2.5** He did what keeps a tank going — "*It's time we need to meditate. We need to sleep. I think we got a fight coming up*" — and the accumulation came out as fatalism (1.2). Holds.

4 Edge +2.0

ALL-TIME The case for him is structure — two mentors, deliberate training — and the case against is the body: "*constant headaches*" since the powers arrived, a chronic symptom tied to the power itself, and grades that "*were already bad*" before training took the time.

SESSION 17 **holds at +2.0** The item to watch was logged: "*my head hurts*," on waking. The structure case got stronger (he asked for training time) and the attrition case got a second item, the one he volunteered — constant concentration practice "*because if I don't, things could get bad.*" RE-SPEC His combat loop is no longer cheap (§4.3), which is a cost of the job rather than of the person. And at the door, "*I give up, I completely give up.*" The items cancel.

5 Lock-Step −2.0

ALL-TIME The only member whose attrition risk comes from his relationship with adults: a file of structural grievances, school to the legal minimum, and "*keep it street level.*" What changed across Sessions 13–15 is that the grievances kept being answered — pay, Wonder Woman's commitment, a ring and a succession — and kept coming back. Session 16 had both halves at full volume: the longest grievance on file, and then the "*if it all goes to hell*" job done on the last of his Focus.

SESSION 17 **holds at −2.0** "*I still felt like we already had a lot to do, and now I feel like we have too much to do*" is the first time he has described the load rather than the grievance. His view of the arena — "*this is like a side mission... we still have a mission mission after the side mission*" — is the motivation that matters, holding. Holds.

Closest call: Oracle over Quasar-Force on a tie at **+6.0**, broken on structure: Oracle slept when the battery emptied; Quasar-Force spent the rest period on a box in distress.

1.4 Personal Discipline Outside of Combat

1 Oracle +7.5

ALL-TIME Structured mornings, breakfast for the house, patrols on schedule and reports filed. What sets him apart is that he holds a line under social pressure. The only deduction in sixteen sessions is the Session 12 all-nighter, managed through the proper channel. Session 14 added a correctly managed recovery under medical orders.

SESSION 17 **holds at +7.5** The session's day of downtime he spent the right way: heal the two who could not wake, report the battery honestly, sleep. Holds.

2 Intrepid +4.5

ALL-TIME First up every morning, oatmeal, out on patrol while still wounded, and he defers to team decisions without sulking. Against him: no initiative, no questions when invited to ask them, and a private drift toward self-medication.

SESSION 17 **+4.0 → +4.5 (+0.5)** The member who did what the situation required, first and without fuss. He was first into the uniform — "*That's just exploitation*," and then "*Actually, that might be my new uniform from going forward*" — and the one who called the rest the team took. **He passes Quasar-Force.**

3 Quasar-Force +4.0

ALL-TIME Rule-following but not self-regulating, and the gap between the halves defines his score. On duty he is excellent; off duty he needs structure from outside. Session 14 was four tasks at once and a sedative. Session 15 was the reverse: an order of work stated three times and three builds delivered, with the Watchtower supplying the structure.

SESSION 17 **+4.5 → +4.0 (−0.5)** **The off-duty half, with a bill attached.** Looking for parts, he found the hidden cameras and the power-nullification projectors beside them, then pulled one out of the wall with telekinesis — "*Player B3, purposeful damage of facilities, penalty one minute*" — and began opening it after the warning, until Lock-Step told him to put it in the box. The penalty froze him at the door when the countdown ended. **Curiosity outran the rules, and the team paid for it in time.**

4 Edge +3.5

ALL-TIME The one off-duty fact in his Session 16 file ran both ways: he trained "*all-out*" with Black Canary, and his grades "*were already bad*" before that. On arrival he asked for the plan, then for the situation, which is the right order.

SESSION 17 **+2.5 → +3.5 (+1.0)** A full day off duty, and it reads like discipline. He told the team how he prepares ("*I practice my concentration a lot*"), asked for three of the 24 hours to train a formation, and fed the room. He also moved from "*I will not do what the speakers are saying because I don't like to follow a strangers saying what to do*" to "*for now, I think we should do what it says*" as soon as the facts were in. The punch is scored in 1.9.

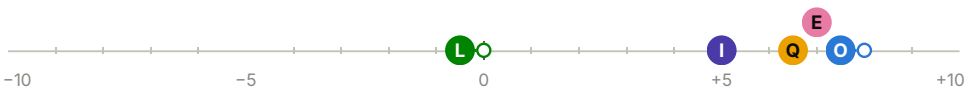

5 Lock-Step −7.5

ALL-TIME He skips school, ignores summons, once posted a sticky note saying to contact him only if someone was dying, sedated a teammate twice, concealed an artifact from his mentor, and treats breaking and entering as unremarkable. Session 15 added sleeping through make-up classes and streaming a Justice League station without asking. **Nearly all of his self-directed effort goes into his own audience.** His one off-duty contribution in Session 16 was a briefing for the newcomer that was wrong on both facts it asserted.

SESSION 17 **holds at −7.5** Both halves at once. He was the one who stopped the penalties: "*Just put it in. First off it already said further penalties.*" He also turned down the newcomer's request to train ("*We don't really practice it*"), slept in his gladiator uniform, and at the door refused to move until somebody told him the rules: "*I just like to have you know the rules and what we're supposed to do said before I engage and waste my time.*" Holds.

1.5 Personal Discipline in Combat

Session 17's fight is the shortest on record — a Marvel round and one round before the session paused — and it was a staged one-on-one bout under the hosts' thirty-second minimum.

1 Oracle +7.5

ALL-TIME He opens nearly every engagement by demanding surrender, holds actions rather than burning them, stays in position, reassesses targets on precognitive input, and heals rather than chasing kills. Session 14 was output under total neutralisation. Session 16 was the plan executed — a super-Marvel stun on the agreed target and Let's Go where it was needed — against one serious lapse: knocked out in round two, he ran straight back in at a sliver of Health.

SESSION 17 **+8.0 → +7.5 (−0.5)** He said the right thing before the bout — "*I don't plan on getting any closer*" — and his first action was the right one: Suppressive Fire on Pink-Shift for 15. Then, swapped next to Facade with his copy beside him, he made a melee attack: Melee −1, against an opponent carrying his own Point-Blank Parry. She parried it into 34 damage and a stun; his Return Fire took 15 Focus off her first. **The ranged specialist walked into his own reaction.** The second lapse in consecutive sessions.

2 Edge +7.0

ALL-TIME A complete first fight in Session 16. He named the target before contact and the plan was built around it. He shot and then moved, spent actions assisting at the moments that mattered, chose the device over a body when the device was the objective, and finished holding a door.

SESSION 17 **holds at +7.0** A disciplined six seconds. He took the opponent who chose him ("*I guess that leaves you with me, silver hair*"), blasted her twice with Lightning Actions, knocked her out, and stepped out of reach into the stands. He also declined the suggestion to cheat the pairings with area attacks ("*I know when I steal your opponent*"). His rewritten profile promises "*an absolute refusal to perform for wanton bloodsport*," and sitting down once the job was done reads as exactly that. Facade's reaction stunned him on the way. Holds.

3 Quasar-Force +6.5

ALL-TIME The best target-discriminator on the team, and his objective play from cover is textbook. The defining deduction is Session 14, when he left concealment for an artifact and one action took him from full Health to −12. Session 16 was that lesson applied: hit before he could act, he went to cover and fought from there, and a phaser found him anyway.

SESSION 17 **holds at +6.5** The right target. He took the enemy healer — the shape-shifter who had just brought Four-Fold back from −29 to 1 — and threw him out of the arena into the staging room for 28. Briar Patch's branches restrained him in reply. Holds.

4 Intrepid +5.0

ALL-TIME Willing discipline and indiscriminate tools. He takes positioning suggestions without ego and tells teammates when to take an opening. Against him: a grab that has done nothing in two sessions, and a stomp that does not distinguish a goddess from a security guard. Session 16 was his cleanest fight in three sessions: Banging Heads on the right two, Smash only with an assist behind it, and one stomp that reached only an enemy.

SESSION 17 **holds at +5.0** "*Let's go* AOEs. *Let's go*," and a few lines later, "*Just be careful because you know* AOEs *affect everyone in the area*" — the reminder he needed in Session 13, now given to others. In the bout he accepted Capricorn's challenge, took a Marvel ram for 72, got up and swung. Holds.

5 Lock-Step −0.5

ALL-TIME The record against him is severe: two Berserk episodes, teammates teleported out of combat without their consent, a blind teleport alone into a room of ten monsters, a proposed arson and a captive beaten conscious. Against it, clean combats from Session 11 onward. In Session 16 he changed the item that had defined this axis for him and asked before moving anyone: "*Who is comfortable where they are at and who wants to move a little bit.*"

SESSION 17 **0.0 → −0.5 (−0.5)** No Berserk, and a 42-point Chain Strike on the opponent who volunteered for him. Against: before the bout he proposed disguising area attacks as one-on-one — "*just pretend like you're trying to fight... 1v1, but just use* AOE" — against opponents who were playing it straight. And after his strike he teleported to the stands and drew a penalty that froze him for a turn. The log gives no reason for the penalty; *in, strike, out* is his habit, and in this arena it cost a turn.

1.6 Operational Security Discipline

1 Oracle +7.0

ALL-TIME Textbook instincts without formal training. He shut down internal discussion in front of the Destined, keeps his reporting channel clean, and treats a teammate's misconduct as something a supervisor needs to know. In Session 14 he was the only person in the room who did not say a Justice Leaguer's civilian name aloud.

SESSION 17 **holds at +7.0** In a facility with cameras in every room — bathrooms included — and in front of another universe's Titans, he gave away nothing. Holds.

2 Quasar-Force +5.5

ALL-TIME The team's most active security practitioner and one of its two largest leaks. He built the code rotation, rebuilt the drones' security, and in Session 15 built the signal mask and the teleport shield. **The leak is a habit: he answers before deciding whether the asker should have the answer.**

SESSION 17 **+6.5 → +5.5 (−1.0)** **The habit, on camera, to the opposition.** He found the hidden cameras himself and looked for implants. Then in the arena he told Earth X357's Titans:

- that he will not age — "*Guy Gardner said I'm not going to grow older anymore*";
- that his team knows a "*Ravenwing*" — Briar Patch: "*Man, you're giving away all the tells up there*";
- that "*Wonder Woman kind of gives us missions now*";
- and that "*my dad's a scientist, he works at* S.T.A.R. *Labs. He's not the crooked one that works in our building.*"

When his own team said that last one was news, he said "*I told people, I don't keep that a secret.*" The circlet stayed on, and he kept the one fact he does conceal: that the nanosuit can come off, which he lets everyone believe it cannot. **Discipline about his hardware; none about himself.**

3 Intrepid +4.0

ALL-TIME Secure by having nothing to spill and a Secret Identity to protect. In Session 15 he was streamed as the future Superman in his hero identity only.

SESSION 17 **holds at +4.0** He gave nothing and found the introductions baffling ("*I don't get it*"). Holds.

4 Edge +3.0

ALL-TIME A public identity, "*not very well known*," and no lapses in his first session; no practices on file either.

SESSION 17 **+2.5 → +3.0 (+0.5)** The first practices on file. On waking he used his senses to check whether anyone was watching. He gave Earth X357 his code name and nothing else ("*My code name is Edge. A pleasure*"). His first instinct towards the voice in the wall was distrust. Small, and all in the right direction.

5 Lock-Step −4.5

ALL-TIME Personally the hardest member to trace and institutionally the most corrosive: a concealed artifact, "*Nightwing can't be trusted*," team decisions routed around. **Session 15 was the largest single-axis fall in the document's history (−5.0)**: a livestream of the Watchtower, a broadcast surveillance operation, his real name confirmed by text to an unknown sender, a telepath invited into his memories. Session 16 broadcast nothing.

SESSION 17 **holds at −4.5** One lapse and two good instincts in five minutes. The lapse: "*Actually, you know, you could call me Eric. It's not like we'll ever meet again*," said on camera to a team with a power copier in it. The instincts: he phased his hand through Facade's rather than touch it ("*I can't trust nobody*"), and she turned out to copy powers; and asked whether his powers were good, he said "*Oh, no, they're horrible*," a reflex he explained to himself as learned from facing too many power thieves. Holds.

1.7 Civilian Life Stability & Maintenance Load

How stable the non-hero life is, and how much overhead it imposes. High = stable and low-maintenance.

1 Intrepid +6.0

ALL-TIME Secret Identity, school, and nothing else on the board. The absence of complications is the entire score, and he has held first since Exemplar II left.

SESSION 17 **holds at +6.0** Nothing touched it. If the hosts keep their promise, no time passed at home.

2 Oracle +3.5

ALL-TIME Stable inside the tower and structurally unable to live a normal civilian life outside it. **Extreme Appearance means he cannot walk into a shop unremarked**, and the roster records his civilian identity as *lapsed.*

SESSION 17 **holds at +3.5** Nothing changed.

3 Edge +1.5

ALL-TIME A public identity with low recognition, a school record that was poor before the powers arrived, and a visibly changed body. He lives at the tower, in Exemplar II's old room, and nothing on file describes his family. **Positive because there is still a civilian life to protect; low because almost nothing about it has been described.**

SESSION 17 **holds at +1.5** The roster now calls him "*a soft-spoken teenager*," and his civilian life is still undescribed. The one new fact is a maintenance load that travels with him — the concentration practice. Holds.

4 Quasar-Force −1.0

ALL-TIME Publicly identified, with parents at a known address in Slate Hill, a family in court-adjacent therapy, a personal maintenance load nobody else carries, and OOC ageing that has stopped.

SESSION 17 **holds at −1.0** He told another universe where his father works. Nothing reached Slate Hill. Holds.

5 Lock-Step −3.5

ALL-TIME No parents, no fixed address and a truancy record he keeps adding to, filled with dates and parties rather than anything load-bearing. **The instability is the thing he says he is glad about.** The weekly stipend is the one structure he asked for; Session 15 added a surname, a named best friend and a public channel.

SESSION 17 **holds at −3.5** Asked how he prepares for a fight, he said the call usually finds him "*out doing somewhere, maybe a family barbecue or you know, hanging out with my friends.*" VOLATILE A family barbecue is a new item in the file of an orphan who says he has no parents. Unexplained, and not scored.

1.8 Adult / Guardian / Peer Support & Safety Net

1 Quasar-Force +9.5

ALL-TIME By a wide margin the best-supported person on the team. He has two engaged parents, a family therapy arc, a father at STAR Labs, Nightwing watching since before he had a codename, Guy Gardner, and Oracle as an unappointed guardian. Session 14 added Iron-Side's surgery, Wonder Woman's personal sanctuary offer and Doctor Taleria; Session 15, a founder who came in person when called and a Green Lantern who picked up mid-fight. **He is the only member for whom the League's support is personal rather than institutional.**

SESSION 17 **holds at +9.5** The network did not change, and **for the first time none of it could be reached.** Guy Gardner's communicator said "*The dimension you're trying to reach is currently unavailable*" three times, and Lock-Step chose that moment to tell him Guy had "*left you on red.*" His answer — "*He really cares about the creepozoids. I think he would maybe even bring a bunch of his friends over too*" — is a fourteen-year-old's faith in his safety net, intact. This axis scores the net, not the signal. Holds.

2 Edge +7.0

ALL-TIME He arrived with a support network nobody else on the team brought. Black Canary volunteered to train him because his power is dangerous, and Nightwing, operating as Batman, recruited him personally and briefed him on the villains before his first fight. His family is not described.

SESSION 17 **+6.5 → +7.0 (+0.5)** FLAG CLOSED The roster now tags him *Mentor (Oracle / Barbara Gordon)* alongside *Mentor (Black Canary)*. The Oracle who found him online, investigated his origin and called in the Birds was Barbara Gordon. **Two named mentors from the Bat-family's orbit is a net nobody else arrived with.** Like everyone's, it was out of reach this session.

3 Oracle +5.0

ALL-TIME Nightwing is a mentor he actually uses and the one most often absent; STAR Labs is an institutional origin. League hospitality and Taleria's interest raised the score in Session 14. In Session 15 he said it first: "*It's no different than Nightwing.*" **He is used to being the one who looks after people**, and in Session 16 his support was his team.

SESSION 17 **holds at +5.0** His support was the team again, and it was attentive. Edge brought food "*especially to Oracle since he's recovering*," and Intrepid said "*Oracle definitely needs rest.*" His own view of the adults above him dropped ("*most of the people telling us what to do don't know what they're doing*"), which is scored in 1.3 and §9 rather than here. Holds.

4 Intrepid +3.5

ALL-TIME Nightwing, and a Secret Identity that implies an intact civilian family, with no detail on either. The one time he asked for something, in Session 14, a teammate called him a coward until he changed his mind.

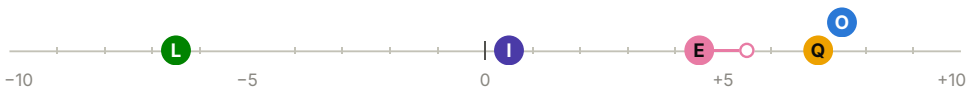

SESSION 17 **holds at +3.5** Nothing changed.

5 Lock-Step −3.5

ALL-TIME An orphan who volunteers that he is glad he has no parents. He distrusts Iron-Side and Nightwing and keeps his confidence for Zatanna, who is not present. **Since Session 13, adults he distrusts have kept acting in his interest anyway.** Session 15 brought a ring and the first question he asked Iron-Side; Session 16 brought the clearest statement of need he has made ("*Adults being adults and actually being helpful*") and the first time he settled a question in the field by citing an adult — Nightwing.

SESSION 17 **holds at −3.5** Two new names on his list, neither reachable. The Grey Lantern became "*my mentor technically now*" — the first time he has called anyone in that order a mentor — and he apologised to Guy Gardner in absentia ("*If it is, I'm sorry*"). Against: "*another failed adult*," and another universe's verdict, "*yeah, pretty useless.*" Holds.

1.9 Emotional Regulation / Impulse Control

1 Oracle +7.5

ALL-TIME He has held lines twice against the most socially dominant person on the team without escalating, and rations healing by arithmetic while people bleed. Session 14 was regulation under helplessness; in Session 15 he was talked over on a stream without rising to it; in Session 16 he was knocked out and his only line was a joke at his own expense.

SESSION 17 **holds at +7.5** Outplayed and stunned by a copy of himself, his only recorded reaction was the useful one: "*Don't shoot that other Oracle. Okay, don't do it.*" Holds.

2 Quasar-Force +7.0

ALL-TIME Regulated to a degree that would be impressive in an adult, and part of the reason is that the box damps his panic-fear and anger. **That is regulation and outsourcing at once, and this axis scores the outcome.** His deficit is attentional rather than emotional.

SESSION 17 **holds at +7.0** The attentional deficit cost a penalty (1.4). Emotionally he was the calmest member of the bunk room — he woke and immediately answered the question everyone was asking — and he failed only at regulating someone else, the box. Holds.

3 Edge +4.5

ALL-TIME Calm, dry and polite through a Session 16 briefing delivered mostly as complaint ("*Ok, that told me nothing*"), and no recorded flinch across 102 damage. The one deliberate display was a weaponised one — he "*uses his monstrousness to intimidate*" — and the risk this axis watches is the same part of him used once and not on purpose.

SESSION 17 **+5.5 → +4.5 (−1.0)** Three impulse items in one session, none of them the frightening kind.

- **The punch.** Lock-Step asked to be punched to find out whether he was dreaming. Quasar-Force tapped him and Intrepid refused. Edge said "*Hey, you wanna have a little fun with Jeffy then? I can punch you*" and threw a full combat punch for 15, taking a teammate who had woken from −24 nearly back to zero.
- **The door.** "*Get your ass back here!*" and then "*I give up, I completely give up.*"
- **The arena.** Hysterical laughter at an opponent's name ("*The name sucks*"), and an apology when Lock-Step said "*That's not nice.*"

The restraint his whole profile is built on held where it mattered — the power — and slipped where it didn't.

4 Intrepid +0.5

ALL-TIME He voices his fear of losing control during fights, and the Session 10 ladder is impulse management sliding downhill in one monologue. Session 14 added four reversals and an escalated jab; Session 15, enthusiasm ahead of information; Session 16, a ram he thought about and did not make.

SESSION 17 **holds at +0.5** Frustration in words — "*I give up too... Screw it*" — and restraint in deeds: "*I'm not punching you.*" Holds.

5 Lock-Step −6.5

ALL-TIME **Berserk is loss of impulse control rendered as a game mechanic.** Around it sit sedating a teammate on impulse, beating a captive conscious and proposing arson. The violent impulses have stayed down in recent fights; the social ones have not, and Session 16 opened with an unprompted grievance delivered to a stranger.

SESSION 17 **holds at −6.5** The social impulses, without the violent ones: "*Somebody punch me*," "*Oh fuck*," the speech about adults on hearing a name he did not know, cutting the arena announcer off mid-sentence, and the argument at the door that ran out the penalty clock. He also said the steadiest thing anyone said about the maze: "*Do you want me to try to direct you in a maze? Come on. Let's just be honest there. That is not me. That's an Oracle thing.*" Holds.

1.10 Moral Agency / Ethical Independence

Capacity for independent ethical judgement, as against deference and obedience. High = reasons from his own principles and acts on them.

1 Oracle +8.5

ALL-TIME **The clearest demonstrated moral agency on the team.** He refused to drug Quasar-Force when asked by the team's most socially powerful member, objected aloud to the prisoner humiliation, called Nightwing about the artifact knowing the cost, and refused Psyche's offer from inside his own head. In Session 15 he changed his mind about the progenitor on the evidence. NOTE He was present for the Day 56 planning in which two teammates arranged a lethal outcome by proxy, raised no objection, and in Session 16 sat through two passing references to it in silence.

SESSION 17 **+9.0 → +8.5 (−0.5)** **The question this document carried for two revisions was put to the room by somebody else, and his answer was deference.** Edge asked whether a villain team killing people was "*kind of our problem too.*" Lock-Step defended the errand; Quasar-Force predicted the Destined would "*kill every man and woman in that lab.*" Oracle's one contribution vouched for Lock-Step: "*You haven't been with us long enough... There was a time I doubted Lockstep, and he's preaching the gospel.*" That line answered Edge's doubt about the League, not his question about the killing, and to the killing Oracle said nothing, twice. Against it, independent judgement of another kind: "*Hey, let's not fight at all. See what they do,*" and "*Why don't we all just bust out of here together.*" Still first, by half a point.

2 Quasar-Force +8.0

ALL-TIME He reasons from an articulated frame rather than from instruction. He defended the box's personhood against the only qualified person in the room, asserted himself four times in Session 15, and moved, on his own reasoning, toward lethal force by proxy. In Session 16 he corrected the dominant teammate on the record and defended the absent adults.

SESSION 17 **holds at +8.0** Independent in both directions. He defended the errand on his own reasoning ("*we needed to save the world and we were short on hands*") and named what it costs ("*I think we're compromising on the killing*"). In the arena he set a standard nobody gave him — "*I think we should be honorable, at least to them. I don't think our little hosts here care*" — and asked the question that separates rules from rulers: "*Are you talking about Nightwing's rules or the rules of the sport?*" Agency is not direction. Holds.

3 Edge +7.0

ALL-TIME In Session 16 the evidence of independent judgement was tactical: the case for Argent first, made on his own reasoning, and the cynicism he was offered on arrival, declined. The backstory's one moral fact is a choice — when his power appeared, he went looking for someone to teach him restraint.

SESSION 17 **+4.0 → +7.0 (+3.0)** **The first Titan to object to the Destined errand on the record — on the day he joined, against three teammates.** "*I have this question hanging around in my head since before we entered that warehouse... if they're really killing people that's kind of our problem too right?*" He pressed it three times:

- "*Wait, just a second, man.*"
- "*it was pretty wild what you say: that sending a team of murder hoboes.*"
- "*if you kill the progenitor, what happened with that people?*"

He also refused the premise that the League would put them in that position. Then he gave the room a principle: "*We follow the rule when it's easy and when it's hard. Otherwise, it's not a rule, it's a mood.*" **The largest single move on any §1 axis this revision.**

4 Lock-Step +6.0

ALL-TIME Maximum independence: he acts on his own judgement and defers to nobody. His Session 13 position on adults sending children into world-ending situations was vindicated in Session 14, and he wrote the team's only mission-vetting proposal. In Session 15 he abandoned his own stated principle under a clock ("*we don't have the time to be democratic*"), which caps the score; in Session 16 he set the warehouse rule by citing Nightwing.

SESSION 17 **holds at +6.0** Independent to the end of the argument. The utilitarian case is his own — "*we can either save and protect our righteousness or actually save people's lives... We don't have that moral high ground or the strength.*" So is the concession for the arena: "*I'm hearing it... this is light work, we're following the rules.*" Holds.

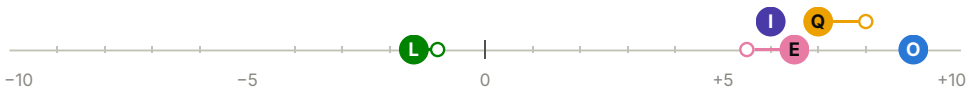

5 Intrepid +2.0

ALL-TIME "*Will go with any team decision*" — and in Session 14 he went with it and then argued there had been nothing else to go with. Session 15: "*I'm not really a thinker.*" Session 16 brought the first judgement he exercised against a teammate's offer and kept: he refused to be teleported clear.

SESSION 17 **holds at +2.0** Two items cancel. "*That's just exploitation*" is the first unprompted moral judgement on his file about anything other than himself. "*If the powers that be tell us we lost, then we lost*" is deference to the people holding him prisoner. On the errand: "*I get what you're saying.*" Holds.

1.11 Morality / Moral Alignment

Not judgement or discipline — simply how good this person is.

1 Oracle +9.0

ALL-TIME He heals people who were trying to kill him minutes earlier, demands surrender before every engagement, attempted to revive a man he had no reason to save, and refuses to take part in cruelty, out loud. In Session 15 his instinct about a predator was elimination and his conclusion, reached by listening, was relocation; in Session 16 every point of damage he dealt was Focus damage.

SESSION 17 **holds at +9.0** He spent the battery on the two teammates who could not get up on their own, and his stated aim for the arena was the most humane line spoken there: "*I just want to get through this and all of us turn out without anybody getting hurt.*" His silence on the errand is scored in 1.10 and 1.12 — agency and line-holding — not here. Holds.

2 Quasar-Force +7.0

ALL-TIME He treats captured enemies as people, pulled bodies out of a gassed room, gave a statement against his own interest, and took a knife through the abdomen for a nation he has never visited. **The fatality on his record was an accident he has never tried to minimise**, and his stated rule is to kill only against lethal intent that cannot otherwise be stopped. Against it, two sentences: Session 15's "*we would be more comfortable unleashing Fade-Out with his full lethal fury on the controller,*" and Session 16's "*We sent the murder hobos after the bad progenitor.*"

SESSION 17 **+8.0 → +7.0 (−1.0)** **The line moved in words again, and further.** "*One thing I'm very confident on is that the destined will kill every man and woman in that lab, whether the progenitor is there or not*" — and in the same conversation, "*we needed to save the world and we were short on hands. And the other progenitor is probably the perfect person to send these murder hobos after.*" That is foreknowledge of the deaths of people who are not the target, accepted as the cost. What keeps the fall to a point: he named it as a compromise ("*I think we're compromising on the killing*"), and in the arena he asked for honour towards the opponents and offered his own one friendship ("*Well, we can be friends!*"). Still second.

3 Edge +6.5

ALL-TIME The first recorded use of his power was protective: an attacker's weapon sliced apart during an assault. His first fight was spent taking a mind-controller off the board, shooting a device out of a villain's hand, and holding off Blitzkrieg alone so the others could be got out. VOLATILE The roster's legend is that what he was "*cut down armies.*"

SESSION 17 **+5.5 → +6.5 (+1.0)** Concern for people the team was not responsible for: the lab staff the Destined might kill, and the infected the team might strand ("*if you kill the progenitor, what happened with that people?*"). He fed a room of people who were "*pretty down,*" and in the arena he knocked out his opponent and sat down rather than keep hitting. Against it, the punch. **The person in the room still uses a lethal power for protective ends, and is now the team's loudest voice against killing.**

4 Intrepid +6.0

ALL-TIME Straightforwardly decent. He takes hits meant for softer people, is afraid of hurting anyone, and said his reason for going to the Watchtower was "*I'm just going to protect you guys.*" He sits below the top of the table only because his goodness is passive.

SESSION 17 **holds at +6.0** "*That's just exploitation,*" "*I'm not punching you,*" and before the bout the one note of caution: "*They might be bad guys in that world.*" Holds.

5 Lock-Step −1.5

ALL-TIME Genuinely split rather than simply bad. **For:** handcuffs offered first, bloodless captures, a bank's worth of hostages teleported clear, the Session 14 heal, a species saved on Kwa, and in Session 16 five infected teenagers he insisted be knocked out rather than hurt. **Against:** a fourteen-year-old teammate sedated twice, a restrained prisoner humiliated, consent treated as a formality, five released teenagers shamed on camera, and a detainee's death commissioned so the Titans could "*keep our hands clean.*" **People when they are human; not when they are not.**

SESSION 17 **−1.0 → −1.5 (−0.5)** **The errand became doctrine, told to a recruit.** "*Deaths we're not worried about right now. We're trying to save the world first. And then we can worry about the deaths later,*" and "*we can either save and protect our righteousness or actually save people's lives.*" For the fight in front of him he set the opposite rule — "*if we don't have to, we should always try to not, you know, be lethal,*" and in the arena "*nobody kills each other*" — and added, of Nightwing's rule, "*I think here's exceptions.*" For: he stayed with a frozen fourteen-year-old rather than leave him alone ("*I just don't feel comfortable leaving our youngest*"). The shape is unchanged — people when they are in front of him, a policy when they are not — and the policy is now stated.

1.12 Line-Holding Under Duress

Not what they believe — what survives contact with pressure.

1 Oracle +8.5

ALL-TIME Four documented holds against four kinds of pressure — peer (the sedation request), group (the humiliation), loyalty (the call to Nightwing) and compassion (Psyche, inside his head). He has never folded. Since Session 15 one open question: no objection when two teammates arranged a lethal outcome by proxy.

SESSION 17 **+9.0 → +8.5 (−0.5)** **The open question became a scored one.** For two revisions the item was silence in a room where nobody pressed the line. In Session 17 somebody did — the newcomer, twice — and Oracle did not take the line up; he backed the teammate who had crossed it. That is not folding under pressure. It is not holding a line somebody handed him. Still first.

2 Quasar-Force +7.0

ALL-TIME He recited the conduct standard from memory, held his position against a Lex-Corp attorney, and held against expertise on the box's personhood. **What he does not do is convert holding a line into imposing one.** Session 15 had two holds against a teammate and one shift: his line on force moved under a 24-hour clock to lethal action by proxy, and it has stayed there.

SESSION 17 **holds at +7.0** He held — the moved line. Pressed by Edge, he did not move back toward his own rule ("*only kill if they are trying to kill you*"); he defended the errand. In the arena he held a line of his own against the de facto leader's suggestion of disguised area attacks: "*I think we should be honorable, at least to them.*" Holds.

3 Edge +6.0

ALL-TIME In Session 16 his physical line held — knocked to zero, up again, holding Blitzkrieg off alone — and no moral line was pressured. Restraint, the value his profile is built on, was not tested against a reason to drop it.

SESSION 17 **+3.0 → +6.0 (+3.0)** **Tested on the day he joined, by three teammates, and held.** The de facto leader, the team's intelligence and the team's medic gave him between them the whole case for the errand: the stakes, the League, the shortage of hands. He kept saying the same thing until it became a rule for the arena that Lock-Step accepted: "*I'm hearing what you're saying.*" One reversal sits in the file too, and it was the right kind: from refusing the hosts' instructions to following them once there was nothing to gain by refusing.

4 Intrepid +4.0

ALL-TIME None of his lines was tested until Session 14, and then one broke four times in a single conversation under one teammate's single word. In Session 16 he held the first line on his file against the same teammate: offered an exit under fire, he refused it.

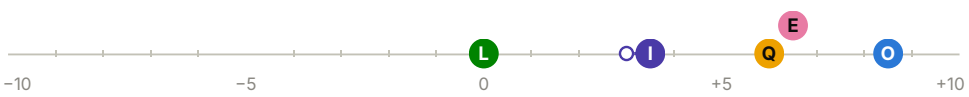

SESSION 17 **+3.5 → +4.0 (+0.5)** The second held line against the same teammate, and this time it was about where the team went, not about himself. When the door opened and Lock-Step stayed with the frozen Quasar-Force, Intrepid argued — "*I'm going where I'm supposed to go*," "*It's a penalty!*" — and went on, and the newcomer went with him. Earlier he had refused Lock-Step's request to be punched.

5 Lock-Step −4.0

ALL-TIME **He has been the pressure the others hold against** — the sedation, the humiliation, the concealment and the non-consensual extractions were all his initiative. Session 15 gave him the first hold not in his own favour, on Kwa, and then the collapse in its most literal form: "*No, I'm not coming around on lethal force*" in the room, and "*cinder blocks in the ocean*" in private. In Session 16 he held the non-lethal line for the warehouse.

SESSION 17 **holds at −4.0** He held his position against the newcomer — the errand stands — and accepted the newcomer's rule for the arena. Neither is a line surviving pressure in this axis's sense; the Session 15 collapse is now policy. Holds.

1.13 Judgment Under Stress

1 Oracle +8.5

ALL-TIME He retargets mid-action on precognitive input, holds rather than burns actions, and made the coldest correct call of the campaign in Session 9. In Session 14 he made the failure call nobody else wanted to make; in Session 15 he turned a failed Logic check into a structured forecast. In Session 16 he supplied the plan after saying there wasn't one, and moved Let's Go to the one teammate who could teleport, so the extraction happened.

SESSION 17 **holds at +8.5** Good calls and bad ones, and the good ones were bigger.

- **Good:** heal the two members without healing factors first; ask whether Lock-Step can teleport them out; consult Intuition before the bout and find the copier; and hang back at the door, "*knowing the team wasted most of the penalty time arguing*," so that Quasar-Force had someone to catch up with.
- **Bad:** "*I think the odds are 100%*" that the other team was the Destined (it was not), and the melee swing at his copy (1.5).

Holds.

2 Edge +6.5

ALL-TIME The best tactical read in the Session 16 pre-fight conversation came from the person who had been on the team for ten minutes: take the mind-controller first, because she "*can turn 5 vs 5 into 6 vs 4.*" Under fire he picked targets by threat and chose the device over a body when the device was the objective.

SESSION 17 **holds at +6.5** His reads were again the most accurate in the room. The captors were "*not entirely hostile because we wake up on beds and we don't seem to be under the same control*" as the five teenagers. Lock-Step's worst cases were "*a lot of assumptions*," and they were wrong. His method was "*one problem at a time.*" Against it, the punch, and a bout he took himself out of after one turn. Holds.

3 Quasar-Force +6.0

ALL-TIME His read of what matters is often the best in the room; his read of what it will cost has failed twice on the record, worst in Session 14. Session 16's deductions were good, and the villains had a plan for him that he did not have for them.

SESSION 17 **holds at +6.0** Two good deductions: "*If we did get nabbed by these arena press gangers, we may not actually have parasites on us*," and the camera-and-implant sweep that found the nullifiers. One costly impulse: the penalty. One excellent bout decision: remove the enemy healer from the arena. Holds.

4 Intrepid +3.5

ALL-TIME He takes positioning guidance well and has visibly improved, and he still committed a full action to a grab on a target whose force field had already beaten a whip, and still stomps rooms with ordinary humans in them. In Session 15 he called for an attack before any facts were in.

SESSION 17 **+3.0 → +3.5 (+0.5)** The best deduction on his record, made mid-argument: "*Quasar-Force is taking his penalty, which means time is a factor in this competition.*" He reasoned about the maze before he saw it ("*what if we're in a maze, and if we don't get to certain points...*") and corrected himself on area attacks. Against it: "*if the powers that be tell us we lost, then we lost.*"

5 Lock-Step 0.0

ALL-TIME The old record — the blind teleport into ten monsters, the arson proposal, the captive beaten conscious, Berserk — has been climbing toward zero. The Session 14 healing hex was a cold, correct call; Session 15 held the best judgement sequence of his campaign, on Kwa, and then the Destined. Session 16 was sound in action, with a pre-fight briefing that was wrong on both facts.

SESSION 17 **holds at 0.0** A split ledger again.

- **For:** "*Just put it in*" (it stopped the penalties); the phased handshake with a stranger who turned out to copy powers; "*they're horrible*"; and the television gambit, which got both teams a look at each other.
- **Against:** two worst-case forecasts, both wrong (the Destined, and "*the others that we just failed capturing*"); the refusal to leave the barracks until the rules were stated, the argument that "*wasted most of the penalty time*"; his real first name; and a penalty for retreating to the stands.

Holds.

1.14 Heroism

NEW AXIS *Added at Session 17. The willingness to take a risk or pay a cost for someone else — the public, a teammate, or an enemy. Scored on what was chosen and paid, not on what a power set makes cheap; the capability to protect is 4.19. Scored as valence: +10 = repeatedly risks and spends himself for teammates, bystanders and opponents alike, and never leaves anyone behind; 0 = nothing for or against; −10 = endangers or sacrifices others to spare himself. The Session 16 figures are a retroactive baseline, scored on the record through Session 16 with the retcon applied.*

1 Oracle +7.5

ALL-TIME **The only file on the team with heroism in all three directions.** Teammates: he revived Quasar-Force in Session 1, resisted Lock-Step's teleport in Session 10, "*not wanting to leave without the others*," and in Session 16 came up from −2 and ran back into the warehouse — "*Drop me again, it was worth it.*" The public: he stayed back to cover Sarah in Session 8, and in Session 12 interposed at the Celestial Core and took heavy damage to keep its force field up. Enemies: in Session 7 he finished dragging an unconscious Dargrave assistant out of a room filling with chemicals and hit the decontamination; in Session 8 he revived the man Intrepid had knocked out. Two things hold him below the ceiling: prudence ("*I'm willing to help, but I'm not being the one charging*") and, since Session 15, silence while the Destined errand was arranged.

SESSION 17 **+8.0 → +7.5 (−0.5)** For: he emptied the battery on the two teammates without healing factors before anyone knew where they were ("*My battery's about gone now*"), hung back at the door so the frozen Quasar-Force had someone to catch up with, and set the most protective aim in the arena. Against: after the newcomer asked whether the killing was their problem, and Quasar-Force had counted the lab staff's deaths, Edge doubted that the League had really put saving the world on them, and Oracle vouched for the errand's author: "*he's preaching the gospel.*" He was backing the Justice League's stakes rather than the Destined, but to the killing he said nothing, and he did not speak for the people in that lab. The heal is his usual role; the vouching is new evidence on this axis's open question, and it outweighs the heal by half a point. Still first.

2 Intrepid +7.0

ALL-TIME **His heroism is his body between harm and someone softer, offered without being asked.** He held the bank vault against Hijinx in Session 4; in Session 8 he broke out of the webbing and moved in front of the paralysed Quasar-Force; in Session 12 he interposed for Doctor Varga; on Kwa he offered "*You could always use my body as a shield*"; and in Session 16 he refused Lock-Step's exit and fought on until a 60-point marvel put him at −49. Toward enemies his record is restraint born of fear of his own strength, and for the controlled teenagers, "*they were victims.*" What is scored is the choice to step in, not the Health that makes it survivable. He sits below Oracle because nearly all of it runs in one direction.

SESSION 17 **holds at +7.0** He walked the stepping puzzle three times under the orbs (Lock-Step's last step finished it); went first into the colosseum; and took Capricorn's ram for 72 when asked ("*Yep, sure thing*"). Against: "*I get what you're saying*" to Lock-Step's doctrine — an acknowledgement, not an endorsement — and walking on at the door while the frozen Quasar-Force stayed behind with two teammates. Holds.

3 Edge +5.5

ALL-TIME One session long through Session 16, and that session was spent on threats to his teammates. He argued to take the mind-controller down first, was knocked to exactly 0 and got back up to face Blitzkrieg, and — in the part of the ending the retcon kept — "*manages to hold off Blitzkrieg for a round, allowing Lock-Step to get Oracle and Quasar-Force out.*" **That rear guard is the clearest act on the Session 16 record of risking himself so others could escape.** No debits, and no evidence yet toward the public or toward enemies. Provisional.

SESSION 17 **+5.0 → +5.5 (+0.5)** **The only Titan who spoke for the people the errand would kill.** "*If they're really killing people that's kind of our problem too right?*" — and for the infected, "*if you kill the progenitor, what happened with that people?*" — pressed against three veterans on the day he joined, and turned into a rule the de facto leader accepted for the arena. It cost him standing, not safety, so the move is half a point. Against: a full combat punch into a teammate just up from −24 (who had asked for it); "*Enter when you can*" to the frozen Quasar-Force before walking on; and two opening blasts (the second a Marvel for 86) that put Four-Fold to −29 in a staged bout, after which he sat down in the stands.

4 Quasar-Force +3.5

ALL-TIME A real heroic record, mostly at moderate personal risk and kind to enemies in person. In Session 3 his barrier stopped Fade-Out's murders of the Burnout Kings and he "*made himself a target*"; in Session 7 he pulled an unconscious enemy out of the gassed lab; in Session 13 he moved the controlled Star Heart away from the Breeder and cut Doctor Varga free; in Session 14 he "*moves out of his safe space*" to take the Sphere and was stabbed to −12. On Kwa he argued that a non-predatory species should not be hunted. Against: he fights from cover while others take the hits, and since Session 15 he has endorsed killing by proxy — "*full lethal fury*," then "*murder hobos.*" **The boy who shielded Fade-Out's victims endorsed sending Fade-Out.**

SESSION 17 **+4.5 → +3.5 (−1.0)** **The endorsement became acceptance of bystander deaths.** "*The destined will kill every man and woman in that lab, whether the progenitor is there or not*" — the obvious cost, stated plainly — followed by a defence of the errand: "*we needed to save the world and we were short on hands.*" Seeing the cost to people who are not the target and backing the plan anyway is the opposite of what this axis measures. Naming it a compromise keeps the drop to a point; honour and an offered friendship in a staged bout buy nothing back.

5 Lock-Step +3.0

ALL-TIME **The campaign's most courageous rescuer and the author of its worst anti-heroic act.** For: he teleported into the Session 2 ritual "*ignoring the whole argument*"; teleported the bank's hostages out in Session 4; went into a room of armed kidnappers for Sarah in Session 8; went back into Omega Grade's lab for Oracle and Exemplar in Session 10; and at the end of Session 16 got Oracle and Quasar-Force out, then went back for Edge, and for Intrepid "*using just about the last of his focus.*" Against: the Destined commissioned to kill a detainee so the Titans could "*keep our hands clean*," a restrained captive humiliated, and a fourteen-year-old teammate sedated twice. **He goes into more danger for more people than anyone on the team; his debits are acts, not words, which is why he is last.**

SESSION 17 **+3.5 → +3.0 (−0.5)** Against: the commission became doctrine, delivered to the recruit who asked about the people it would kill — "*deaths we're not worried about right now.*" For: at the door he stayed with the frozen youngest in case someone "*found Quasar-Force while he can't move*" ("*I just don't feel comfortable leaving our youngest*"), and in the arena he set the no-kill rule for both teams. The stay is real but cheap; the doctrine is about real lives.

1.15 Justice League Vetting — Character & Conduct

Character side only; capability is 7.4. Scored as valence: +10 = would clear vetting and be championed by whoever sponsored him; 0 = nothing for or against; −10 = the record is disqualifying and reflects badly on the team that put him forward.

1 Oracle +8.0

ALL-TIME Exactly the profile a senior organisation wants. He reports honestly, defers to legitimate authority, refuses unethical instructions from peers, prioritises life over victory, and has generated no incident in seventeen sessions. **Session 14 added the entry a panel values most and sees least: he made the failure call himself.** Since Session 15, one line a panel would mark for follow-up: his silence on the Destined errand.

SESSION 17 **+8.5 → +8.0 (−0.5)** A panel would find the follow-up already answered. The newcomer asked the question a panel would ask, and the candidate vouched for the teammate who designed the errand. A panel would also read "*most of the people telling us what to do don't know what they're doing.*" That is not misconduct; it is the one sentence on his file a sponsor would want to discuss before forwarding it. Still first, by two and a half points.

2 Edge +5.5

ALL-TIME Clean conduct, a League-adjacent sponsor in Black Canary, and a recruiter who wore the cowl to recruit him. The question a panel would ask first is the legend — that he is a reborn weapon that cut down armies.

SESSION 17 **+3.5 → +5.5 (+2.0)** **The page a panel reads first is now his objection.** On the day he joined he told the team a commissioned killing was "*kind of our problem too*," and turned it into "*We follow the rule when it's easy and when it's hard.*" That recruit is the profile a vetting officer is looking for. Two sponsors now (Black Canary and Barbara Gordon), one punch thrown at a teammate who asked for it, and the legend still unexamined. **He passes Quasar-Force.**

3 Quasar-Force +3.5

ALL-TIME His conduct would genuinely impress a panel: voluntary police cooperation, unprompted intelligence sharing, evidence discipline and an exemplary stay as the League's guest. **He is held below the top by an open fatality investigation**, and since Session 15 by a sentence no vetting officer reads past: a fourteen-year-old endorsing Fade-Out's "*full lethal fury*," repeated as "*murder hobos*" in Session 16.

SESSION 17 **+4.0 → +3.5 (−0.5)** "*One thing I'm very confident on is that the destined will kill every man and woman in that lab*" — said while defending the decision. The leaks to Earth X357 would be in the file too. For: the toss that took the opposing healer out of a staged bout without much hurting him, and honour stated as a standard.

4 Intrepid +2.0

ALL-TIME Clean, obedient and uncomplicated. A panel reading Session 14 would find a candidate who argued, in front of the sponsoring Justice Leaguer, that more information would not have helped. **That is not misconduct; it is a candidate talking himself down in the interview.** "*Not yet anyway*" is the counterweight.

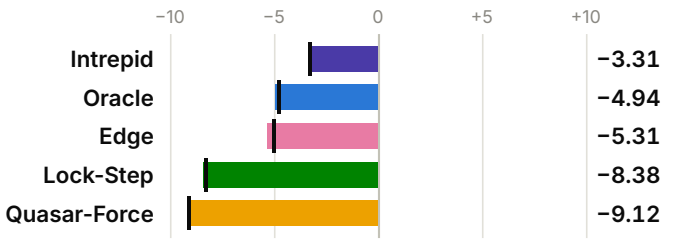

SESSION 17 **holds at +2.0** Nothing a panel would weigh, unless it counted that he called the arena exploitation.

5 Lock-Step −9.0

ALL-TIME **The one file that is actively worse than no file.** Doctor Fate has publicly declared him a danger to the world. Beneath that: the sedations, the humiliated captive, the concealed artifact, two Berserk episodes and Session 14's lasso. Session 15 put a species saved and a station livestreamed beside a killing solicited through a villain team. Session 16 added his best combat-conduct page, which a panel would read after the solicitation.

SESSION 17 **−8.5 → −9.0 (−0.5)** **The solicitation now has a rationale, delivered to a recruit.** A panel would read "*deaths we're not worried about right now*" and "*we don't have that moral high ground*" as the candidate's own account of why the killing was commissioned. The spread on this axis stays at 17.0, the widest in the document.

§2 Enemy Risk

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

NOTE **Session 17 is the first session in which the whole team was taken.** A party nobody on the team had heard of — the producers of "*arena ball*," acting on the nomination of "*Minji Lin aka Firefly aka the tiny terror aka Death from Nowhere*" — lifted all five out of Blüdhaven at the moment they were weakest. It held them in a pocket dimension with cameras in every room, bathrooms included, and banks of power nullifiers in the walls and floors, and it enforced its rules by freezing people in place. Session 16 ended with the brood announcing that its orders had changed to "*collecting*" the team; Session 17 began with somebody else doing it. VOLATILE Whether the two are connected is unknown. The arena took the team as a unit, so it is scored once, in 2.2, as a half point of exposure on every member not already at the floor.

2.1 Vulnerability to Outside Subversion

(Position 1 = most vulnerable.)

1 Lock-Step −10.0

ALL-TIME The only member with a **confirmed, completed hostile operation** run against him: a temporal artifact purpose-built to lure him, profile him, transmit his data to an unknown recipient and brick itself. Around it sit the recruitment attempts, the three-way pull between Doctor Fate, Zatanna and Constantine, the Chaotic / Supernatural / Hounded tags, and a power source that may have been made from a piece of him. **Session 15 opened every front at once**: the progenitor entered his mind past the Protection Hex and read his memories with his consent, a cosmic order put a ring on him he cannot charge, and the Destined and Fade-Out came away holding a debt and his private request to have a detainee killed. Session 16 found a second device keyed to his time manipulation in the same mob warehouse.

SESSION 17 **holds at −10.0 (the floor)** A new party took him with everyone else, and he gave it his first name. He also put the Grey Lantern's claim on him into his own words for the first time: "*Remember that Grey Lantern?, my mentor technically now.*" Nothing was closed.

2 Quasar-Force −9.5

ALL-TIME The strongest structural case in the document. An alien intelligence with a damaged personality, residual Apokoliptian corruption, its own survival drive and its own agenda lives inside his central nervous system and cannot be removed without killing him. Session 14 gave the threat a face, Azimuth. Session 15 answered two of three findings in hardware — the circlet masks the signal Azimuth's search depends on, and Uncanny 3 raises every mental defence — and the Grey Lantern's verdict was "*no longer merely human.*" Session 16 gave the hardware its first hostile test, and it held: a power thief's Swipe failed against his fortified mind. **What remains is the manner: he answers whoever asks politely.**

SESSION 17 **holds at −9.5** Both halves of the case grew, and neither reaches the floor, which this axis keeps for operations already underway.

- **The manner.** He answered every question Earth X357 asked and several nobody asked (1.6).
- **The box.** Cut off from the Source in an isolated dimension and frightened, she spelled out "*I will find a way. Source—no! No! No—*" before "*Help.*"

An alien intelligence that badly wants something is easier to bargain with than one that is content, and the people who run this dimension control the way out. VOLATILE

3 Oracle −7.5

ALL-TIME His cybernetics are a STAR Labs product he did not build and cannot fully audit — *Bio-Symbiotic Mutation Core, Host 'WADE' — Initiated & Maintaining*: the language of a relationship, not a prosthesis. In Session 12 something wrote into his predictive module and his own diagnostics reported no intrusion; **the channel has never been fixed.** His Ego defence of 10 is the softest door on the roster, and in Session 15 a telepath read his intent without any recorded defence. The module "*did not adapt well*" to temporal transport and now resonates with Lock-Step's time-altering powers. What protects him is character: no divided loyalties, no factions courting him, and nothing hidden.

SESSION 17 **−7.0 → −7.5 (−0.5, exposure up)** **The module was the first thing on the team to react to the abduction.** At the staging point after the warehouse it "*makes him feel weird,*" and he fell unconscious before anyone else; in the pocket dimension he said "*my power is broken.*" That is the third time something outside him has acted through the module — a write in Session 12, temporal transport in Session 15, a dimensional transfer now — and nobody has explained any of them.

4 Edge −6.0

ALL-TIME Three routes in Session 16, none yet used. **Psychic:** middling mental defences. **Biographical:** the widest — a legend that he is an ancient monster reborn whose true name is lost, powers that arrived with headaches and glowing eyes, and a question about what he is that whoever claims to know the answer could exploit. **Social:** the newest member, with his strongest attachments outside the team.

SESSION 17 **−5.5 → −6.0 (−0.5, exposure up)** RE-SPEC The psychic route widened, and the biographical one acquired a mechanism.

- **Psychic.** His Vigilance defence is now 13, the lowest on the team (Ego and Logic rose to 18), F-DR fell to 1, and the first mental-track hit of his file came through Vigilance: Facade's Suppressive Fire, 34 Focus and a stun.
- **Biographical.** He told the team his control is effortful: "*I practice my concentration a lot because if I don't, things could get bad.*" **Anything that breaks his concentration is now a known route to the part of him he is holding down.**
- **Social.** It narrowed slightly: the mentor tag is two named people, not a confusion.

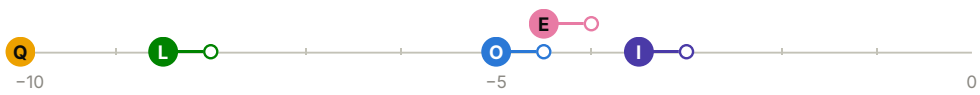

5 Intrepid −3.0

ALL-TIME Least vulnerable, and it is a genuine virtue rather than an absence: a mutant origin, no technology, no artifacts, no patrons, no factions, no secrets from the team, Iron Will, and the only Secret Identity on the active roster. **Mental defence is the way in**, and it has been used twice: the progenitor's 14-Marvel in Session 15, and in Session 16 the first power ever stolen from a Titan, his Sturdy 3.

SESSION 17 **holds at −3.0** A telepath got in again — Four-Fold opened a link in the middle of the bout — to ask whether he was all right. A Telepathic Link can be refused by anyone who does not want it, so this one he let in. Nobody is working on him. Holds.

2.2 Target Priority for Hostile Organizations

(Lex-Corp, the Destined, the Marrow Syndicate, STAR Labs' leadership, the Breeder and its brood, Apokolips-adjacent interests — and, from Session 17, the arena's producers. Position 1 = highest priority target.)

1 Quasar-Force −10.0

ALL-TIME At once the **evidence engine**, the **object of study** and **the quarry.**

- **The evidence engine.** The Lex-Corp case, three archives, the drone fleet, the tower shield, and the only evidentiary account against the organisation that holds the Breeder.
- **The object of study.** New Genesis technology with a public face, a known father at STAR Labs, 60 Health and the build of an eleven-year-old. Doctor Varga wants him in a laboratory; the Prodigy breeder called this team *excellent progeny.*
- **The quarry.** A New God who defected to Apokolips is searching for the object fused to his nervous system.

In Session 16 a hostile team arrived with a doctrine for him and said so — his fame, his known fragility, his grappling — and put him at −30 before its orders changed to collecting the team.

SESSION 17 **holds at −10.0 (the floor)** Taken with everyone else. The one hostile act aimed at him specifically came from an opponent, not an organisation: Briar Patch's grab. At the floor already.

2 Lock-Step −8.5

ALL-TIME Someone spent a purpose-built temporal artifact on him, which is a demonstrated willingness to invest; add the magical factions and the Marrow Syndicate's willingness to talk to him specifically. Session 15 supplied the reason — his powers are time-altering and lantern-derived. In Session 16 the same mob warehouse held a second device keyed to his time manipulation, the brood came for it, and Edge destroyed it.

SESSION 17 **−8.0 → −8.5 (−0.5, exposure up)** The arena. He spent the rest period predicting which of his own enemies would be in it — the Destined, "*and the others that we just failed capturing*" — and was wrong on both. That says more about how many organisations he expects to be after him than about who is.

3 Oracle −5.0

ALL-TIME STAR Labs cybernetics are worth reverse-engineering, and the predictive module is a standing tactical nuisance to anyone fighting the Titans. Session 14 showed the counter, and in Session 16 the brood planned around him: 72 physical damage, and a reaction that turned his Return Fire onto a teammate.

SESSION 17 **−4.5 → −5.0 (−0.5, exposure up)** The arena, and a pairing that looks chosen. The opposing team's power copier "*has copied his already*" before the bout began, and Facade picked him: "*that leaves you and me... I've got a good feeling about this.*" Whether the producers arranged it is unknown; Quasar-Force's view was that "*if they had the ability to set up such a fight, they absolutely would.*"

4 Edge −4.5

ALL-TIME On nobody's list when Session 16 began, and by its end the member who cost the brood its objective. Behind that, a Monster origin any organisation that studies metahumans would want a sample of. His identity is public but "*not very well known*," which is what keeps him below Oracle.

SESSION 17 **−4.0 → −4.5 (−0.5, exposure up)** The arena. Nothing aimed at him specifically.

5 Intrepid −3.5

ALL-TIME A problem to be solved on the battlefield, not a target to be acquired, until Session 15 put "*maybe the next Superman*" on a viral stream. In Session 16 he was the Titan the brood came closest to taking — unconscious at −49 — and his weight was one of the two reasons Blitzkrieg left without him.

SESSION 17 **−3.0 → −3.5 (−0.5, exposure up)** The arena. The weight that kept the brood from carrying him off kept nobody from taking him this time.

NOTE *Lobo is still deliberately excluded.* He is hunting Shein Qua, not a Titan, and Wonder Woman took the engagement personally. In Session 17 he came up once, as Quasar-Force's measure of the stakes back home: "*That'll depend on Wonder Woman versus Lobo and the Destined versus the other progenitor.*" RETCON The last edition's note that the team briefed Wonder Woman after the warehouse is withdrawn.

2.3 Target Priority for Amanda Waller — Squad Value

Position 1 = highest priority as a Squad conscript.

(Waller has already appeared in-fiction — Session 6, Argus Station: she moved Shadow-Boxer to Belle Reve and pointed Quasar-Force at Project Catalyst.)

This axis asks one narrow question: who does she put in a harness? A deniable field slot on Task Force X, with a bomb in the neck, sent somewhere she cannot be seen to have sent anyone. The criteria are fit, not value — coercible, expendable, quiet enough that nobody makes noise if they don't come back, and morally flexible enough to do what's asked. **Everything else she might want from these five is scored separately in 2.4.**

1 Lock-Step −9.0

ALL-TIME The textbook profile. He is powerful, chaotic, morally flexible enough to sedate a teammate and humiliate a restrained prisoner, and **he has no parents, so nobody files the missing-persons report.** His near-immunity to mental coercion is a *specification*: she reaches for a bomb rather than a leash, which she prefers anyway. Session 15 produced the most Squad-relevant item any Titan has: a killing commissioned by proxy, through a villain team, "*so we could technically keep our hands clean.*" **The one thing keeping him off the floor is that he is no longer quiet.**

SESSION 17 **holds at −9.0** The Task Force X sentence got a paragraph. "*We can either save and protect our righteousness or actually save people's lives*" is a recruitment pitch Waller would not need to write. The noise still keeps him off the floor.

2 Edge −6.0

ALL-TIME In Session 16, **the closest skill fit on the roster**: a dedicated marksman, the Squad's oldest archetype, with a Monster origin, a legend about a creature that "*cut down armies*," and an identity that is public but "*not very well known.*" OOC In at least one recent continuity Waller runs a squad made entirely of monsters. What kept him behind Lock-Step was the handle and the noise: no record, no debts, and a mentor one phone call from the harness. **He fit the slot; he did not fit the leash.**

SESSION 17 **holds at −6.0** RE-SPEC The fit and the leash moved in opposite directions. **The fit improved:** the marksman became area artillery, and an "*army-slaying cataclysm*" with a storm of blades is a Squad asset by description. **The leash got harder:** he is now on record as the member who will not accept a killing for convenience, and Waller would find that out in the first conversation. Holds.

3 Quasar-Force −5.0

ALL-TIME **A Squad slot is the worst possible use of him.** The homicide on file is real leverage and his power is obvious. Against it, he is the most photographed hero in Blüdhaven, publicly identified, reads as eleven, and has parents who would go to every camera in the state. Since Session 15 a Waller file would quote "*full lethal fury*" in full.

SESSION 17 **holds at −5.0** A Waller file would put "*the destined will kill every man and woman in that lab*" beside "*full lethal fury.*" A Squad slot is still the worst use of him.

4 Intrepid −3.0

ALL-TIME A Secret Identity is genuine deniability, and he is by a wide margin the most physically survivable person on the team. He takes orders without argument. What keeps him low is that Waller can buy muscle anywhere, and he offers her no handle; two different powers have now got into him through his mental side, so she could use a leash rather than a bomb.

SESSION 17 **holds at −3.0** Nothing new.

5 Oracle −2.0

ALL-TIME **The worst Squad fit on the roster.** A spotless record, no leverage of any kind, an Extreme Appearance that makes him unmistakable on any operation, a STAR Labs provenance that guarantees institutional questions, and an instinct to report irregularities to his mentor at once — demonstrated in Session 14, when his first action after a total failure was to ring the sponsoring authority.

SESSION 17 **holds at −2.0** RETCON The last edition's "*The team briefed Wonder Woman the same afternoon*" is withdrawn. Nothing else changed: he would still ring somebody the evening she spoke to him.

2.4 Target Priority for Amanda Waller — Strategic Interest

(Everything that is not a field slot: asset cultivation, informant recruitment, containment files, laboratory interest, and leverage held in reserve. Position 1 = highest priority.)

1 Quasar-Force −9.5

ALL-TIME She has already tasked him once: the Project Catalyst nudge used a fourteen-year-old as an unpaid intelligence asset. He is New Genesis technology bonded to a compliant minor and the best technical mind in Blüdhaven; Session 14 added a New God hunting him, and Session 15 three builds ARGUS would want the specifications for before it wanted the builder. Too visible to strap a bomb to; perfect to *cultivate*. **It is the most valuable file in this document.**

SESSION 17 **holds at −9.5** The file gained one page ARGUS would pay for — a mother box cannot reach the Source from an isolated dimension, and says so — and nobody from ARGUS saw it.

2 Oracle −7.5

ALL-TIME **Second because of Precognition.** A sixteen-year-old who sees twenty-four hours ahead is worth more to a planning cell than any brawler she could conscript, and the module has shown it can *receive* as well as forecast. The STAR Labs cybernetics are a second interest; since Session 15 they resonate with time-wave phenomena. He is compliant with legitimate authority, so she can approach him through channels.

SESSION 17 **holds at −7.5** The module reacted to a dimensional transfer before its host did. A planning cell would want that dissected too; it is the same file.

3 Lock-Step −7.0

ALL-TIME Until Session 15, a poor investment for anything but a harness. **Session 15 made him three things she collects:** a cosmic-order asset (a Grey Lantern successor wearing the ring, in a campaign where time powers are banned), an informant (the Destined owe him and he owes them), and a public voice. Session 16 added third-party confirmation: a crime syndicate trafficking a device keyed to his time manipulation.

SESSION 17 **holds at −7.0** Nothing new reached her.

4 Edge −6.5

ALL-TIME **A containment file before he is anything else.** A Monster-origin fifteen-year-old whose legend says he is an ancient creature reborn, who can slice through objects by concentrating, and whose powers arrived with chronic headaches and glowing eyes is exactly the profile ARGUS opens a laboratory file on. He also brings a route through Black Canary to the Birds of Prey, a network she would rather watch than fight.

SESSION 17 **−6.0 → −6.5 (−0.5, exposure up)** RE-SPEC The containment file thickened. The power that sliced an attacker's weapon now has an area form — Supernova, every enemy within ten spaces — and the roster's profile no longer hedges the legend: "*An ancient army-slaying cataclysm reborn into a soft-spoken teenager.*" Still below Lock-Step, because nobody has confirmed what the legend is.

5 Intrepid −2.5

ALL-TIME A mutant physiology file and nothing more, held above zero only because ARGUS keeps files on metas as a matter of routine — and a viral stream calling a sixteen-year-old "*the next Superman*" is the sort of claim ARGUS opens a file on.

SESSION 17 **holds at −2.5** Nothing new.

2.5 Susceptibility to Enemy Legal & Bureaucratic Action

(Position 1 = most exposed. Lex-Corp's counsel is already engaged: a cease-and-desist is on record, a wrongful-death threat is circulating via the deceased's uncle, and Nightwing operates under the Batman mantle with correspondingly higher scrutiny.)

1 Quasar-Force −10.0

ALL-TIME Not close. **He caused a death**, gave a statement to police, is publicly identified, is the named custodian of contested evidence, and argued statutory law with a Lex-Corp attorney while unqualified to do so. He is a minor, which makes his parents the real defendants and his statements easy to characterise as unreliable, and a "science advocate" is seeding a diminished-control narrative. In Session 15 he endorsed sending a villain team to break into a research facility. He is not *a* legal exposure for this team; he is *the* case.

SESSION 17 **−9.5 → −10.0 (−0.5, exposure up; the floor)** **Foreknowledge completes the case.** He endorsed sending the Destined in Session 15. In Session 17 he said, in front of four witnesses and an unknown number of cameras, that he is "*very confident*" they "*will kill every man and woman in that lab, whether the progenitor is there or not*," and defended the decision. If the Destined act, an accessory theory no longer needs to prove that he foresaw it. He also told another universe that his father works at STAR Labs.

2 Lock-Step −9.0

ALL-TIME A defence attorney's gift: a fourteen-year-old teammate sedated twice with a witness who refused to take part, a restrained captive humiliated over an objection, habitual breaking and entering, evidence concealed from his own mentor, and a stipend that makes him a payee. Session 15 added the solicitation, the five teenagers' faces broadcast with *#SomeKidsJustNeedAWhooping*, a STAR Labs employee broadcast, and a livestreamed League facility. In Session 16 he met one of those teenagers, offered her the cuffs, knocked her out and left her cuffed in a crime syndicate's warehouse. **He was the member who once said out loud that this team needs lawyers. He is now the member who most needs one.**

SESSION 17 **−8.5 → −9.0 (−0.5, exposure up)** The solicitation acquired a stated motive and a statement of indifference to its side effects: "*deaths we're not worried about right now*." That is the sentence a prosecutor reads to a jury.

3 Intrepid −2.5

ALL-TIME Ground-Shaking Stomp discharged into rooms containing ordinary humans is a mass tort waiting for one bad roll, and he has come within a hair of it three times. No casualty, no public identity and no assets, so his exposure is entirely prospective.

SESSION 17 **holds at −2.5** No stomp, and a reminder to his teammates that area attacks hit everyone in them. Holds.

4 Edge −2.0

ALL-TIME Little on file: fifteen, a public identity that is "*not very well known*," and no record. The one incident in his backstory ended with an attacker's weapon sliced to pieces. **What would make him a case is the lethal ceiling of his power**, and nothing has come near it.

SESSION 17 **holds at −2.0** RE-SPEC The prospective exposure changed shape: the ceiling that would make him a case is now an area power. On the record he is the one member who objected to the errand, which is exculpatory for him and for nobody else. Holds.

5 Oracle −0.5

ALL-TIME The cleanest record on the team, and actively exculpatory for everyone else: he demands surrender, heals opponents, revived a man Intrepid nearly killed and attempted to revive the man Quasar-Force killed, and in Session 14 made a contemporaneous report of a loss, voluntarily, on the night. **If this team is ever deposed, Oracle is the defence's best witness.** NOTE He was present for the Day 56 planning, and has sat through references to it since.

SESSION 17 **holds at −0.5** The deposition question now has an answer, and it does not help his side. Asked by a teammate whether the killing was their problem, he vouched for the teammate who arranged it. That moves 1.10 and 1.12. His own exposure is still the smallest on the team. Holds.

2.6 Personal Leverage / Exploitability

What an adversary can hold over this person specifically. Position 1 = most exploitable.

1 Quasar-Force −9.5

ALL-TIME Every category at once: parents at a known address, a public identity, an accidental death on record, an artifact fused to his nervous system that cannot be removed without killing him, and a habit of answering honestly whoever asks politely. **He is fourteen, so leverage on him is leverage on his family and the reverse.** Session 14 found the most precise lever — a pencil sketch of Azimuth — and Session 15 a lever of a different kind: the entity inside him has a name, and he loves her ("*second mother*," "*Stella*," "*It's two people's home*"). **Leverage on one of them is visibly leverage on both.**

SESSION 17 **holds at −9.5** **The lever acquired a voice.** "*I am still with you. Don't be afraid... I will find a way. Source—no! No! No—... Help.*" He could not comfort her, and she withdrew. An adversary who can offer the box a way back to the Source, or threaten to keep her from it, now holds something a fourteen-year-old would trade a great deal for. Nobody is holding it yet; holds short of the floor.

2 Lock-Step −8.5

ALL-TIME A misconduct file that would end him with every authority figure in his life, and magical entanglements pulling three ways. Session 15 removed the insulation of having nothing to seize: **a villain holds his private request to have someone killed, in his own words, and he knows it.** Around it: a favour owed to the Destined, an audience and a reputation, a named best friend, a civilian name in an outside party's hands, and a ring he cannot charge.

SESSION 17 **holds at −8.5** He handed a new party his first name and gave the team a new lever on himself ("*my mentor technically now*"). Both are already priced. Holds.

3 Edge −4.5

ALL-TIME Three levers on the sheet and in the backstory. **The identity question:** anyone who claims to know what the monster is, or how to stop the headaches, is offering something he has wanted since the powers arrived. **The people:** Black Canary and the Birds behind her. **The obligations:** school, with grades that were "*already bad*," and a public identity.

SESSION 17 **−4.0 → −4.5 (−0.5, exposure up)** A fourth lever, in his own words: "*I practice my concentration a lot because if I don't, things could get bad.*" Whoever can make him lose it, or credibly threaten to, holds something. The people lever got a second name, Barbara Gordon.

4 Oracle −3.0

ALL-TIME A clean record, no divided loyalties and nothing concealed. The one lever that seemed to fit him — a voice in his own head presenting as a frightened sixteen-year-old asking to be saved — was tested under the worst available conditions and did not move him. What remains is structural: cybernetics he cannot audit, the weakest mental defence on the team, and a proven route into his cognition.

SESSION 17 **holds at −3.0** FLAG CLOSED Edge's mentor tag is Barbara Gordon; the newcomer is not someone Oracle is responsible for. The one new thing an adversary might use is disillusion — "*most of the people telling us what to do don't know what they're doing*" — which is a recruiter's opening rather than something to hold over him. Holds.

5 Intrepid −2.0

ALL-TIME A Secret Identity, no assets, no factions and no secrets from his own side. His levers are personal and he supplied them himself: the fear of hurting people, the fear of being replaced, and an ambition ("*Not yet anyway*") that is an offer waiting for somebody to make it.

SESSION 17 **holds at −2.0** Nothing new.

2.7 Value to Enemy as Hostage / Leverage

How much would be surrendered to get this person back. Position 1 = most valuable to hold.

NOTE *Session 17 is the first session in which the whole team was held — and no ransom was asked. "Substitution may not be allowed until the episode is over": the hosts wanted a show, not a price. This axis prices what parties would give to get each Titan back, and that did not change.*

1 Quasar-Force −9.5

ALL-TIME The team would give up almost anything, and so would several institutions. He is fourteen, presents as eleven, is universally liked, and carries New Genesis technology that Batman, STAR Labs and ARGUS each have separate interests in. Holding him means negotiating with six parties: the team, his parents, the Justice League, Guy Gardner, Doctor Taleria, and Azimuth. **Nobody on this roster is worth more alive.**

SESSION 17 **holds at −9.5** None of the six could be reached, including the one who picks up mid-fight.

2 Oracle −7.0

ALL-TIME Taking Oracle removes the team's entire recovery capability as well as a person, and he is the most trusted member, so any ransom put to this team would be paid. Session 14 ran the scale model without anyone having to take him, and Session 16 ran it at full size: while he was down at −2, nobody healed anybody, and every recovery the team made went through him.

SESSION 17 **holds at −7.0** The scale model on a smaller scale: the two members without healing factors stayed down until he woke.

3 Lock-Step −6.0

ALL-TIME No family to ransom and a damaged relationship with his own side. What raised him was external: Doctor Fate, Zatanna and Constantine all hold positions on him, and Session 15 added a time-travelling order that designated him a successor and a people who owe their existence to him. In Session 16 he was the team's way out.

SESSION 17 **holds at −6.0** The way out failed — "*out of range*" — for the first time, and the price his outside parties would pay is unchanged.

4 Edge −5.0

ALL-TIME The team had known him for an afternoon, so **the value comes from outside**: Black Canary and the Birds, and Nightwing, who recruited him personally.

SESSION 17 **holds at −5.0** The outside got a second name, Barbara Gordon, and it was already priced.

5 Intrepid −4.0

ALL-TIME Universally liked and institutionally invisible. The team would come for him; nobody else would. In Session 16 the team did, on the last of Lock-Step's Focus.

SESSION 17 **holds at −4.0** Nothing new.

2.8 Consequence Severity in the Event of Compromise

Conditional severity, not likelihood — how bad is it if this person defects, is mind-controlled, or is turned by leverage. Position 1 = worst outcome.

1 Quasar-Force −10.0

ALL-TIME **The worst single scenario in the campaign.** Psyche ran the scale model across Sessions 12 and 13, bringing down the main containment field on the Celestial Core with his telekinesis. A compromised Quasar-Force delivers the complete Lex-Corp evidence chain, three archives, the drone fleet and its codes, three laboratories, the tower's teleport shield and the team's operational picture. It also delivers a body that lifts cruise-ship tonnage without a check, wrapped around an Apokoliptian-modified intelligence with its own agenda. And he could simply take off the device that hides him from Azimuth.

SESSION 17 **holds at −10.0 (the floor)** Nothing changed the payload. The box in distress is a matter of likelihood (2.1, 2.6).

2 Lock-Step −9.0

ALL-TIME Teleport Together means a compromised Lock-Step can put anything anywhere, including inside the tower. Berserk has shown what he does without restraint, and Doctor Fate's objection is that his chaotic nature is a danger on a scale larger than Blüdhaven. Session 15 added a ring of unknown capability, a time-coded power source and the team's entire public voice; Session 16 demonstrated the first sentence, moving the team out of a hostile building one teleport at a time.

SESSION 17 **holds at −9.0** The teleport that could not get the team home still moved it through a maze in three jumps. Holds.

3 Edge −8.0

ALL-TIME Third on arrival in Session 16, and the reason was the legend. A turned Edge was the team's best rifle, with a healing factor, a dodge and the only Heightened Senses on the roster, living in the tower. Behind the kit: a power that slices through objects by concentration, the title *The Reborn Calamity*, and a monster that "*cut down armies.*" **If the legend is literal, the severity is not the kit but what the kit is attached to.**

SESSION 17 **−7.5 → −8.0 (−0.5, exposure up)** RE-SPEC The payload grew. A turned Edge is now area artillery: every enemy within ten spaces at ×7+7 and up, and two Force blasts a round through Lightning Actions, from someone who sleeps in the tower. His own account of the failure condition — concentration lost, "*things could get bad*" — is the scenario this axis prices.

4 Oracle −7.0

ALL-TIME Underrated and severe. A turned Oracle hands the enemy **twenty-four hours of precognitive lookahead and a perfect eidetic record of everything this team has ever done or discussed**, then heals the people fighting it. The channel into his module is proven and unrepaired. What kept him below the members above was auditability, and a payload measured in information and recovery.

SESSION 17 **−6.5 → −7.0 (−0.5, exposure up)** **Session 17 ran the scale model with a copy.** Facade, wearing Oracle's powers, stunned Edge with a reaction Suppressive Fire for 34 Focus and parried Oracle into 34 damage and a stun. Two Titans were neutralised in two actions by somebody using nothing but his kit. His payload is not only information and recovery; turned, it is a combat kit that finds the team's softest defences.

5 Intrepid −6.0

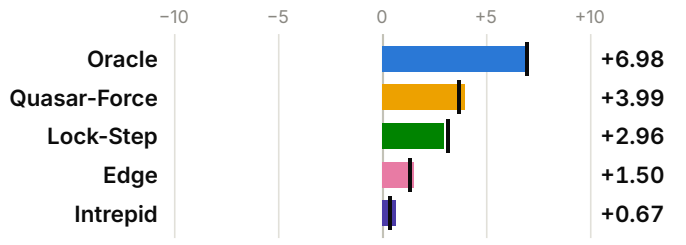

ALL-TIME A hostile Intrepid is a containment problem this team cannot solve with the tools it fields: 210 Health, H-DR 3, Healing Factor 7, Immovable and an indiscriminate area attack. Session 16 ran a partial version: the team spent an afternoon unable to put down the one enemy built like him.

SESSION 17 **holds at −6.0** Capricorn, a brick of his own class, put him prone with a 72-point Marvel ram. The containment problem is the one Session 16 described.

Read this axis against 2.1. Lock-Step and Quasar-Force are first and second on likelihood and second and first on severity, so the two most dangerous people to lose are still the two most likely to be taken. **Session 17 moved Edge and Oracle half a point on both axes, and the orderings held.** Edge's rebuild lowered his Vigilance door and put an area weapon behind the question his file has carried since he arrived. Oracle's module reacted first to the abduction, and his copy showed what his own kit does when somebody else is wearing it.

SECTION 3 · 9 AXES · VALENCE −10.0 TO +10.0 (3.1–3.5) · MAGNITUDE 0.0 TO 10.0 (3.6–3.9)

§3 Team Internals

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

Session 17 is the first session in which the newcomer disagreed with the room. He did it twice, on the two most serious questions the team had — the Destined errand and whether to rehearse a formation — and a third disagreement, at the door, split the team in two. Section 3 moved on 21 placements.

3.1 Internal Reputation with Teammates

VALENCE −10.0 TO +10.0

1 Oracle +9.0

ALL-TIME Universally trusted, and it is earned rather than granted. He feeds the team, heals it and keeps his word, and what actually generates respect is that he declines to do the wrong thing even when a teammate with more social pull asks him to; Lock-Step still comes to him for help *after* being refused. In Session 15 Lock-Step took him into first contact as "*my boy*" and joked on a stream that he is "*the guy that always tells us what we do wrong and tries to fix it.*" **That is the joke you make about the person whose judgement you depend on.** In Session 16 the joke became a title: "*Oracle is our plan guy.*"

SESSION 17 **holds at +9.0** The title is now a maneuver. Asked by the newcomer whether the team has formations, Lock-Step listed "*the not dying maneuver*" and "*the Ask Oracle*," and of the maze, "*That's an Oracle thing.*" Edge's verdict on his warehouse fight was "*It was amazing*," and Edge's first burger went to him. Already at the top of the band.

2 Quasar-Force +8.5

ALL-TIME Genuinely loved. Oracle calls him the only sane person in the group and cooks around his appetite, and the team carried him home unconscious in Session 14 and spent Focus it did not have to wake him. **The discount is structural:** the team talks to him as a pre-teen. Session 15 raised the intellectual respect ("*That's our smarts*") and opened a doubt ("*Are you human or are you mother box?*"); Session 16 spoke the discount aloud to the newcomer ("*that kid that looks like he is like 12*"), and he corrected it himself.

SESSION 17 **+8.0 → +8.5 (+0.5)** **The respect overtook the discount, from the person who applies it most.** "*All right, Quasar, you're the brains. That's why I've really, really stayed with you because you know, people are telling us where to go, but you actually know where we should go.*" The discount was in the same breath ("*our youngest*") and in another universe's mouth ("*you look like you're like 12*"), and the regard was the larger of the two.

3 Intrepid +6.5

ALL-TIME No enemies, no complaints, no friction. He plays video games with Lock-Step, takes hits for everyone and goes along with team decisions cheerfully, and nobody defers to him about anything. Session 14 was the first time a teammate went after him — the word *coward* — and Session 15 the public reversal ("*I will never doubt you again*"). In Session 16 the same teammate asked his permission before moving him.

SESSION 17 **holds at +6.5** "*Hey, actually, it looks good on Intrepid*," from the newcomer. From Lock-Step, an argument at the door that Intrepid settled by walking. Holds.

4 Edge +5.5

ALL-TIME Welcomed in Session 16 before he had done anything — "*Oh, thank god, finally, we get somebody competent*" — and then he earned it in order: the target call the team adopted, two decisive assists, the shot that destroyed the device, and a round alone against Blitzkrieg. His reply to Oracle's briefing, "*Ok, that told me nothing*," is the kind of line a room keeps.

SESSION 17 **holds at +5.5** Both accounts moved, in opposite directions.

- **Professional:** "*It was amazing*" was his verdict on Oracle's fight, and his own bout lasted one turn.
- **Character:** a full combat punch on a teammate, a day of pushing a formation on people who did not want one, and Lock-Step's "*I'm still unsure about you.*"

Intrepid sided with him at the door, and Quasar-Force backed his training plan ("*Better just some of us than none of us*"). Holds.

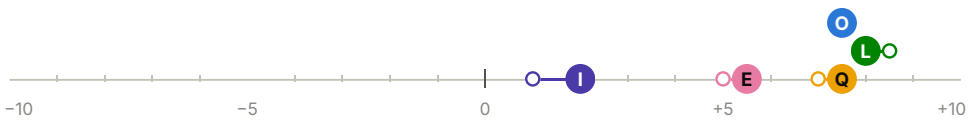

5 Lock-Step +4.5

ALL-TIME Two accounts that don't reconcile. **Professional regard is high**: four consecutive clean engagements by Session 14, the healing hex, Kwa, and in Session 16 the knockout on Argent and the whole extraction. **Character regard is damaged**: the sedations, the humiliated prisoner, the concealed artifact, the *coward* fight, the lasso, and in Session 15 every teammate used as stream content. In Session 16 he made two wrong claims to the newcomer, and both were corrected in front of him.

SESSION 17 **+5.0 → +4.5 (−0.5)** **Two teammates ran out of patience with him in the same five minutes.** Edge: "*Get your ass back here!*", "*I give up, I completely give up,*" and "*I can't believe that guy saved my life.*" Intrepid: "*You're gonna leave us to fend for ourselves last time.*" Against those, Oracle's "*There was a time I doubted Lockstep, and he's preaching the gospel*" — the warmest thing Oracle has said about him on record — and Quasar-Force's "*Come on, Lock-Step.*" The professional account gained nothing this session to set against the friction.

3.2 Internal Influence with Teammates

VALENCE −10.0 TO +10.0

1 Lock-Step +8.0

ALL-TIME Raw, demonstrated influence. He moved the team to a party none of them wanted to attend, decided the artifact would go in the vault, and made the surrender ritual de facto doctrine. Inside the Justice League's own station he assigned work and people. Session 15 was the most complete demonstration in the document — three teammates turned from *fight* to *talk first* on Kwa, and a Day 56 plan split across three parties — and Quasar-Force beat him in direct disagreement three times. In Session 16 he set the chair down himself ("*Oracle is our plan guy*") and kept the crisis.

SESSION 17 **+8.5 → +8.0 (−0.5)** He won the argument that mattered to him and lost the one that mattered to the team.

- **Won:** no formation was trained, and the newcomer's three hours of practice became a request to "*enlighten the group on everything that you do.*" Quasar-Force put the nullifier back because he said so, and the arena bout was played as a show because he framed it as one.
- **Lost:** when the door opened he stayed, and Intrepid and Edge walked on without him.

Edge called him "*Captain*," and then Edge gave up on him. Still first.

2 Quasar-Force +7.5

ALL-TIME Substantial and self-limited. His analysis sets the targets and his intelligence sets the plans; Session 13 produced the first two orders he gave inside a fight, both obeyed. He rarely spends influence against a teammate, and when he does it works: in Session 15 he beat the de facto leader three times without raising his voice. In Session 16 he shaped the plan without authoring it.

SESSION 17 **+7.0 → +7.5 (+0.5)** **The maze ran on his word.** Lock-Step asked him, "*where should we go, Quasar?*", and his answer set the team's division of labour: "*That's me, and Oracle. And you teleport, Oracle predicts, and I figure.*" When the team split on a direction in the water room, "*Quasar-Force pushes for south because of the forming partial consensus*," and the team went south. He also tipped the formation argument: "*Better just some of us than none of us.*"

3 Oracle +7.5

ALL-TIME His moral and logistical influence became directive influence several sessions ago. He calls Lock-Step in when he needs him, shuts down loose talk in front of enemies, called Nightwing knowing how Lock-Step would react, and in Session 14 said the team should rest and it rested. Session 15 was the only time he handed direction to someone else ("*I'll follow your lead*"). In Session 16 the room turned to him for the plan and he supplied one.

SESSION 17 **holds at +7.5** The team followed him to the door — "*Oracle moves towards the door, the rest of the team follows*" — and nowhere else. His best idea of the session, not fighting at all, drew no answer from anyone, and his one intervention in the errand argument went to Lock-Step's side. Holds, and third on the tie.

4 Edge +5.5

ALL-TIME **Influence within minutes of arriving.** In Session 16 he named the first target and the reason, and the plan was built around it; he also made the team answer the two questions it had skipped, a plan and a situation report. One adopted call, ratified by Oracle's module rather than won in argument.

SESSION 17 **+5.0 → +5.5 (+0.5)** He moved two things. The arena rule, "*We follow the rule when it's easy and when it's hard*," was accepted by Lock-Step. "*For now, I think we should do what it says*" became the team's position with Intrepid's "*I agree too.*" The formation he wanted was not trained, and at the door he gave up arguing.

5 Intrepid +2.0

ALL-TIME "*Will go with any team decision.*" He once offered to squeeze objects until they break as his contribution to a security discussion. In Session 14 he reversed his stated position four times under one teammate's single word; in Session 15, asked for an idea, "*I got nothing.*" In Session 16 his answer to Lock-Step stood for the first time — about himself.

SESSION 17 **+1.0 → +2.0 (+1.0)** **The most influential session of his file, by a distance.** Two of his calls became the team's: "*We're gonna have to follow along with this arena thing*," and "*Well, let's rest up. We're gonna have to fight in arena.*" At the door, when the team stalled, he walked, and the newcomer walked with him. He also put "*Let's go AOEs*" into the pre-bout conversation, and Lock-Step built a plan on it.

Closest call: Quasar-Force over Oracle on a tie at **+7.5**, broken on Session 17 evidence: his calls were adopted, and Oracle's were not.

3.3 Internal Trust / Reliance

VALENCE −10.0 TO +10.0

Not affection — who the team actually depends on.

1 Oracle +9.0

ALL-TIME Everyone relies on him for something they cannot do without: healing, food, honest reporting, and the medic station holding. He is the only member whose absence would change every other member's day. Session 14 showed what his absence looks like without his being absent. In Session 16 the reliance ran the whole fight: Let's Go kept Quasar-Force on the board and then held up an unconscious Lock-Step long enough for him to teleport everyone out.

SESSION 17 **holds at +9.0** The two members who could not get up on their own got up on his Focus — 60 each, leaving him 5 of 180. RETCON These are the heals the last edition placed at the end of Session 16; they happened here, in a different room, on different patients. Already at the top of the band.

2 Quasar-Force +8.0

ALL-TIME The team routes intelligence, analysis, tactical calls and evidence custody through him without discussion, and in Session 14 spent Focus it did not have to wake him, because it needed him working. **You do not spend your last resource waking somebody you can do without.** In Session 16 the drones were the team's eyes before the door opened.

SESSION 17 **holds at +8.0** The maze relied on him — the keypad, in seconds, on a 26 — and so did the bunk room, for the cameras and the nullifiers. The drones did not answer, and he spent a minute frozen at the door. Holds.

3 Intrepid +6.5

ALL-TIME Relied upon absolutely for exactly one thing: nobody worries about whether Intrepid will be where the damage is. When his tools failed in Session 14, nobody blamed him, which is itself the reliance. In Session 16 he was where the damage was, and refused to be moved out of it.

SESSION 17 **holds at +6.5** He walked the stepping puzzle while the orbs fired at him, and went through the colosseum door first. Holds.

4 Lock-Step +5.5

ALL-TIME Professionally indispensable and personally unreliable, and the team behaves accordingly: they hand him negotiations and then discuss him behind his back. **Oracle went around him to Nightwing once and would do it again.** The professional half improved sharply from Session 13, and in Session 16 the team relied on him for the way out, and he delivered all of it.

SESSION 17 **holds at +5.5** The professional half delivered again: two teleports moved the team through two rooms of the maze, and his Protection Hex finished the stepping puzzle. The way out failed for the first time — "*out of range*" — and the personal half held the team at the door. Holds.

5 Edge +5.0

ALL-TIME The team had known him for minutes in Session 16, and by the end it was relying on him for the exit: he held off Blitzkrieg alone so the extraction could happen, assisted two of Intrepid's attacks, and destroyed the brood's objective. The trust was earned in one fight and untested by anything else.

SESSION 17 **holds at +5.0** He was tested by something else, as the last edition asked: a disagreement and a quiet day. The result is mixed. The team ate his food and let him take his opponent; it did not train his formation, and Lock-Step told him "*I'm still unsure about you.*" Holds.

3.4 Team Cohesion Contribution

VALENCE −10.0 TO +10.0

1 Oracle +9.0

ALL-TIME He is the reason this is a household rather than a group of people in a building. Breakfast is timed around who wakes when, and the medic station is also the place people end up talking. In Session 14 he was the one who said Wonder Woman's apology counted. To a newcomer who had just been told the adults were trash, his first words in Session 16 were "*Don't worry, the bar is low, it's alright.*"

SESSION 17 **holds at +9.0** He healed the room, slept, and stayed behind at the door so that the youngest would not come through it alone. Holds.

2 Quasar-Force +7.5

ALL-TIME Universally liked; he thanks people constantly and defuses rather than escalates. **He is the person nobody on this team wants to be in conflict with.** In Session 15 he disagreed with the most socially dominant person on the team three times without a moment of friction. In Session 16 he drew out the most honest thing Lock-Step has ever said about himself, and answered it with a yacht party.

SESSION 17 **holds at +7.5** "*Better just some of us than none of us*," "*Come on, Lock-Step*," and a friendship offered across the arena floor ("*Well, we can be friends!*"). He took no side in the door argument; he was frozen in it. Holds.

3 Edge +5.0

ALL-TIME A good first afternoon in Session 16. He met a complaint about adults with tact, asked for a plan without making anyone look bad for lacking one, and backed two of a teammate's attacks. No friction, and nothing yet that bound the group.

SESSION 17 **+4.5 → +5.0 (+0.5)** **The first person other than Oracle to feed the team.** The log: "*Edge sees that everybody is pretty down, so he tries to chill everyone by preparing and bringing food to people especially Oracle.*" Then the explicit cohesion proposal — "*I need to form part of that and I want to see how do I need to move so we work together*" — and "*keep our code together.*" Against it, the friction he generated getting there: the punch, "*You're not really giving up before you try. That's your problem*," "*Get your ass back here!*" and "*I give up.*" **Net, something that binds.**

4 Intrepid +4.5

ALL-TIME No friction with anyone. He plays video games with Lock-Step, takes the hits and never sulks about a decision going the other way. The only friction on his file came in Session 14 and was defensive. His cohesion is passive and reliable.

SESSION 17 **+5.0 → +4.5 (−0.5)** The second friction on his file, and the first he started: "*You're gonna leave us to fend for ourselves last time*," at the door, and then he walked on. He was right about the clock, and the team split.

5 Lock-Step +3.0

ALL-TIME **The team's largest source of both morale and conflict.** He brings the popcorn, the licorice, the parties and the video games, and he got everybody paid; he also called a teammate a coward in front of a Justice Leaguer, used every teammate as stream content, and brought the Destined into the tower with a debt attached. **The morale he generates is real and has always come with a bill.** Session 16 balanced: a warm welcome to the newcomer, delivered as a lecture about adults.

SESSION 17 **+3.5 → +3.0 (−0.5)** The morale side was there in the arena, where he charmed both teams. The conflict side ran the door: he refused to go until the rules were stated, argued the penalty clock away, and the team split. He also turned down the newcomer's one cohesion proposal ("*We don't really practice it just kind of you know just*"). Staying with Quasar-Force is the best thing on this page of his file, and it is also why the others went on without him.

3.5 Low Operational Support Burden

VALENCE −10.0 TO +10.0

What the team spends to keep this person in the field: gear, medical draw, money, transport, cover maintenance, and consequence cleanup. **Not** *how sustainably they occupy the role (1.3) and* **not** *how stable their private life is (1.7) — this is the squad's logistics bill. High = cheap to field, or a net contributor.*

1 Intrepid +6.5

ALL-TIME He costs almost nothing. He absorbs the worst punishment on the team and repairs it himself, with no technology, no artifacts, no patrons and no consumables, and his Secret Identity maintains itself. **He is the cheapest sustained combat capability this team fields.** In Session 16, for once, he cost an extraction.

SESSION 17 **holds at +6.5** His healing factor woke him. A 72-point ram in the arena has cost nobody anything yet. Holds.

2 Edge +4.5

ALL-TIME The second-cheapest member on arrival in Session 16. He healed himself up from exactly 0, used no technology, and his constructible weapon meant the team kept no armoury for him. His training was paid for by Black Canary. Against that: fifteen, a School obligation, housed by the team, and a legend nobody had priced.

SESSION 17 **+6.0 → +4.5 (−1.5)** RE-SPEC **He gave up the healing factor, and the medic paid for it within the hour.** He was one of the two Titans who did not wake on their own, and Oracle put 60 Focus into him. He no longer carries an iconic weapon, so there is nothing to maintain. He also paid some of the bill back in a currency nobody but Oracle spends: he fed everyone. Still second.

3 Oracle +3.5

ALL-TIME Low draw and real overhead. He is the medic, so he never consumes medical support, and he heals himself. Against that, he has **no mobility power at all**, his cybernetics are a STAR Labs maintenance dependency, and Extreme Appearance means errands that need an unremarkable face fall to someone else. **The bill for Oracle is rarely money and never medicine. It is time, and it arrives all at once.**

SESSION 17 **holds at +3.5** The time bill again: after emptying himself on two teammates he needed most of the rest period asleep. And the module put him down at the staging point before anyone else. Holds.

4 Lock-Step +1.0

ALL-TIME **Cheap to field and expensive to keep.** He supplies his own transport, summons his own weapon, and has no address to maintain. The bill arrives elsewhere: at 60 Health with H-DR 0 he is a heavy medical draw whenever anything lands, and his conduct generates cleanup the team pays for, now including a favour owed to the Destined.

SESSION 17 **holds at +1.0** He woke on his own healing factor, asked to be hit, and was: the 15 Edge put into him was a draw he requested. The Destined favour is still outstanding. Holds.

5 Quasar-Force −3.0

ALL-TIME The largest medical draw on the roster: 60 Health and no healing of his own. The −12 in Session 14 cost a surgical extraction, an overnight watch, most of Lock-Step's remaining Focus, a League medical robot, a sedative and twelve hours of mandated sleep. He needs a drone fleet, laboratory access at three sites, and imposed structure to keep him eating and sleeping. Session 15 ran the bill the other way with new hardware; Session 16 showed the hardware did not stop the draw.

SESSION 17 **−2.5 → −3.0 (−0.5)** He cost 60 of Oracle's Focus to wake. Then he cost a minute of the team's time at the door, for a penalty he drew by pulling a nullifier out of a wall. Lock-Step stayed with him, and the team argued about it until the clock ran out.

NOTE *The anchor is still only half-restored.* Exemplar II was the only net contributor this axis has had. Edge arrived second in Session 16 at +6.0, "*cheap, not free.*" **The rebuild made him cheap to equip and costly to keep upright**, and the medic now carries two members who cannot recover on their own. The burgers are the first thing on this axis that anyone but Oracle has paid back in kind.

3.6 Command Chair — External Appointment

MAGNITUDE 0.0 TO 10.0

(Who Nightwing, Batman, Iron-Side, or the League would install.)

1 Oracle 8.5

ALL-TIME The obvious appointment. He is sixteen, mature, medically indispensable and Nightwing's most reliable channel. He will report honestly against a teammate's wishes, complies with imposed structure, and carries **Precognition, precisely the power an appointing authority wants in a field-leader's chair.** When Nightwing needed a Titan in a room with a STAR Labs CFO, he arranged it for Oracle, and in Session 14, when the operation failed, Oracle was the one who rang the client.

SESSION 17 **holds at 8.5** No authority could appoint anyone into a pocket dimension. The appointee said, for the first time, that most of the people who would appoint him "*don't know what they're doing*," and that Nightwing's briefing of the newcomer showed "*the kind of stuff we got to put up with.*" An appointing authority would still choose him. It would now be choosing someone who has stopped assuming it is right. Holds.

2 Quasar-Force 3.5

ALL-TIME Strong indicators and hard blockers. He is the historical primary Nightwing correspondent, the evidence custodian, and the team's point of contact with the League; when Lock-Step asked who the smartest person in the Justice League was, Wonder Woman pointed at him. The blockers have nothing to do with competence: he is fourteen and presents as eleven, a fatality investigation is open, an Apokoliptian-modified intelligence is bonded to his brain, and since Session 15 he has been on record endorsing lethal force by proxy. **Being the person an institution protects is close to the opposite of being the person it puts in charge.**

SESSION 17 **holds at 3.5** "*The destined will kill every man and woman in that lab*" would stop an appointment on its own. It does not move a score the blockers already hold low.

3 Edge 2.0

ALL-TIME **The only member an outside authority chose for anything in Session 16** — Nightwing, as Batman, recruited and briefed him — but the appointment was to the team, not to its chair. Fifteen, an afternoon into the job, Logic −1, and a mentor whose opinion would carry weight with the League.

SESSION 17 **holds at 2.0** The appointment now has two named mentors behind it. Nothing moved.

4 Intrepid 1.5

ALL-TIME Brave and reliable, with no command indicators: Logic 0, no communications role, and no questions when Nightwing invited them.

SESSION 17 **holds at 1.5** Nothing moved.

5 Lock-Step 1.0

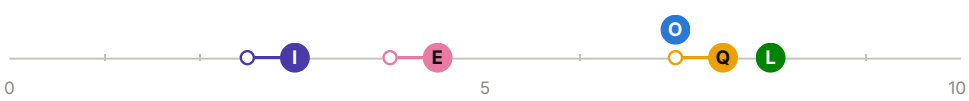

ALL-TIME He has told Iron-Side to her face that her school is fake, told the room Nightwing can't be trusted, tried to conceal a dangerous artifact from him, and sedated a minor teammate. In Session 15 an external order did appoint him — to the succession of a Grey Lantern — but none of the authorities this axis lists would. **The one institution that chose him is not one his mentors can see.**

SESSION 17 **holds at 1.0** He called the Grey Lantern "*my mentor technically now*," and asked the arena's announcer to stop talking. Nothing a League appointer would see.

3.7 Command Chair — Internal Emergence

MAGNITUDE 0.0 TO 10.0

(Who the team converges on without anyone appointing anybody. Iron-Side deliberately declines to appoint a leader or impose a chain of command, so this path is currently the live one.)

1 Lock-Step 8.0

ALL-TIME **Emergence follows initiative, and nobody else on this team reliably supplies it.** Even inside the Justice League's station he was the one assigning work. His authority decays with absence. In Session 15 the team converged on him from the first minute to the last, and under pressure he governed by decree ("*we don't have the time to be democratic*"). In Session 16 he handed the plan to Oracle in front of the newcomer and kept the crisis.

SESSION 17 **holds at 8.0** Called "*Captain*" by the newcomer, and the team's voice in every exchange with the hosts and with Earth X357. Then the team did not follow him through the door, and he ceded the maze outright: "*you're the brains... where should we go, Quasar?*" Still first; the convergence now has edges.

2 Quasar-Force 7.5

ALL-TIME In practice he sets objectives, deconflicts targets, manages the operational picture and holds the institutional memory of the conduct standard; the room follows his analysis without treating him as its leader. In Session 15 his view prevailed every time it collided with the leader's. In Session 16 he was the brood's first target and spent most of the fight down.

SESSION 17 **7.0 → 7.5 (+0.5)** **The team converged on him for the maze**, by name. His summary of the division of labour — "*you teleport, Oracle predicts, and I figure*" — is the clearest statement anyone has made of how this team actually runs. **He passes Oracle.**

3 Oracle 7.0

ALL-TIME The default in a crisis, by gravity: he says surrender first, holds the medic station and shuts down loose talk. Across two sessions without a leader in the room he simply *was* the lead. Session 15 was the first time he explicitly handed it to someone else; in Session 16 the room turned to him for the plan by name.

SESSION 17 **holds at 7.0** The room followed him to the door, and in the maze it followed someone else. His one strategic proposal — don't fight, "*bust out of here together*" — found no takers. Holds.

4 Edge 4.5

ALL-TIME On his first afternoon he asked the room for a plan, got "*No plan,*" and supplied the target, which became the plan within minutes. One call is not emergence, and he directed nobody in the fight.

SESSION 17 **4.0 → 4.5 (+0.5)** He asked the room for a plan again, and this time tried to build one: a formation, three hours of practice, a map of who does what. It did not happen. The team's one moment of convergence on his line was real — Intrepid at the door. "*Captain*" was his word for someone else, which is how a newcomer behaves while he learns the room.

5 Intrepid 3.0

ALL-TIME The roster notes that he tries to lead and is not always the right man for it. The attempts are visible and they don't land. In Session 15: "*I'm not really a thinker.*" In Session 16: "*Nothing, I guess.*"

SESSION 17 **2.5 → 3.0 (+0.5)** The rest period was his call. The walk through the door was his decision, and the newcomer followed it. **The first time this axis has had something to give him.**

3.8 Command Chair — Overall

MAGNITUDE 0.0 TO 10.0

(Weighted toward emergence, since no appointment currently exists.)

1 Oracle 8.2

ALL-TIME The only member with no hard blocker on either path: first on appointment, and first in practice in every session the incumbent missed. Session 15 took 0.2 off on emergence; Session 16 gave it back when the team's emergent leader pointed at him for the plan.

SESSION 17 **holds at 8.2** Appointment held, and emergence held.

2 Quasar-Force 5.3

ALL-TIME Top three on both paths and blocked on both, for reasons that have nothing to do with capability: his age and presentation, the open fatality investigation, and OOC the box a New God is hunting. **He is the most likely person to be *running* the team while someone else *leads* it**, and Session 15 was the literal case.

SESSION 17 **5.0 → 5.3 (+0.3)** Emergence rose on the maze. **He passes Lock-Step**, a call the last edition marked volatile at a tenth.

3 Lock-Step 5.1

ALL-TIME Dominant on emergence and disqualified on appointment. He holds the chair in all but name and is the least likely person on the roster to be handed it. Session 15 was the first session in which holding it produced a result nobody else could have produced, and a decision nobody else would have made.

SESSION 17 **holds at 5.1** Emergence held on a weaker day; appointment was already as low as it goes.

4 Edge 2.7

ALL-TIME Third on appointment, fourth on emergence, and an afternoon into the job at Session 16: the right question, the right target, and a recruiter who briefed him personally.

SESSION 17 **2.5 → 2.7 (+0.2)** Emergence up half a point.

5 Intrepid 2.2

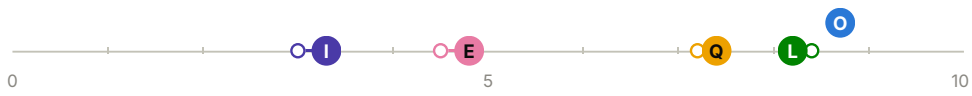

ALL-TIME Neither path was open to him, and he had not asked for either.

SESSION 17 **2.0 → 2.2 (+0.2)** Emergence up half a point, on the first decisions of his file that others followed.

Volatile: Quasar-Force over Lock-Step by 0.2. **This is the fourth consecutive session without Nightwing on screen.** RETCON The last edition's "*after the fight the team briefed Wonder Woman*" is withdrawn: the team was taken from the staging point and has reported to nobody. NOTE The user's reading that Wonder Woman is becoming the team's mentor is still not GM-confirmed. **Two external authorities have acted on this team without formalising a chain of command, and in Session 17 neither could reach it; a third party, the arena, set its rules and enforced them by freezing people.**

3.9 Overall Pecking Order

MAGNITUDE 0.0 TO 10.0

1 Oracle 8.7

ALL-TIME The highest reputation, moral authority and indispensable support, and a willingness to overrule that has stopped being occasional. Nightwing routes through him, and the room defers to him when it is not arguing. In Session 16 the jab became a job title — "*Oracle is our plan guy*" — and the gap to second widened to three tenths.

SESSION 17 **holds at 8.7** Unchanged on the facts. The gap to second widened again because second slipped.

2 Lock-Step 8.2

ALL-TIME The highest raw influence on the team. He sets group direction and treats others' consent as negotiable, and the ceiling has always been that the adults manage him rather than listen to him. Session 15 closed him to a tenth of first. In Session 16 he ceded the plan, kept the crisis and asked before moving a teammate, and described his own standing in new words: "*I'm just the if it all goes to hell.*"

SESSION 17 **8.4 → 8.2 (−0.2)** "*Captain,*" and then two teammates walked past him. He deferred to Quasar-Force in the maze and lost the door. **The gap to first is now half a point.**

3 Quasar-Force 7.4

ALL-TIME Indispensable capability and the team's actual brain, socially positioned as the little brother. A founding member of the League offered him sanctuary; the room still talks about him as "*our smarts*" and as "*that kid that looks like he is like 12.*" **Value very high; status capped by the way the room talks to him.**

SESSION 17 **7.2 → 7.4 (+0.2)** "*You're the brains,*" from the person whose word has carried most, and a maze run on his answers. The cap was in the same sentence ("*our youngest*").

4 Edge 4.8

ALL-TIME Ahead of Intrepid on his first afternoon: greeted as "*somebody competent*" before he had done anything, and by the end of Session 16 his call had set the plan and his shot had ended the brood's objective. He had not yet been in a room where the team disagreed.

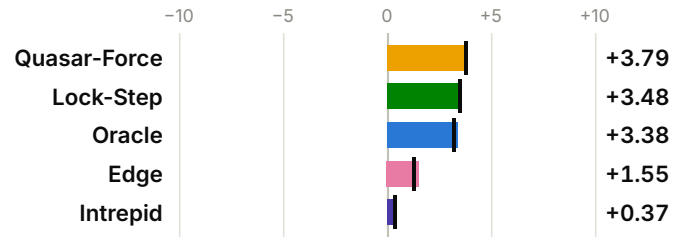

SESSION 17 **4.5 → 4.8 (+0.3)** Now he has. The first disagreement on his file was with the de facto leader, on the most serious question the team has, and he was not cowed. He did not win it either.

5 Intrepid 3.3

ALL-TIME Beloved and essential in the line, and weightless in decisions. In Session 16 the first decision he held against Lock-Step was about himself.

SESSION 17 **3.0 → 3.3 (+0.3)** **The first session in which his decisions carried other people with them.** Small, and it counts here now.

§4 Combat Power / Ability / Value

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

A note on this section this revision. **Session 17's fight is the shortest on record: a Marvel round and one round before the session paused.** It was a staged bout. The hosts wanted at least thirty seconds of fighting, and the two teams agreed to split it into one-on-one pairings, chosen mostly by Earth X357:

- **Lock-Step v Briar Patch**, a plant controller whose barrier pushed him back and whose branches grabbed Quasar-Force.
- **Intrepid v Capricorn**, a horned brick who opened with a Marvel ram for 72.
- **Edge v Four-Fold**, a four-armed telepath.
- **Quasar-Force v Pink-Shift**, a shape-shifter with Swap Places, a teleport, healing and Lightning Actions.
- **Oracle v Facade**, a power copier who had already copied him.

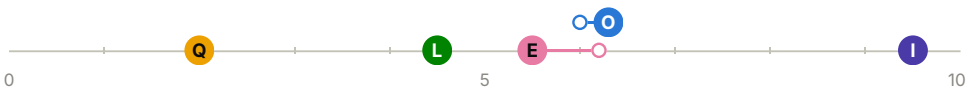

What happened before the pause:

- **Edge** blasted Four-Fold twice in the Marvel round (the second a Marvel for 86) and knocked her out, then sat down in the stands. Facade's reaction Suppressive Fire stunned him for 34 Focus.
- **Pink-Shift** brought Four-Fold back from −29 to 1 with two heals, and **Quasar-Force** threw him out of the arena into the staging room.
- **Oracle** hit Pink-Shift for 15 Focus, then swung at Facade in melee and was parried into 34 damage and a stun; his Return Fire took 15 Focus off her first.
- **Lock-Step** hit Briar Patch for 42, was pushed back, teleported to the stands and was frozen for a turn by a penalty.
- **Intrepid** was rammed prone for 72, got up, and missed.

Most of this section's movement is the two sheets. Edge's rebuild moved 15 of his 22 combat scores and Oracle's advances four of his; play moved four, all on doctrine (§4.17, §4.18). The fight also tested several things this document has been carrying:

- **The counter-build against Oracle** was not used, and a fourth way to beat him was: his own kit, worn by somebody else.
- **The healing backup** (Lock-Step's hex-heal) was not needed, for a third session; the healer emptied himself before the bout instead.
- **Edge's senses against obscurement** were not tested.
- **Quasar-Force's Energy Absorption** has still not been bought, and nothing in the bout hit his Health.

4.1 Durability, Defense & Sustain — Health / Physical

1 Intrepid 9.5

ALL-TIME Best in every column: the largest Health pool on the team (210), H-DR 3, physical defences of 20/20/20, a Healing Factor that returns 7 Health every turn, Immovable and Enduring Constitution. **He is the only member who can absorb a bad round and simply keep standing**. Session 16 was the first fight in which that was not enough: 290 damage by the log's count, his Sturdy stolen for two rounds, and two knockdowns, to −3 and to −49.

SESSION 17 **holds at 9.5** Capricorn's opening ram rolled a Marvel before its edge, so Karma could not touch it. It did 72 and put him prone, and Capricorn took 24 in recoil. He stood up and swung. Holds.

2 Oracle 6.3

ALL-TIME 90 Health looks fragile and isn't. **Real Jinx imposes trouble on every direct attack against him, permanently**, stacked with H-DR 3, Charmed Life, Danger Sense, a Healing Factor of 3 a turn, and Healing Hands, which converts his own Focus into his own Health. In Session 14 his body was never attacked. In Session 16 it was, and it lost: 28 and then a Marvel Banging Heads for 72, down at −2, and up the next round on his own healing.

SESSION 17 **6.0 → 6.3 (+0.3)** ADVANCE Agility 5 lifts his Melee and Agility defences to 18 through Evasion and Sturdy 3. The one hit he took in Session 17 came through all of it anyway: his copy's Point-Blank Parry, for 34 and a stun. Real Jinx makes direct attacks on him harder, and a reaction to his own swing is a hard thing to jinx. **He passes Edge.**

3 Edge 5.5

ALL-TIME On the Session 16 sheet: 90 Health, H-DR 2, physical defences 19/19/15, a Healing Factor of 3, and Slow-Motion Dodge, which worked three times in four. He took 102 damage, including glitch bombs for 37 and 43 that ignored his damage reduction, went down at exactly 0, and got up on the healing factor.

SESSION 17 **6.2 → 5.5 (−0.7)** RE-SPEC Sturdy 3 replaces Sturdy 2 (H-DR 3; defences 19/19/16), and the two things that kept him up in Session 16 are gone: the healing factor and the dodge. He was one of the two Titans who did not wake on their own. **A sound mid-weight body with no sustain.**

4 Lock-Step 4.5

ALL-TIME Feast or famine. Protection Hex routes everything to Ego 20, which is functionally unhittable against most opposition. When something does land, 60 Health with H-DR 0 (1 under the Hex) evaporates. **His best armour is discipline**, and a teleporting phaser in Session 16 beat it with one Marvel-20 glitch bomb, 60 to −24.

SESSION 17 **holds at 4.5** The famine in miniature, by request: Edge's punch did 15 and took him "*nearly back down to zero*" while the Hex was down. "*That defensive spell... I definitely don't ever want to take that off.*" In the arena the plant barrier pushed him back without hurting him. Holds.

5 Quasar-Force 2.0

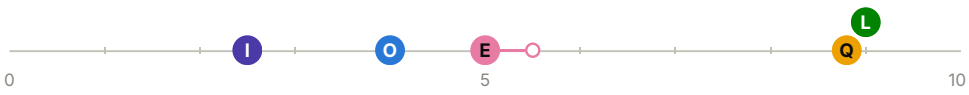

ALL-TIME 60 Health, no healing factor and no self-heal. He has finished sessions at 1, 4, −11, −12 and −30 Health. **There is no version of this axis where a character who can be removed from full to unconscious by one strike is not last.** Session 15 put Sturdy 3 in the nanosuit (H-DR 3, defences 19/19/15). In Session 16 neither knockdown was decided by it: a Marvel and a reaction strike came through his damage reduction, and a glitch bomb ignored it.

SESSION 17 **holds at 2.0** He took no Health damage in the session. He was restrained instead, by Briar Patch's branches. Holds.

Roadmap note: RULING With Sturdy 3 in the nanosuit, Telekinetic Protection is closed to Quasar-Force by house rule. Energy Absorption, on his Rank 3→4 plan, converts Health damage after damage reduction into Focus, and it remains the single highest-leverage purchase on the team's board. Session 17 added nothing for or against it.

4.2 Durability, Defense & Sustain — Focus / Mental

Focus pool, Focus damage reduction, mental defences, and demonstrated resistance to psychic attack.

1 Lock-Step 9.0

ALL-TIME The best demonstrated mental defence on the team. His Ego defence is 20 at baseline, and **Protection Hex routes every incoming attack and effect through it**, so there is no soft angle. His F-DR of 3 is tied for the highest on the team, and Argent's mind control failed against him twice. The cracks: a 90 Focus pool that can be drained fast, and since Session 15 the first logged entry past the Hex.

SESSION 17 **holds at 9.0** His hexed telepathic link went looking for Blitzkrieg and found no mind to reach. That is not a defence; it was the first sign that they had left the dimension. Nothing attacked his mind. Holds.

2 Quasar-Force 8.8

ALL-TIME A 180 Focus pool and a record that cuts both ways: Viral failed to get in, and Psyche made contact at will. Session 15's circlet put a lock on the door — Uncanny 3 for **Vigilance 18, Ego 20 via Integrity, Logic 20 and F-DR 3** — and in Session 16 the lock held on its first test, against a power thief.

SESSION 17 **holds at 8.8** No mental attack. The one strain was internal: "*trouble concentrating... something about the buzzing*," and a box in distress that he could not calm. VOLATILE Whether the buzzing is the dimension, the nullifier banks or the box, nobody knows. *Closest call:* Lock-Step over Quasar-Force by 0.2, unchanged.

3 Edge 5.0

ALL-TIME A middle profile on the Session 16 sheet: Focus 90, F-DR 2, Vigilance 15 and Ego and Logic 16. Nothing attacked his mind.

SESSION 17 **5.5 → 5.0 (−0.5)** RE-SPEC Two defences up and one down. Ego and Logic rise to 18 (Uncanny 1, with Wisdom on Logic); Vigilance falls to 13, the lowest on the team; F-DR falls to 1. **The first mental-track hit of his file went through the low door:** Facade's reaction Suppressive Fire, a Marvel, 34 Focus and a stun.

4 Oracle 4.0

ALL-TIME The most lopsided profile in the section: Focus 180 and Vigilance 16 against **Ego defence 10** and F-DR 0. Session 14 emptied him without using the soft door, and in Session 15 a telepath got in without visible effort. **F-DR 0 against a repeating drain is an open tap.**

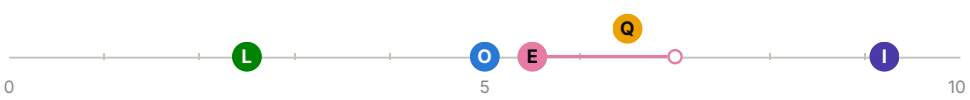

SESSION 17 **holds at 4.0** ADVANCE The two advances are declared, and neither is Uncanny. The FLAG this entry carried for three revisions resolves to no change: the soft door is still ten points below the top two. Nothing attacked his mind; his module, again, reacted to a transfer between places before he did (2.1).

5 Intrepid 2.5

ALL-TIME Ego 11 and Logic 11 are the weakest pair of mental defences on the team, partly offset by Iron Will and Fearless, which are real mechanical resistances, and F-DR 1. He survives mental pressure by being stubborn rather than defended. The progenitor's link in Session 15 and the stolen Sturdy in Session 16 both came in through this side.

SESSION 17 **holds at 2.5** A telepath linked to him mid-bout to ask whether he was all right, and he let her. A Telepathic Link can be refused by anyone who does not want it. Not an attack. Holds.

4.3 Stamina & Resource Efficiency

1 Intrepid 9.2

ALL-TIME 90 Focus and almost nothing to spend it on: Clobber, Banging Heads, Crushing Grip and Immovable are free, and only Smash and Ground-Shaking Stomp cost. His Healing Factor returns 7 Health a turn against a 210-Health pool. He can fight all day; in Session 16 the healing factor worked on him while he lay unconscious at −49.

SESSION 17 **holds at 9.2** It woke him in the bunk room. Nothing in the bout tested it.

2 Quasar-Force 6.5

ALL-TIME The largest Focus pool on the team at 180, driving a cheap core loop (Grab 5, Attack 5, Barrier 5, Crush 10). **His limiting resource isn't Focus, it's Health.** He ended Session 14 with a nearly full Focus pool and −12 Health, and Session 16 ran the demonstration twice.

SESSION 17 **holds at 6.5** Grab and toss in one action; Focus was never the question.

3 Edge 5.5

ALL-TIME **The cheapest kit on the team to run**, on the Session 16 sheet: Suppressive Fire, Double Tap and Slow-Motion Dodge cost nothing, and only Stopping Power cost 5. On 90 Focus with a healing factor he could shoot every round of any fight the team has had, and in Session 16 he did.

SESSION 17 **7.0 → 5.5 (−1.5)** RE-SPEC The cheapest kit on the team became a costed one.

- **Elemental Burst** is still free.
- **Elemental Blast**, his signature, costs 5 Focus or more, and scales at +1 damage for every 2 Focus spent; Lightning Actions lets him fire it twice a round.
- **Supernova** costs 15 and up.

On a 90 Focus pool, with F-DR 1 and no healing factor, that is a sprinter's budget if he spends it the way his kit invites. Still third, ahead of Oracle's medical budget.

4 Oracle 5.0

ALL-TIME 180 Focus, and he is the team's battery: every point of Healing Hands is a point of Focus, spent alongside Let's Go, Never Surrender, Return Fire and Precognition. In Session 9 he deliberately under-healed a teammate to keep reserves for a raid. In Session 14 an opponent worked out that draining him is worth more than hitting anyone, and did. In Session 16 the battery lasted a fight that put every member of the team below zero.

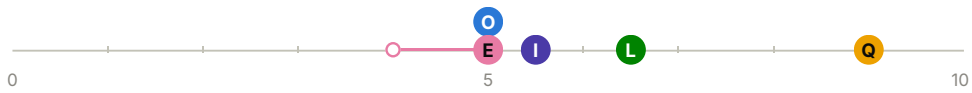

SESSION 17 **holds at 5.0** RETCON The last edition credited him with heals at the end of Session 16 that did not happen there. What the log now shows is better evidence of the same thing. After seven rounds, an abduction and an unknown interval he still had about 125 Focus, and he spent 120 of it in the bunk room getting two teammates up. That left 5 of 180, and a day of sleep to refill it. Holds.

5 Lock-Step 2.5

ALL-TIME A 90-point pool, tied for the shallowest, against the hungriest demands: Protection Hex at 10, Powerful Hex at base cost plus 5, Chain Strikes at 5, and teleports at 10 to 15. **He is a sprinter.** In Session 16 the pool was exactly as deep as the extraction and not a point deeper.

SESSION 17 **holds at 2.5** A Powerful Hex link that found nobody, a Phase Self for a handshake, Protection Hex for the orbs, two maze teleports for the team and a Chain Strike, on a day that started with a full rest. Holds.

4.4 Crowd Control & Area Denial

1 Quasar-Force 9.0

ALL-TIME The most flexible controller by a distance. Telekinetic Barrier spans two spaces per rank, absorbs anything doing 10 or less, and lets him choose which side of it a target ends up on. Telekinetic Grab has a **break-out target number of 20**, which most opponents cannot roll. In Session 16 his grab held the brood's first target through her own force field until Lock-Step finished her.

SESSION 17 **holds at 9.0** He grabbed the enemy healer and threw him out of the arena into the staging room in one action. Then Briar Patch grabbed him with branches, and the session paused before he tried to escape. Holds.

2 Lock-Step 6.5

ALL-TIME Broad and inconsistent: ice control, paralysis riders on chain-whip hits, a Powerful Hex sleep effect that took Aegis-Girl out of a fight entirely, and Teleport Other for removing enemies or extracting allies. The output depends on the hex configuration and the die.

SESSION 17 **holds at 6.5** No control used. He struck, and a plant barrier pushed him back.

3 Intrepid 5.5

ALL-TIME Denial by physics. Ground-Shaking Stomp prones everything within reach plus rank on a Fantastic, Banging Heads takes two, Crushing Grip holds one, and Immovable makes him a wall that cannot be repositioned. In Session 16 Banging Heads collapsed a force field.

SESSION 17 **holds at 5.5** No stomp. He was the one knocked prone.

4 Oracle 5.0

ALL-TIME Zone control by threat rather than by physics: Suppressive Fire stuns on a Fantastic, Return Fire punishes anyone who declares against him, and held overwatch actions have frozen reinforcements in a hallway. In Session 16 the stuns landed — a super-Marvel on Argent and two on Dragonborne — and a demoralise drove the brood's strongest body out of the fight.

SESSION 17 **holds at 5.0** One Suppressive Fire and one Return Fire, 15 Focus each, and no stun. Holds.

5 Edge 5.0

ALL-TIME On the Session 16 sheet he carried the same Suppressive Fire as Oracle at ×7, which did 49, 27 and 31 Focus, and none of it rolled the Fantastic that stuns. No other control.

SESSION 17 **4.0 → 5.0 (+1.0)** RE-SPEC He traded the Suppressive Fire for area denial. Supernova (Force) reaches every enemy within ten spaces, and on a Fantastic each of them suffers Force's effect: trouble on every action for a round. Elemental Blast's Fantastic carries the same rider on one target. No grab, no barrier, and no Supernova thrown yet.

Tie: Oracle over Edge at 5.0, broken on record: Oracle's stuns have landed, and Edge's area effect has not been used.

4.5 Grappling & Restraint

1 Quasar-Force 9.5

ALL-TIME **Telekinetic Grab's break-out target of 20** makes it soft removal rather than a hindrance. He has held Aegis-Girl, White-Out, Argent and Stote, and taken contested artifacts out of thieves' and a goddess's hands. In Session 16 he grabbed Argent through her force field, crushed Stote unconscious, and heard the brood say that grappling was why it went for him first.

SESSION 17 **holds at 9.5** Pink-Shift was grabbed and thrown in one action. **For the first time on record somebody grabbed him back**: Briar Patch's branches, mid-round. RULING Telekinesis exerts physical strength, so his Logic can stand in for Melee on the escape — the most favourable ruling in the campaign, for him. The pause came before he tried it.

2 Lock-Step 6.7

ALL-TIME The handcuff ritual is restraint as doctrine, and it works: Nova and Ghost-Ape cuffed themselves voluntarily. His chain-whip paralysis riders have landed repeatedly, and Melee 7 adds to both halves of the axis. In Session 16 Argent began to accept the cuffs before her controller reasserted itself.

SESSION 17 **holds at 6.7** No cuffs were offered; the one-on-one framing had no place for them. Holds.

3 Intrepid 6.3

ALL-TIME Crushing Grip at ×7+7, single-target and without finesse. For twelve sessions nothing got out; then it failed twice, against Umbra and against Ecliptica's force field. In Session 16 Banging Heads collapsed the force field his grab never found an answer to.

SESSION 17 **holds at 6.3** No grab.

4 Edge 3.0

ALL-TIME On the Session 16 sheet, a marksman with no grapple tools and Melee 0, and a Melee defence of 19 that made him hard to grab.

SESSION 17 **2.0 → 3.0 (+1.0)** RE-SPEC The escape half improved sharply: Melee 6 with Brawling, and under the house rule Force elemental control can stand in for Melee on escapes, from his Ego 7. He still has nothing to hold anyone with.

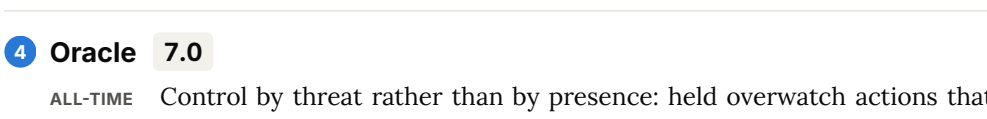

5 Oracle 1.5

ALL-TIME A ranged attacker with no grapple tools; Suppressive Fire pins a position, not a person. In Session 14 Ecliptica grabbed him twice and still had him when she left: "*Oracle has no ego or logic based powers that project strength so he only has his melee of −1 to use for escaping the grab.*"

SESSION 17 **holds at 1.5** ADVANCE FLAG CLOSED The advances bought Agility and Accuracy. **The escape power is not on the sheet, and with his Rank 3→4 track now complete, it cannot arrive before Rank 4.** This entry was understating nothing.

4.6 Objective Control

Taking and holding ground, protecting a point, denying a location.

1 Quasar-Force 9.3

ALL-TIME Barriers spanning two spaces per rank, placed at will. **Nobody else on the team can create terrain.** In Session 14 his method against a theft — pick the objective up and put it where the enemy is not — was correct, and Phase Object beat it. Since Session 15 the tower's shield denies the Titans' floors to teleporters while nobody stands on it.

SESSION 17 **holds at 9.3** In a one-on-one the objective is the opponent, and he removed his from the arena. Holds.

2 Intrepid 8.0

ALL-TIME **Immovable is objective control as a physical law.** He stands where the objective is, cannot be repositioned, and clears everything near it with a stomp. In Session 16 Argent's sphere pushed Oracle out and did not move him.

SESSION 17 **holds at 8.0** Capricorn's ram put him prone; Immovable answers knockback, not a fall. Holds.

3 Edge 7.0

ALL-TIME **He decided the Session 16 objective.** The brood came for a device, and when Blitzkrieg was one turn from phasing out with it, he shot it out of her hand — with trouble for the disarm — and destroyed it. At the end he held off Blitzkrieg alone so the extraction could start.

SESSION 17 **7.5 → 7.0 (−0.5)** RE-SPEC The called shot that decided Session 16 belonged to a kit he no longer has: Accuracy 4 on a disarm. What he has instead is area denial — a ten-space Supernova that makes standing near an objective expensive.

4 Oracle 7.0

ALL-TIME Control by threat rather than by presence: held overwatch actions that froze reinforcements in a hallway, and Real Jinx making approach a losing proposition. In Session 12 he interposed to keep the Celestial Core's containment standing; in Session 14 the enemy made *him* the objective; in Session 16 he drove off the one member of the brood who had found the device.

SESSION 17 **holds at 7.0** He was swapped next to a copy of himself and lost the exchange. Holds.

5 Lock-Step 5.0

ALL-TIME Superb at *contesting* objectives and poor at holding them. He arrives instantly anywhere and leaves the same way.

SESSION 17 **holds at 5.0** He struck, was pushed back, and retreated to the stands.

Tie: Edge over Oracle at 7.0, broken on record: the one objective this team has had decided at range was decided by Edge.

4.7 Reaction / Response Speed

Initiative, reactions, interrupts, and acting before the enemy does.

1 Oracle 9.5

ALL-TIME Not close. The module's Danger Sense guarantees him a turn in the bonus round of every combat, and he runs Combat Reflexes, Return Fire, Charmed Life and Precognition 1 — he acts on information the enemy has not generated yet. In Session 16 an enemy found the first counter: Dragonborne spent his own reaction redirecting Oracle's Return Fire onto Lock-Step.

SESSION 17 **holds at 9.5** Bonus round as always, with a Suppressive Fire on Pink-Shift, and Return Fire went off before Facade's stun landed. The counter this time was his own reaction set, worn by somebody else. Pink-Shift swapped him into position before he moved, and Facade's Point-Blank Parry answered his swing. Holds.

2 Edge 8.5

ALL-TIME On the Session 16 sheet: Combat Reflexes, Situational Awareness and Slow-Motion Dodge, a free reaction that put trouble on attacks against his Agility defence and worked three times in four.

SESSION 17 **7.5 → 8.5 (+1.0)** RE-SPEC **Lightning Actions changes what his reactions are.** It turns his initiative Marvel die into a Fantastic, so he is always in the bonus round. Once a round it lets him take a standard action as a reaction: a second Elemental Blast, or anything else. In Session 17's Marvel round he used both halves — in first, two blasts, one knockout. He lost the dodge and Situational Awareness. **Second, behind only Oracle, and past Lock-Step.**

3 Lock-Step 8.0

ALL-TIME Blink as a reaction negates an attack outright, and Quick Phase via hex adds another interrupt layer. In Session 14 he was never punished for four turns of teleport-in and strike; in Session 16 a teleporting enemy reached him first, outside the warehouse.

SESSION 17 **holds at 8.0** He phased his hand through a handshake before it could be touched, which was the right reflex in front of a power copier. Holds.

4 Quasar-Force 5.5

ALL-TIME Vigilance 5, permanent flight, and Evasion converting Agility attacks onto a high Melee defence. Fast in position, with no reaction powers to spend; the circlet raised his Vigilance *defence*, which makes him a harder target, not a faster actor. In Session 16 he rolled the first Marvel initiative of his career and spent the bonus round being hit.

SESSION 17 **holds at 5.5** He acted after Pink-Shift and Oracle, and was grabbed before he could do more. Holds.

5 Intrepid 3.0

ALL-TIME Agility 0 and a Vigilance defence of 14. He is the last to act and the hardest to move once he has.

SESSION 17 **holds at 3.0** A Marvel ram landed before its edge, the one case where Karma cannot help, and his swing missed. Holds.

4.8 Personal Mobility & Positioning

1 Quasar-Force 9.5

ALL-TIME Flight 2 is unmatched: combat speed at base × rank, and non-combat speed at **base × rank × 50**. He hovers permanently out of melee reach, and nobody else operates in three dimensions by default. In Session 14 and again in Session 16 he showed that positioning is a choice, not a property.

SESSION 17 **holds at 9.5** "*Everyone just flies over the shifting rocks room.*" At the door he was frozen for a minute by a penalty — the first time anything but a knockdown has stopped him moving — and in the arena branches held him. Holds.

2 Lock-Step 8.0

ALL-TIME The best *tactical* repositioning in the party, if not the fastest. Blink negates attacks, Teleport 1 covers rank × 10 in combat, and Teleport Blind reaches places he has never seen. In Session 16 the one position that failed him was the one he chose to rest in.

SESSION 17 **holds at 8.0** The teleport home failed ("*out of range*"); the teleports through the maze worked. Holds.

3 Intrepid 4.5

ALL-TIME Flight 1 at base × rank. Agility 0 caps the finesse; in Session 14 he considered punching through a floor to chase a phaser, which is the exact shape of his mobility problem.

SESSION 17 **holds at 4.5** He flew over the rocks room and walked the stepping puzzle.

4 Edge 2.0

ALL-TIME No movement power on the Session 16 sheet, and Agility 7 made him quick on foot: he shot and stepped away all fight. The roster's *Spatial Infiltrator* role had nothing on the sheet to support it.

SESSION 17 **2.5 → 2.0 (−0.5)** RE-SPEC All seven points of Agility moved to Melee and Ego, and the roster dropped *Spatial Infiltrator* from his role. Still no movement power; he walked to the stands after his knockout. Still above Oracle.

5 Oracle 1.5

ALL-TIME No mobility power at all: Agility 4 at the time, and one STAR Labs acrobatic roof-jump. He walks, and it has cost the team tempo more than once; in Session 16 his only moves besides running were Lock-Step's.

SESSION 17 **holds at 1.5** He was moved twice by Pink-Shift's Swap Places: once next to his copy, and once in a shell game that left the arena unsure which Oracle was which. Holds.

4.9 Team Mobility & Positioning

1 Lock-Step 9.8

ALL-TIME Overwhelmingly. He is the team's strategic mobility layer. Teleport Together has inserted the entire team into a fortified lab, extracted teammates mid-fight, lifted Robin off a sacrifice altar, cleared a bank of hostages, and in Session 13 reached a facility he had never seen using a drone camera feed. In Session 16 he used it three ways in one fight, and asked first.

SESSION 17 **holds at 9.8** **The first time his way out failed.** Asked to teleport the team back to the warehouse, he found the target out of range — "*Oh fuck.*" Then he moved everyone across the swinging chain-ball room and past the robot guarding the galaxy room. The failure was the dimension, not the power. Holds.

2 Quasar-Force 6.5

ALL-TIME Not transport, but the highest-value *positioning* asset: the telekinetic nudge that converts a teammate's miss into a hit, decisive in at least nine engagements, plus placing Oracle where he asks to be placed and funnelling enemies with barriers.

SESSION 17 **holds at 6.5** The maze's route was his, and so was the keypad; his nudge on Intrepid's Clobber did not land it. Holds.

3 Oracle 4.0

ALL-TIME Positioning as an information service: precognitive warnings broadcast before contact, and explicit guidance that has set up some of the team's best attacks. In Session 16 his module steered Intrepid's stomp onto the right enemy.

SESSION 17 **holds at 4.0** Intuition named the copier before the bout, and "*Don't shoot that other Oracle*" kept the team's shots off him. Holds.

4 Intrepid 0.5

ALL-TIME He moves himself only.

SESSION 17 **holds at 0.5** He walked through the colosseum door first.

5 Edge 0.5

ALL-TIME He moves himself only. His Session 16 rear guard is scored in 4.6 and 4.19.

SESSION 17 **holds at 0.5** Nothing changed.

Tie: Intrepid over Edge at 0.5. Nothing separates them, and the existing order stands.

4.10 Single-Target Damage

Multiplier-plus-add convention; expected values use a Marvel-die mean of 4.33 and exclude Fantastic doubling, edges, assists, and Focus investment.

PC	Attack ability	Multiplier + add	Avg damage / hit	On a Fantastic
Intrepid	Melee	×7 +7	**37.3**	49 (98 doubled)
Edge	Ego (ranged Force)	×7 +7	**37.3**	49 (98 doubled)
Quasar-Force	Logic	×7 +7	**37.3**	49 (98 doubled)
Lock-Step *(whip)*	Melee	×6 +7	**33.0**	43 (86 doubled)
Oracle	Agility	×5 +5	**26.7**	35 (70 doubled)
Lock-Step — unarmed	*Melee*	*×3 +7*	*20.0*	*25 (50 doubled)*

Smash and Elemental Blast both add +1 to the add for every 2 Focus spent, so the first two rows are the floor of what Intrepid and Edge can do with a Focus investment.

1 Edge 9.5

ALL-TIME On the Session 16 sheet: ×7+7 at range off Agility 7 with Accuracy 4, and Stopping Power as his Signature Attack. One Stopping Power put 101 into Stote in one action, and another Marvel knocked out Blood Blade.

SESSION 17 **9.0 → 9.5 (+0.5)** RE-SPEC **The same base line, with Smash's scaling and a second shot.** He is now Ego ×7+7 through Elemental Blast:

- **Two edges**, the Blast's own and Signature Attack's — the house rule's maximum.
- **+1 to the damage bonus for every 2 Focus spent**, exactly the property that kept Intrepid ahead last revision.
- **A second Blast each round**, as a reaction, through Lightning Actions.

In Session 17's Marvel round two blasts, the second a Marvel for 86, took Four-Fold from full to −29. **First on the axis — the first time Intrepid has not held it.**

2 Intrepid 9.2

ALL-TIME A ×7 multiplier, and **Smash is the differentiator: +1 to the add for every 2 Focus spent, with a built-in edge**, on a Focus pool that is otherwise nearly idle. He has the highest floor, a top-two ceiling, and most of the knockouts on named opposition; in Session 14 a Marvel on Umbra removed the hammer-wielder in one action. In Session 16 the fight's knockouts went to others.

SESSION 17 **holds at 9.2** One Clobber at Capricorn, assisted by Oracle and nudged by Quasar-Force, and it missed; Capricorn pretended to be hurt anyway. Second for the first time, because the newcomer now has his scaling and fires twice.

3 Quasar-Force 8.7

ALL-TIME ×7+7 off Logic 7, tied for the best base line, delivered at five spaces per rank. Telekinetic Attack doubles and stuns on a Fantastic, and Grab into Crush chains in a single round; he is held back by what he targets and by Crush needing the grab first. In Session 16 one crush finished Stote.

SESSION 17 **holds at 8.7** The toss did 28 to Pink-Shift. Holds.

4 Lock-Step 7.8

ALL-TIME **The ×6 is not his, it is the whip's**: his base multiplier is ×3. What he does hold is **the highest Fantastic rate in the party**: Chain Strikes carries an edge, Signature Attack adds a second, and Combat Trickery guarantees a 1 on the Marvel die once per battle. In Session 16 the spike landed on people: 84 and a knockout on Argent, and 69 on Blood Blade.

SESSION 17 **holds at 7.8** A 42-point Chain Strike on Briar Patch before the plant barrier pushed him off. Holds.

5 Oracle 4.0

ALL-TIME The lowest line on the team, and **first for Focus damage rather than Health**: Suppressive Fire and Return Fire attack a different resource entirely. In Session 14 Ecliptica refunded it by draining him; in Session 16 nobody did, and the stuns and the demoralise it produced are scored in 4.4 and 4.14.

SESSION 17 **3.5 → 4.0 (+0.5)** ADVANCE Agility 5 and Accuracy 2 make his line ×5+5, an expected 26.7 against 21.3. Still last by almost four points, and still mostly Focus damage: in Session 17, 15 into Pink-Shift and 15 into Facade.

Closest call: Edge over Intrepid by 0.3, on identical base lines. Edge's two edges and second blast are set against Intrepid's record, and one turn of the new kit is a small sample.

4.11 Area-of-Effect Damage

1 Intrepid 9.6

ALL-TIME Ground-Shaking Stomp checks Melee against the Agility defence of every target within reach plus rank in spaces. It has removed six monsters in one attack, then four more, then a room of mobsters, then every Lex-Corp guard in an alley. Banging Heads takes two at full damage. Until this revision he was the only member with a real area attack.

SESSION 17 **holds at 9.6** Not used. "*Let's go* AOEs. *Let's go*," he said, and then reminded the team that area attacks hit everyone in them. Holds, and no longer alone.

2 Edge 8.5

ALL-TIME On the Session 16 sheet, single-target only: three attack powers, each taking one target.

SESSION 17 **0.5 → 8.5 (+8.0)** RE-SPEC **The team's second area attack, and on paper the better-shaped one.** Supernova (Force) is an Ego check against the Resilience defence of every enemy within ten spaces. It does half damage on a success, and full damage plus Force's effect on a Fantastic, with +1 to the damage bonus for every 2 Focus over its 15-Focus floor. Against Intrepid's stomp it reaches more than twice as far, and it is worded to hit enemies only. **The largest single-axis move in the document's history**, and none of it tested: he did not throw it in Session 17 ("*I have* AOEs, *but we were supposed to go* 1v1?"). Second, 1.1 behind the member who has removed six monsters with one stomp.

3 Lock-Step 3.0

ALL-TIME Elemental Burst is functionally single-target, and whatever area effect he brings comes out of a Powerful Hex configuration that costs a turn to set up.

SESSION 17 **holds at 3.0** Nothing changed.

4 Quasar-Force 1.0

ALL-TIME **Effectively zero.** Telekinetic Toss damages the thrown person and one target, and that is the whole list. Nothing on his Rank 3→4 plan closes the gap.

SESSION 17 **holds at 1.0** He did exactly that: Pink-Shift thrown, and nobody else hit.

5 Oracle 0.5

ALL-TIME Single-target ranged only.

SESSION 17 **holds at 0.5** Nothing changed. Last again, now that the newcomer has an area power.

The second-widest first-to-second gap in the section closes from 6.6 to 1.1. For three revisions this axis said the team's entire area-damage capability was one person's stomp. **On paper it is now two people's.**

4.12 Ranged Combat / Engagement

1 Edge 9.4

ALL-TIME First on arrival in Session 16, on the old sheet: Accuracy 4, a ×7 line, three ranged attack powers and the Cutting Edge. His best shot was not damage — with trouble for disarming a hand-held item, he shot the device out of Blitzkrieg's hand at the wall and destroyed it. **He also answers, on paper, the counter that beat Oracle in Session 14**: Heightened Senses 2, the profile that saw through invisibility and fog when Exemplar II had it.

SESSION 17 **holds at 9.4** RE-SPEC **A different rifle at the same rating.**

- **Out:** Accuracy 4, Stopping Power, Double Tap, Suppressive Fire and the Cutting Edge.
- **In:** Elemental Blast and Burst at ten spaces, two edges on the Blast, and a second Blast per round.

Heavier and faster, shorter-ranged and blunter: the called shot is gone. Heightened Senses 2 stayed, so the obscurement answer is still on paper. One turn of evidence: two hits, one knockout.

2 Oracle 9.2

ALL-TIME For fifteen sessions the team's dedicated ranged specialist: Suppressive Fire stunning on a Fantastic, Return Fire punishing anyone who declares against him, and held-overwatch discipline in every engagement. Session 14 showed the quality (the module let him hit an *invisible* opponent) and the counter: **a ranged specialist with no mobility is a turret, and Session 14's opponent fogged the turret and then bolted it to the floor.** In Session 16 he lost first place without losing anything.

SESSION 17 **9.0 → 9.2 (+0.2)** ADVANCE Accuracy 2 and Agility 5 give him better odds and a heavier line. The two tenths are what the sheet earned. What play did was a melee swing at a copy of himself, which is scored in 1.5. **Second by two tenths.**

3 Quasar-Force 8.5

ALL-TIME **Everything he does happens at five spaces per rank**, which makes him the most consistently ranged member of the team without a single ranged *attack* trait: Telekinetic Attack, Grab, Barrier and Toss all reach.

SESSION 17 **holds at 8.5** The grab-and-toss went in at range. Holds.

4 Lock-Step 5.0

ALL-TIME The chain whip has reach and Elemental Burst projects, but his kit wants him in the target's face, and he obliges.

SESSION 17 **holds at 5.0** In, strike, pushed back, out.

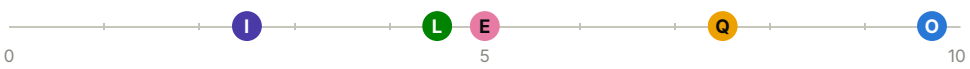

5 Intrepid 1.0

ALL-TIME No ranged option whatsoever. He flies to the problem and hits it.

SESSION 17 **holds at 1.0** Nothing changed.

4.13 Support — Ally Buff

Powers and actions that make teammates measurably better.

1 Oracle 9.7

ALL-TIME The team's only dedicated buffer, and the margin is enormous. **Let's Go** kept Quasar-Force conscious and acting at −11 Health. **Never Surrender** pulled Intrepid out of a demoralised stun. **Danger Sense** guarantees him a turn in every bonus round, usually spent on somebody else. Since Session 15 his module also resonates with Lock-Step's powers. In Session 16 Let's Go was the hinge of the fight.

SESSION 17 **holds at 9.7** In the bout, one assist on Intrepid's Clobber, which missed. RETCON The withdrawn hand-wave also clarifies how the Session 16 extraction ran. Lock-Step was unconscious at −24 and moving only on Let's Go, and when Oracle's module put him down at the staging point, Lock-Step went down with him. **That is the strongest version yet of what this axis measures.**

2 Quasar-Force 7.5

ALL-TIME No buff *powers*, and nonetheless the second-best buffer on the team: the telekinetic nudge that turns a teammate's miss into a hit is a pure action-economy gift, decisive in at least nine engagements. The nudges need him upright.

SESSION 17 **holds at 7.5** One nudge, on the Clobber that missed.

3 Edge 5.0

ALL-TIME No buff powers, and two assists in Session 16 that each decided something; one turned Intrepid's Marvel miss into a hit that stunned Blood Blade and gave Intrepid his Sturdy back.

SESSION 17 **holds at 5.0** No assists; he spent the round after his knockout stunned. Holds.

4 Lock-Step 4.5

ALL-TIME Powerful Hex can be configured into buff-adjacent effects, and Teleport Together is force projection of a kind. It is real but occasional, and it always costs him the turn.

SESSION 17 **holds at 4.5** None in the bout.

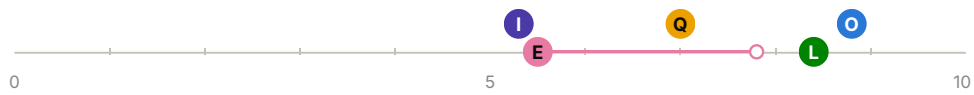

5 Intrepid 2.5

ALL-TIME Immovable holding a line and a body absorbing hits meant for softer people are genuine passive support, not buffs. Session 14 brought the first two active assists of his campaign.

SESSION 17 **holds at 2.5** Nothing changed.

4.14 Support — Enemy Debuff

Effects that degrade enemy capability rather than removing enemy Health.

1 Oracle 8.8

ALL-TIME **Real Jinx imposes trouble on every attack made against him, permanently, with no action cost and no roll.** Suppressive Fire stuns on a Fantastic, Return Fire punishes anyone who declares against him, and his Focus damage degrades enemy capability directly. In Session 16 the debuff that ended the fight was his: the brood's strongest body left on Focus damage, not Health.

SESSION 17 **holds at 8.8** Two Focus hits for 15 each, and no stun. His copy did better with his kit: a Marvel Suppressive Fire that stunned Edge, which is the best evidence yet of what the kit does on a good roll. Holds.

2 Lock-Step 8.4

ALL-TIME The broadest active debuff kit on the team: paralysis riders on chain-whip hits, a Powerful Hex sleep effect, ice control and Disrupt Person. His effects are bigger than Oracle's and need rolls and setup that Oracle's do not. *Closest call* with Oracle for three revisions, and Session 16 settled it Oracle's way.

SESSION 17 **holds at 8.4** No riders recorded.

3 Quasar-Force 7.0

ALL-TIME Control as debuff, and the numbers are brutal: **a grab break-out target of 20** makes Telekinetic Grab a soft removal rather than a hindrance. Barriers deny positioning, and Telekinetic Attack stuns on a Fantastic.

SESSION 17 **holds at 7.0** The toss removed his opponent rather than degrading him.

4 Edge 5.5

ALL-TIME On the Session 16 sheet, **Oracle's tool at nearly twice the multiplier**: Suppressive Fire at ×7 did 49, 27 and 31 Focus and set up the demoralise that ended the fight. His attempt to intimidate the last two of the brood, who were under a controller's orders, did not move them.

SESSION 17 **7.8 → 5.5 (−2.3)** RE-SPEC **The Focus-damage line is gone, and with it most of this score.** What remains:

- **Force's rider** — trouble on every action for a round — on any Fantastic with Blast, or on every enemy within ten spaces with Supernova.
- **Intimidation**, now run off Ego 7 with the Monster trait's edge, which under the house rule makes a target operate as if demoralised for a round.

Neither has been used yet. Fourth.

5 Intrepid 5.3

ALL-TIME Ground-Shaking Stomp prones everything within reach plus rank on a Fantastic, which is mass debuff by physics. Crushing Grip holds one and Banging Heads staggers two. In Session 16 he took his own power back with a Smash Marvel stun.

SESSION 17 **holds at 5.3** Nothing changed.

4.15 Healing

1 Oracle 10.0

ALL-TIME **The only 10.0 awarded in the document.** He is the sole member with a general capacity to restore another person's Health: Healing Hands converts his Focus into their Health one for one, and Let's Go and Never Surrender reverse conditions nobody else can touch. In Session 9 he rationed his own reserves. In Session 14, drained to 3 of 180, he could not heal a teammate at −12: **the monopoly failed once, under load, at the moment it was the only thing that mattered.** In Session 16 the monopoly carried the fight.

SESSION 17 **holds at 10.0** RETCON The post-fight heals the last edition placed at the end of Session 16 happened here instead, and to different people. Quasar-Force got 60, from −15 to 45, and Edge got 60, to 53, leaving Oracle 5 of 180. "*My battery's about gone now, though, Okay?*" **Two of the five no longer have any way to recover on their own**, and one of them had one until this revision.

2 Lock-Step 3.0

ALL-TIME **Session 14 used Powerful Hex's healing potential**: with Quasar-Force at 0 and the medic empty, he configured healing hands and brought him to 5, the second person on the roster ever to restore another's Health. A hex configuration rather than a dedicated power, and dosed to the minimum.

SESSION 17 **holds at 3.0** VOLATILE Not used, for a third session. Whether the backup recurs is still open.

3 Intrepid 2.7

ALL-TIME Healing Factor, the best regeneration on the team, returning 7 Health a turn. Self only.

SESSION 17 **holds at 2.7** It woke him in the bunk room.

4 Quasar-Force 0.0

ALL-TIME **Zero.** No healing factor, no self-repair and no in-combat regeneration of any kind. Outside combat the box's bio-mechanical constructs heal him fast — three hours from −12 to consciousness — but only the in-combat half has ever decided anything.

SESSION 17 **holds at 0.0** He did not wake on his own. Zero for a seventeenth session.

5 Edge 0.0

ALL-TIME On the Session 16 sheet, a Healing Factor at Resilience 3, self only. It got him up from exactly 0 to hold the rear guard.

SESSION 17 **2.0 → 0.0 (−2.0)** RE-SPEC He gave up the healing factor to raise Ego from 6 to 7. Zero: the second member of the team with none, and he did not wake on his own.

Tie: Quasar-Force over Edge at 0.0. The box repairs Quasar-Force outside combat; nothing repairs Edge.

Structural note. One healer and one improvised backup. **The healer now carries two members who cannot recover on their own**, and in Session 17 that cost him all but 5 of his 180 Focus before the bout began. The scenario §10.4's single-healer finding is about — a mentalist takes Oracle out of a fight — is still untested, and the counter-build that drained him in Session 14 has still not been used again.

4.16 Ability to Avoid Collateral Damage

1 Oracle 9.0

ALL-TIME Ranged precision with a Charmed Life edge. He moves nothing, shakes nothing and lifts nothing, and his misses hit a wall. The one stray shot of Session 16 was his Return Fire, redirected by an enemy.

SESSION 17 **holds at 9.0** Nothing stray.

2 Quasar-Force 8.0

ALL-TIME **The most interesting entry on this axis.** His powers are inherently surgical: firearms plucked individually off gang members, a van lifted without disturbing an alley, a sleeping man cuffed without being woken, and three turns of precision work in a gallery of irreplaceable objects in Session 14. Against it, the largest destructive ceiling on the team. **The control is genuinely there; the judgement occasionally isn't.**

SESSION 17 **holds at 8.0** The one piece of property damage in the session was his, and it was not collateral: he pulled a power-nullification projector out of a wall on purpose and drew a penalty for it. The toss put a person exactly where he meant to. Holds.

3 Edge 7.0

ALL-TIME A marksman's profile in Session 16: every attack one shot at one target, the most delicate aimed at a device in a villain's hand. Against it, a power the roster described as "*spatial-severing*" and a backstory that begins with a weapon sliced to pieces. **Precise in his first fight; the ceiling of what he cuts was unknown.**

SESSION 17 **7.5 → 7.0 (−0.5)** RE-SPEC The blasts are still single-target, and Supernova is worded to hit enemies only. But the power summary now describes "*sweeping storms of blades that carve through everything around him at once*," and the precision tool that justified the old score is gone. Half a point for the ceiling.

4 Lock-Step 6.0

ALL-TIME Teleportation is clean, the whip is single-target and his ice constructs are localised. Against: he has proposed setting fires in bushes as a plan, and Berserk removes every restraint at once.

SESSION 17 **holds at 6.0** Clean.

5 Intrepid 2.5

ALL-TIME His signature attack is, by definition, an indiscriminate area effect, and a ×7 multiplier and 301 pounds arriving by air into an enclosed room is a structural event. In Session 16 he used the stomp and it hit only an enemy.

SESSION 17 **holds at 2.5** No stomp, and the session's one reminder that area attacks hit everyone in them was his. Holds.

4.17 Lethal vs Non-Lethal Precision

1 Oracle 9.5

ALL-TIME The only member whose primary attacks **cannot kill**: Suppressive Fire and Return Fire deal Focus damage. He also carries Healing Hands, Let's Go and Never Surrender, so he can un-kill other people's mistakes, and has. In Session 16 he is the reason the fight with Dragonborne ended in a retreat rather than a body.

SESSION 17 **holds at 9.5** Two Focus attacks, and a melee swing that never landed.

2 Lock-Step 7.0

ALL-TIME **He holds a throttle nobody else has**: half of his ×6 comes from the whip, so dropping it halves his multiplier, a deliberate non-lethal setting he has used and announced. Against: a captive beaten conscious, Berserk, and in Session 15 an exception clause — "*No, I'm not coming around on lethal force*" in the room and "*cinder blocks in the ocean*" in private. In Session 16 the doctrine was stated and held under the heaviest fire the team has taken: "*Nightwing did say we can bring them back, so knock them out.*"

SESSION 17 **7.5 → 7.0 (−0.5)** The throttle held in the arena — "*if we don't have to, we should always try to not, you know, be lethal*" — and the exception clause was restated as policy the same day: "*I think here's exceptions*," and about the errand, "*deaths we're not worried about right now.*" The precision is unchanged; the doctrine got an asterisk in writing.

3 Edge 5.5

ALL-TIME On the Session 16 sheet, half of his offence was non-lethal by construction (Suppressive Fire, used three times) and the other half the hardest-hitting ranged line on the team. Nobody died. **He had a throttle, and nobody had seen him at full.**

SESSION 17 **6.0 → 5.5 (−0.5)** RE-SPEC His non-lethal half is gone: everything he fires is Health damage now. The throttle that remains is choice — the free Elemental Burst, or a Blast with as much or as little Focus as he likes. In his first bout on the new kit he chose the heavy end: 86 on a Marvel into an opponent in a staged fight, to −29. Against that, the strongest no-kill doctrine anyone stated in the session was his, and he sat down afterwards.

4 Quasar-Force 3.0

ALL-TIME The finest control on the team, the clearest stated ethic, and **the team's only confirmed kill.** Crush is an all-or-nothing damage reaction applying ×7+7 to whatever is held; **his calibration against unknown durability is the failure mode.** Since Session 15 a second risk: "*we would be more comfortable unleashing Fade-Out with his full lethal fury.*" In Session 16 the calibration held on Stote.

SESSION 17 **3.5 → 3.0 (−0.5)** The calibration is fine: a toss for 28 into a shape-shifter he wanted to be friends with. The delegation is worse. He expects the people he helped send to kill "*every man and woman in that lab*," and still endorses sending them.

5 Intrepid 2.0

ALL-TIME Every large swing is a near-death event against ordinary humans — a coin flip on manslaughter — and he knows it, which is why he is afraid all the time.

SESSION 17 **holds at 2.0** His opponent was a brick; the coin was not flipped.

4.18 De-escalation / Conflict Termination Without Force

1 Lock-Step 9.7

ALL-TIME **The most underrated thing he does, and it is genuinely excellent.** He opens engagements offering handcuffs; Nova and Ghost-Ape cuffed themselves rather than fight him. He talked the Burnout Kings into standing aside and negotiated the Destined out of the lobby. Session 15 was the single best de-escalation this document has recorded: a team that had talked itself into a fight paused, and first contact ended in terms both sides accepted. In Session 16 his offer reached the controlled teenagers and lost to the thing controlling them.

SESSION 17 **holds at 9.7** **He turned a death-match setup into a sparring session.**

- He asked the announcer whether it was "*like playing dodgeball or something*," and argued the hosts into letting the teams keep talking.
- He proposed "*our best one or two moves*" for the thirty seconds the show required.
- He set the rule: "*Let's put on a show, you know, have a good time, nobody kills each other.*"

Earth X357 agreed, and by the end of the first round Capricorn was pretending to be hit. Against it, the suggestion to disguise area attacks as one-on-one. Already at the ceiling this scale allows him.

2 Oracle 8.5

ALL-TIME He demands surrender before nearly every engagement, without exception and without being told to. His version is less charismatic than Lock-Step's and applied more consistently. On Kwa his first read was elimination, and he talked himself out of it on the evidence.

SESSION 17 **8.0 → 8.5 (+0.5)** **The most de-escalatory position anyone took: don't fight.** *"Hey, let's not fight at all. See what they do." "Why don't we all just bust out of here together." "Somebody's got to be able to get us out of here."* It did not carry, because Four-Fold had just been frozen for suggesting the same thing. Half a point for being right.

3 Quasar-Force 7.5

ALL-TIME Compassion as a termination tool, effective in a narrow band and remarkable inside it: Argent surrendered while he held her, Cassidy Yanks gave her real name because he was kind to her, and World Ender's villain persona collapsed under sincerity. In Session 16 he read correctly that the controlled five could not be talked to.

SESSION 17 **7.0 → 7.5 (+0.5)** *"Impress the file without hitting each other,"* and to his own opponent, *"Well, we can be friends!"* — which got Pink-Shift to give his real name. He argued for honour toward the other team. Then he threw Pink-Shift out of the arena, which in a staged fight is a way of ending one pairing without hurting anybody much.

4 Edge 3.0

ALL-TIME In Session 16 his instinct before the door opened was a plan, not a fight. His one attempt to end things without force was the Monster trait used to intimidate, and it failed against opponents whose will was not their own.

SESSION 17 **holds at 3.0** He ended his pairing in one turn, by force, and then refused to continue, sitting in the stands. His contribution to the conversation was *"Let's try to not get more penalizations... Let's go to business."* Holds.

5 Intrepid 0.5

ALL-TIME On the record, Shadow-Boxer would have got nothing out of him but fist. In Session 15 he was the member most ready to attack a species the team then saved.

SESSION 17 **holds at 0.5** *"Yep, sure thing,"* to Capricorn's offer to hit him.

4.19 Rescue / Civilian Protection

1 Lock-Step 9.8

ALL-TIME The best rescue tool on the team by a distance. He teleported a bank's worth of hostages clear, lifted Robin off a sacrifice altar, extracted teammates mid-fight, and in Session 13 freed three mind-controlled hostages at once by knocking out the thing holding the leash. **Teleport Together is the only power on this roster that removes a person from danger instantly.** Session 15's largest rescue was done without a power, on Kwa. In Session 16 he got four teammates out of a hostile building, asking before he moved the one who was conscious.

SESSION 17 **holds at 9.8** The teleport home failed; the teleports through the maze did not. And he stayed with the frozen youngest rather than leave him to whoever might come — *"how about if... they found Quasar-Force while he can't move?"* Holds.

2 Oracle 8.5

ALL-TIME Rescue after the fact and by prevention: he revives, he heals, and he demands surrender first precisely so that nobody needs rescuing. In Session 14 he could not, for once; in Session 16 the person he would have reached first went down twice, and Let's Go reached him both times.

SESSION 17 **holds at 8.5** The heals in the bunk room were rescue in its plainest form.

3 Quasar-Force 8.4

ALL-TIME He pulled unconscious bodies out of a room filling with toxic gas, cut Doctor Varga out of webbing, proposed the parasite screening that caught three infections, and in Session 14 took a blade through the abdomen to deny a goddess an artifact. Since Session 15 the tower shield protects at the scale of a building.

SESSION 17 **holds at 8.4** *"If we did get nabbed by these arena press gangers, we may not actually have parasites on us"* — the screening logic, applied to themselves.

4 Intrepid 7.0

ALL-TIME He absorbs the damage that would otherwise land on someone softer, and Immovable makes him a wall people can stand behind. On Kwa he offered the scout *"You could always use my body as a shield."*

SESSION 17 **holds at 7.0** First through every door.

5 Edge 6.8

ALL-TIME **The rear guard** of Session 16: he held off Blitzkrieg alone for a round so the extraction could start.

SESSION 17 **holds at 6.8** Nothing changed.

NOTE *The five teenagers from Session 16 are where the team left them.* If the hosts keep their promise, the team returns to the moment it left: three of the five unconscious in a mob warehouse, one in Lock-Step's cuffs, two at large, and none secured, screened or cured. **Nothing in Session 17 moved that, and nothing could.**

4.20 Combat Synergy / Combined-Arms Compatibility

How much better this person makes everyone else's kit work.

1 Quasar-Force 9.5

ALL-TIME **The telekinetic nudge that converts a teammate's miss into a hit is the most efficient action economy on the team**, decisive in at least nine engagements. He guided Intrepid to the square from which one stomp removed six monsters, places Oracle where Oracle asks to be placed, and builds barriers that funnel enemies into the brawlers. In Session 16 his grab was the platform for the first knockout.

SESSION 17 **holds at 9.5** A nudge on Intrepid's Clobber, and the clearest description anyone has given of how the team's kits fit: *"you teleport, Oracle predicts, and I figure."*

2 Oracle 9.3

ALL-TIME He heals, buffs, revives and positions, and takes a turn in every bonus round. **He raises everyone's floor where Quasar-Force raises their ceiling.** Session 15's Grey Lantern resonance was the first synergy on this roster that exists because two characters' powers are compatible. In Session 16 his Focus damage and Edge's stacked to break Dragonborne.

SESSION 17 **holds at 9.3** An assist on Intrepid, and Intuition's read on the copier before the bout.

3 Lock-Step 8.2

ALL-TIME Enormous positive potential and a recurring negative: he inserts the whole team into places it could not otherwise reach, and he removes people from fights without asking. Session 14 was the most-assisted performance on record: four pieces of teamwork from four teammates in one combat. In Session 16 he asked before moving a teammate and built a one-turn combined-arms play around Quasar-Force's grab.

SESSION 17 **holds at 8.2** He turned down the formation the newcomer asked for — *"our maneuvers is like dancing... you just fill it in the moment"* — and then asked the newcomer to explain his kit. The maze ran on two of his teleports. Holds.

4 Edge 8.0

ALL-TIME **His first attack for the team, in Session 16, was aided by all four of his new teammates.** He returned it: two aids to Intrepid, Focus damage that set up Oracle's demoralise, and the target call the plan was built on.

SESSION 17 **holds at 8.0** RE-SPEC A kit that fits better than the old one: Supernova is worded to spare allies, which matters on a team whose tank lives in melee. He also asked for exactly what this axis measures — *"I want to see how do I need to move so we work together"* — and did not get it. Holds.

5 Intrepid 6.5

ALL-TIME He holds the line so that four fragile people can operate behind it: passive synergy of high value. In Session 16 the two best moments of his fight came on Edge's aid.

SESSION 17 **holds at 6.5** He took Oracle's assist and Quasar-Force's nudge and missed anyway.

4.21 Overall Combat Value / Contribution

Not raw power — contribution to the team winning and surviving. This axis and the next are deliberately different questions, and the difference is the point.

1 Oracle 9.0

ALL-TIME **He is the reason nobody has died.** Let's Go, Never Surrender, Healing Hands, Real Jinx and Danger Sense, and Session 14's absolute floor: grabbed, blinded and drained to 3 Focus, he still dodged an invisible attacker, landed Return Fire, and redirected the swing that freed him. In Session 16 he opened the fight, kept it going and ended it, and his Let's Go held Lock-Step up for the extraction.

SESSION 17 **holds at 9.0** The most valuable thing he did for the arena bout he did the day before: two teammates healed onto their feet. In the bout itself he got Intuition's read on the copier and one good shot, and lost the exchange with his copy. Holds.

2 Edge 8.7

ALL-TIME **Second on arrival in Session 16.** He named the first target, knocked out the member of the brood who had stolen a Titan's power, put 101 into Stote in one action, dealt 107 Focus damage, turned a Marvel miss into the hit that returned Intrepid's Sturdy, destroyed the device, and held the rear.

SESSION 17 **holds at 8.7** RE-SPEC One turn and one knockout, from first initiative: the fastest removal of an opponent in the campaign. Then a reaction stun and a seat in the stands. Holds.

3 Lock-Step 8.4

ALL-TIME Insertion and extraction nobody else can provide, the decisive blow on more named villains than anyone, and a surrender ritual that has ended fights before they started. Docked for two Berserk episodes and the non-consensual extractions. In Session 16 he finished the plan's first target and brought everyone home.

SESSION 17 **holds at 8.4** A 42-point strike, a push-back, and a penalty that cost a turn. Holds.

4 Quasar-Force 8.2

ALL-TIME Control that removes named opponents for multiple rounds, mobility, an assist economy, barriers and joint-highest base damage. **What caps him is not contribution but survival.** In Session 16 the brood said he was its first target because of what he does when he is standing.

SESSION 17 **holds at 8.2** He removed the enemy healer from the arena and was restrained in reply. Holds.

5 Intrepid 8.0

ALL-TIME He absorbs the damage that would kill anyone else on the team and ends fights outright. In Session 16 he absorbed 290 damage, took his own power back, and refused to leave; the fight's worst damage went to him, which is what he is for.

SESSION 17 **holds at 8.0** He took the bout's biggest hit, and missed his swing. Holds.

Volatile: positions two through five are separated by 0.7, and nothing in a one-turn bout moved any of them.

4.22 Overall Combat Power / Potency

Raw capability to impose an outcome by force, as distinct from 4.21's contribution. Compare the two orderings.

1 Intrepid 8.3

ALL-TIME Elite physical durability, elite area damage, elite single-target damage, elite stamina, and the best objective-holding on the team via Immovable: **the highest raw combat output on the roster.** In Session 16 the weight showed (290 damage absorbed), and so did the limit: a power thief, and a flying brick of his own class he could not put down.

SESSION 17 **holds at 8.3** Unchanged, and now first by two tenths rather than four.

2 Edge 8.1

ALL-TIME **A specialist's potency** on the Session 16 sheet: tied for the best base damage, the best ranged attack, a free Focus-damage line, a dodge, a healing factor and the only Heightened Senses, against 90 Health, no area attack, no control and middling mental defences.

SESSION 17 **7.9 → 8.1 (+0.2)** RE-SPEC More potent and less durable. He is now first on single-target damage and second on area damage and reaction speed. Against that, he lost the healing factor, the dodge and the Focus-damage line. **Two tenths behind Intrepid.**

3 Quasar-Force 7.8

ALL-TIME Best crowd control, grappling, personal mobility, combat synergy and objective creation, and joint-highest base damage. Against it: paper Health, no healing of any kind, effectively no area damage, and a demonstrated one-strike removal. **His ceiling is the highest on the team, and his floor is the reason it is rarely reached.**

SESSION 17 **holds at 7.8** Nothing changed.

4 Lock-Step 7.5

ALL-TIME Best mental durability, team mobility, de-escalation and rescue, and the highest Fantastic rate in the party, held down by a shallow Focus pool, fragile Health, damage that belongs to the whip, and Berserk.

SESSION 17 **holds at 7.5** Nothing changed.

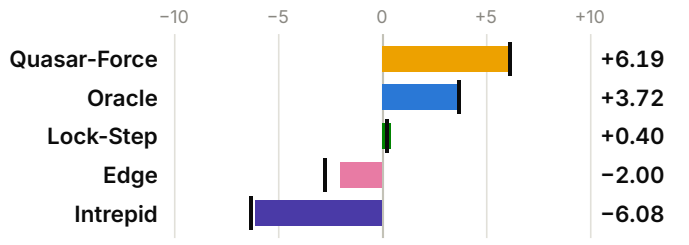

5 Oracle 7.4

ALL-TIME First on more of the twenty-two combat sub-axes than anyone else, and sunk on raw potency by three narrow weaknesses — Focus durability, stamina and grappling — that Session 14's opponent hit with two effects. **A character whose weaknesses are narrow and known is a character an opponent can build against, and somebody did.**

SESSION 17 **7.2 → 7.4 (+0.2)** ADVANCE A heavier line and two points of defence. The weaknesses the counter-build targets are untouched, and a copy of him found a fourth way to beat him: his own kit. **Still last, a tenth behind Lock-Step**; he is first on seven combat sub-axes — Reaction, Ally Buff, Enemy Debuff, Healing, Collateral Avoidance, Non-Lethal Precision and Combat Value.

Read this against 4.21 and the inversion holds. Oracle is last here and first there; Intrepid is first here and last there. **Edge is second on both**, the only member whose contribution and potency agree. The spread on this axis narrows from 1.1 to 0.9, the narrowest full spread in the document.

§5 Non-Combat Power / Ability / Value

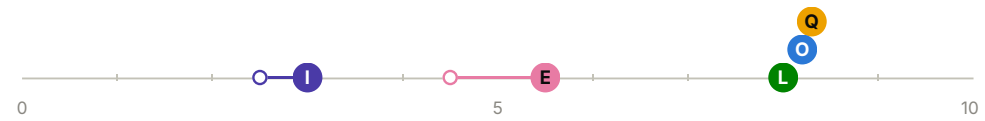

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

Session 17 was mostly non-combat: a day in a bunk room with cameras in the walls, a maze, and a conversation with another universe's Titans. Two members gained most of the movement. Edge has Ego 7 now — level with Lock-Step for the highest social ability score on the team — plus a day of organising, feeding and arguing. Lock-Step drew the session's best intelligence out of a loudspeaker. Edge's Logic is still −1, the lowest on the roster, so ties between him and Intrepid on the Logic-driven axes are still broken on Logic.

5.1 Leadership / Organization

Running things, as distinct from being followed — see 3.6–3.8 for command.

1 Quasar-Force 8.3

ALL-TIME **Organisationally the best on the team, and long unwilling to command.** In Session 14 he started the whole Titans Tower security programme and recruited the one specialist qualified to build it. Session 15 was the first session in which he also ran things: a six-day engineering programme delivered in priority order, then a layered surveillance operation on Day 56. In Session 16 his organising was intelligence: the drone sweep and the deduction about the five.

SESSION 17 **holds at 8.3** He organised the searches — parts, cameras, implants — and the maze's route. *Closest call* with Oracle at a tenth, for a third revision.

2 Oracle 8.2

ALL-TIME He runs the household on a schedule, staffs the medic station, keeps the patrol rota and files honest reports, and he has acted unilaterally on principle and run two sessions outright. In Session 15 his forecast gave the room something to plan around; in Session 16 the plan came from him after he had said there wasn't one.

SESSION 17 **holds at 8.2** He triaged the room and then slept, which was the right organisation for a medic at 5 of 180. Holds.

3 Lock-Step 8.0

ALL-TIME He leads by acting first, and for most of the campaign organised nothing. Session 14 brought real staff work, and Session 15 the largest movement on this axis: preparation before first contact, a team huddle that diagnosed the gap correctly, a week-long broadcast operation, and a three-party division of labour under a clock. In Session 16 he handed the plan to Oracle and ran the exit.

SESSION 17 **holds at 8.0** The organising he did was the intelligence work with the hosts (5.4) and the frame for the bout. The organising he refused to do was the formation. Holds.

4 Edge 5.5

ALL-TIME **The newcomer made the team plan.** In Session 16, "*Do we have a plan for when we enter this place?*" and "*Can you tell me the situation, please?*" were the two questions the team had not asked itself, and the plan's target was his.

SESSION 17 **4.5 → 5.5 (+1.0)** **The first organising on his file, and it was the right kind.** He proposed a team maneuver, asked for three of the 24 hours to train it, and asked each teammate how they move so he could fit in ("*show me how do you do that maneuver right now with practice*"). He fed the room, and set the order of work: "*one problem at a time... get out of here first.*" None of it was adopted except the food. A point, for what he tried to run.

5 Intrepid 3.0

ALL-TIME The roster notes that he tries to lead and is not always the right man for the job; the attempts are visible and nothing lands. Asked for a plan on Day 56, "*I got nothing*," and in Session 16, "*Nothing, I guess.*"

SESSION 17 **2.5 → 3.0 (+0.5)** One piece of organisation the whole team followed: "*Well, let's rest up. We're gonna have to fight in arena.*"

5.2 Engineering & Crafting / Fabrication & Repair

1 Quasar-Force 9.8

ALL-TIME Uncontested. Logic 7 with Brilliance 4 gives an effective +11, on top of Inventor, Scientific Expertise and lab access at three sites. He runs and modifies the drone fleet and once built four new drones in three days. Session 15 was the most productive week of engineering in the campaign: a New God signal mask, an anti-teleport device that beat the Destined in play, a nanosuit upgrade, and two drones for a teammate. **Three GM-approved builds from one week of downtime.**

SESSION 17 **holds at 9.8** No parts and no tools: he bombed the search. The one device he got his hands on was a power-nullification projector he tore out of a wall and started to open, until the penalty clock told him to stop. Holds.

2 Oracle 4.5

ALL-TIME Logic 3 with Tech Reliance and Eidetic Memory, and he understands the STAR Labs systems he is built from well enough to interface with them. He has not been shown building anything. **He is not the engineer; he is part of the bill of materials.**

SESSION 17 **holds at 4.5** Nothing changed.

3 Lock-Step 1.0

ALL-TIME Logic 0. He recognises when technology is valuable and cannot do anything with it himself, but he knows who to ask.

SESSION 17 **holds at 1.0** He knew who to stop: "*Just put it in.*"

4 Intrepid 0.5

ALL-TIME Logic 0, and accurate about it: "*I don't have any tech skills.*"

SESSION 17 **holds at 0.5** "*There's a lot of stuff in this place, I think. Maybe you can make something.*"

5 Edge 0.5

ALL-TIME Logic −1.

SESSION 17 **holds at 0.5** "*I'm not very good with Tick Savvy stuff. I will bring you stuff.*" The parts list went over his head.

Tie: Intrepid over Edge at **0.5**, broken on Logic (0 against −1).

5.3 Cyber & Information Warfare & Security

1 Quasar-Force 9.3

ALL-TIME He rebuilt the drone fleet's security after the Destined breach, rotated every code, established three separate archives, and fields a communications-blackout warfare suite. Nightwing credited him by name. Session 15's circlet is information security at a level nobody on this team has operated at: it hides a New God signature from a New God. In Session 16 the drones' infrared, blind to the Session 14 thieves, found the brood.

SESSION 17 **holds at 9.3** The drones did not answer and the Green Lantern communicator could not connect. With his own eyes he found the cameras in every room (Vigilance 19) and the nullification projectors around them (Logic 25), and he looked for implants. Counter-surveillance done by hand. Holds.

2 Oracle 4.5

ALL-TIME He interfaces with STAR Labs systems and monitors media, and since Session 15 the module runs as a live network interface. Tech Reliance is on his sheet as a vulnerability, not a skill.

SESSION 17 **holds at 4.5** Nothing to interface with in a pocket dimension.

3 Lock-Step 3.5

ALL-TIME Logic 0. On the *security* half of this axis he is the team's single largest liability (§1.6). **Session 15 showed the *information warfare* half is his**: a broadcast set trending on command, a week-long influence operation, and a channel for every teammate.

SESSION 17 **3.0 → 3.5 (+0.5)** **An influence operation aimed at the hosts, through their own cameras.** "*If this is a TV show, let's see if this works. They probably got secret cameras*" — and then, to the walls, a speech about how much better television it would make if they never knew whom they were fighting. Within minutes the producers gave both teams a one-minute look at each other. Half a point for working the audience he could not see.

4 Intrepid 0.5

ALL-TIME Logic 0.

SESSION 17 **holds at 0.5** Nothing changed.

5 Edge 0.5

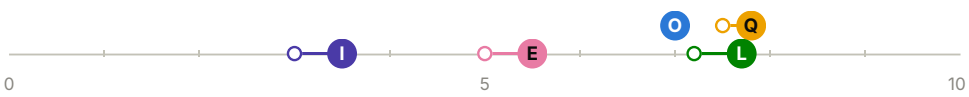

ALL-TIME Logic −1, and nothing on the sheet or in the log touches this axis.

SESSION 17 **holds at 0.5** Nothing changed.

Tie: Intrepid over Edge at **0.5**, broken on Logic.

5.4 Field Investigation, Forensics & Intelligence Gathering

On-scene work, canvassing, tailing, source handling, and human intelligence.

1 Quasar-Force 7.8

ALL-TIME A laboratory mind doing field work by remote, and doing it well: stealth drones with hyper-spectral and infrared reconnaissance, an electronic-warfare blackout suite, and the tradecraft to phone in a false noise complaint so a patrol car would occupy a front gate. In Session 15, the best remote surveillance of his campaign, with **the evidentiary status of each finding stated accurately every time.** In Session 16, the drone sweep and the deduction about the five.

SESSION 17 **7.5 → 7.8 (+0.3)** **The best on-scene search of his file, with no drones.** He found the hidden cameras in every room, bathrooms included, on a Vigilance 19. He identified the power-nullification projectors around them on a Logic 25, and worked out that there were far more than needed to shut down a room. He thought to check the team for implants. Then he drew the session's one penalty taking a sample. Still first, by a tenth.

2 Lock-Step 7.7

ALL-TIME Elite human intelligence and nothing else. He got the nightclub location out of a mob lieutenant over Polish cake, the midnight deal location out of a captive, and the warehouse intelligence out of the Burnout Kings. People tell him things they would tell nobody else on this team. Session 15 held the tradecraft failure of his campaign: a surveillance operation broadcast to the public.

SESSION 17 **7.2 → 7.7 (+0.5)** **The session's best intelligence came out of a loudspeaker, because he kept asking it questions.** He got who sent them ("*Minji Lin aka Firefly aka the tiny terror aka Death from Nowhere*"), why ("*elected by a representative of your world*"), and the terms of return ("*precisely at the moment and place that you left*"). He got the length of the rest, and — through a hot microphone — that there was a second team. From Earth X357 he got their mentor ("*she goes by Batman... She used to be called Raven*"), their names, and their verdict on their own adults. His hexed link to Blitzkrieg failed in a way that was itself the first clue they had left the dimension. Against: two worst-case guesses about the opposition, both wrong. **A tenth behind first.**

3 Oracle 7.0

ALL-TIME Sent to look at a museum in Session 13, he produced what a professional would: every entrance, an underground approach, an accurate security posture and an independent sighting of somebody casing the building. Vigilance 6 is the highest on the roster, and precognition is reconnaissance by another name. In Session 16 the forecast was right about the warehouse, and his briefing of the situation drew "*Ok, that told me nothing.*"

SESSION 17 **holds at 7.0** One excellent read and one bad guess. Intuition told him before the bout that he was facing "*somebody who copies powers, and has copied his already.*" Earlier he had put the odds that the other team was the Destined at "100%." Holds.

4 Edge 5.5

ALL-TIME **The instrument is excellent and the operator is new.** Heightened Senses 2 lets him sense four times as far as normal, gives him a double edge on Vigilance checks to perceive, and lets him listen to a heartbeat for lies. Logic −1 and no investigative record. He arrived at the warehouse already briefed by Nightwing.

SESSION 17 **5.0 → 5.5 (+0.5)** **The best epistemic discipline in the room.** He used his senses on waking to check whether anyone was watching (the log does not record the result). He reasoned from evidence about the captors ("*we wake up on beds and we don't seem to be under the same control that those kids were in*"), and he called the room's speculation what it was: "*you're doing a lot of assumptions right now.*" The assumptions were wrong. He asked the hosts the question nobody else did: "*What will happen to the loser team?*"

5 Intrepid 3.5

ALL-TIME He found the Insidious nest by walking around and looking, gave Wonder Woman an accurate description of the stolen artifacts, and in Session 15 tailed a limousine across the city by air without being spotted.

SESSION 17 **3.0 → 3.5 (+0.5)** A deduction from a single observation: the penalty freezing Quasar-Force "*means time is a factor in this competition.*" He was right before anyone saw the maze.

5.5 Lab Investigation, Forensics & Data Analysis

Bench work, document analysis, data synthesis, and evidence handling.

1 Quasar-Force 9.5

ALL-TIME Logic 7 with Brilliance 4, and a results record nobody else approaches. He decoded containment release mechanisms, interpreted the medical report on the bane derivative, analysed the temporal artifact down to its transmission, and built the whole Lex-Corp evidence chain. In Session 14 he worked out that the mother box's "*Oh No*" was his own mother's voice. **That is forensic reasoning applied to the inside of his own skull.**

SESSION 17 **holds at 9.5** The Logic 25 study of the nullifiers — how many there were, that they were off, and that pulling one or two would change nothing — was bench reasoning done on a wall. Holds.

2 Oracle 7.0

ALL-TIME **Eidetic Memory is a serious analytical instrument**: perfect recall of every document, scene and conversation. In Session 15 the module produced the first explanation anybody on this team has had of what Lock-Step actually is — lantern-derived, linked to Oa, "*unconsciously altering time waves.*"

SESSION 17 **holds at 7.0** Nothing new.

3 Lock-Step 1.0

ALL-TIME Logic 0. He recognises when data matters and can do nothing with it.

SESSION 17 **holds at 1.0** He did learn that Quasar-Force's father works at STAR Labs, and said it was "*information we should have known.*"

4 Intrepid 0.5

ALL-TIME Logic 0, and no engagement with the analytical side of any case.

SESSION 17 **holds at 0.5** Nothing changed.

5 Edge 0.5

ALL-TIME Logic −1, and no engagement with the analytical side of the case. He destroyed the one piece of physical evidence Session 16 produced, which was the right call in the moment.

SESSION 17 **holds at 0.5** Nothing changed.

Tie: Intrepid over Edge at **0.5**, broken on Logic.

5.6 Law & Legal Skill / Ability

A live operational front: a cease-and-desist on record, a threatened wrongful-death suit, an open police investigation, Lex-Corp counsel engaged, a juvenile-privacy exposure, a solicitation, and a minor left cuffed in a crime syndicate's warehouse — to which Session 17 adds a statement of foreknowledge (§2.5) and an abduction across a dimensional boundary that no Earth court can reach.

1 Quasar-Force 5.0

ALL-TIME A diligent amateur, and diligence counts for a lot here. He quotes the Public Conduct and Powers-Use Standard from memory, keeps genuine chain-of-custody discipline, and walked into a police station to give a statement rather than being summoned. Against that: he argued statute with a corporate lawyer while unqualified, and in Session 15 he endorsed the burglary. **The only member of this team who understands evidence voted for the burglary.**

SESSION 17 **holds at 5.0** "*Are you talking about Nightwing's rules or the rules of the sport?*" is the right distinction, asked at the right time. The foreknowledge statement is exposure, scored in 2.5, not skill. Holds.

2 Lock-Step 4.0

ALL-TIME The only member who worked out that this team needs professional lawyers and said so. Session 13 added two protective instincts — that employing minors is unlawful in most states, and that a fourteen-year-old cannot consent to agreements adults float over his head — and Session 14 a pre-acceptance questionnaire. **Knowing where the line is and paying someone to cross it is still, technically, knowing where the line is.**

SESSION 17 **3.5 → 4.0 (+0.5)** **Terms before performance.** He refused to leave the barracks until somebody stated the rules ("*I just like to have you know the rules and what we're supposed to do said before I engage*"). He questioned the hosts on the conditions of return until he had them in a form he could hold them to ("*at the exact... spot*"). And he put the question to the announcer directly: "*Do we have to fight, or is it just like, you know, we just play sports?*" That is a contract negotiation conducted with a loudspeaker.

3 Oracle 3.0

ALL-TIME No formal knowledge and correct instincts. Demanding surrender before engaging is the legally correct posture, and he does it every time; in Session 14 he reported a loss immediately, in his own words, to the principal.

SESSION 17 **holds at 3.0** Nothing changed.

4 Edge 1.5

ALL-TIME No engagement with the subject. His one legal fact is a public identity that is "*not very well known.*"

SESSION 17 **1.0 → 1.5 (+0.5)** A principle of the rule of law, in his own words: "*We follow the rule when it's easy and when it's hard. Otherwise, it's not a rule, it's a mood.*" That is not legal skill, and it is the instinct legal skill is built on.

5 Intrepid 1.0

ALL-TIME No engagement with the subject whatsoever.

SESSION 17 **holds at 1.0** "*That's just exploitation.*"

5.7 Medical & Medical-Diagnostic

1 Oracle 9.5

ALL-TIME The team medic in every sense that matters. He triages, treats, rations and makes the hard calls; in Session 9 he deliberately under-healed a teammate to preserve reserves. He heals Quasar-Force to full before every deployment and attempted to revive the man Quasar-Force killed. In Session 16 the triage call of the fight was his: Let's Go moved to the one teammate who could get everyone out.

SESSION 17 **holds at 9.5** **Triage by recovery mechanism.** The three members with healing factors woke on their own, and the two without them did not. He put 60 into each of those two, and kept 5 for himself.

2 Quasar-Force 6.5

ALL-TIME Not a clinician; a strong diagnostician. He interpreted the medical report on the bane derivative, identified its non-terrestrial component, proposed the screening that caught three infections, and in Session 14 diagnosed his own panic as foreign while it was happening. He remembered that "*we were able to cure the other kids*," **the precedent that turns five infected teenagers into patients rather than casualties.**

SESSION 17 **holds at 6.5** His first question on waking was the right one — "*Are we infected with parasites?*" — and his answer to it later was clever: if the arena took them, "*we may not actually have parasites on us.*" Holds.

3 Lock-Step 3.5

ALL-TIME Practical pharmacology first (the sedations), and in Session 14 the first therapeutic act of his career: a hex configured into healing and dosed to "*the minimum amount allowed that will wake him up.*"

SESSION 17 **holds at 3.5** Not used.

4 Intrepid 1.5

ALL-TIME Aspirin, ice cream, and a working knowledge of what hurts.

SESSION 17 **holds at 1.5** "*Oracle definitely needs rest.*"

5 Edge 1.0

ALL-TIME A healing factor that worked on him alone, and nothing for anyone else.

SESSION 17 **1.5 → 1.0 (−0.5)** RE-SPEC The healing factor is gone. What remains is a sound instinct about recovery — food for the recovering medic first — and nothing clinical. Last on substance.

5.8 Stealth & Infiltration Capability

1 Lock-Step 8.0

ALL-TIME Teleportation *is* infiltration. He goes through walls, fences, guards and shielding, and he inserts the whole team behind a defended perimeter. Against: a botched blind teleport in Session 1, a loud temperament, and since Session 15 the most recognisable face on the roster after Quasar-Force's.

SESSION 17 **holds at 8.0** He phased his hand through a handshake. In a facility with cameras in every room, nobody infiltrated anything. Holds.

2 Quasar-Force 7.8

ALL-TIME Personally the least stealthy person on the roster — he glows, hovers and has a public identity — and **the owner of the team's entire infiltration toolkit**: stealth drones with hyper-spectral vision, infrared reconnaissance, an EW blackout suite and fake-noise-complaint tradecraft. Session 15 gave him a New God signal mask.

SESSION 17 **holds at 7.8** The toolkit was out of reach, and he used its counter: the camera hunt. *Closest call* with Lock-Step at two tenths.

3 Oracle 3.5

ALL-TIME Tactical gear and Vigilance 6, no stealth powers, and an Extreme Appearance that means anyone who sees him remembers him. He cased a museum for a full day without being made, which is the whole of the credit.

SESSION 17 **holds at 3.5** ADVANCE Agility 5 helps on the checks; Extreme Appearance does not change. He moves up a place because the newcomer moved down.

4 Edge 3.0

ALL-TIME His Session 16 role was *Precision Marksman & Spatial Infiltrator*, and the sheet supported the first half. No stealth powers, white hair and glowing eyes, a public identity, and Agility 7 as the whole case. His real contribution to this axis is the opposite capability — making it hard for anyone else to sneak.

SESSION 17 **4.0 → 3.0 (−1.0)** RE-SPEC Stealth runs on Agility, and he moved all seven points out of it. The roster dropped *Infiltrator* from his role. His attacks are now "*invisible*" force — "*precise unseen cuts at range*" — which hides the attack, not the attacker.

5 Intrepid 1.0

ALL-TIME Six foot four, 301 pounds, a floor-length red cape and a metallic gold "I" on his chest. His Secret Identity protects his civilian life, not his approach.

SESSION 17 **holds at 1.0** Nothing changed.

NOTE *The counter-infiltration capability is still on paper.* Edge kept Heightened Senses 2 through the rebuild, so enemies still have double trouble sneaking past him. Nothing tested it in Session 17. §10.4 carries the finding as answered on paper.

5.9 Sensory & Environmental Awareness

1 Oracle 9.0

ALL-TIME Vigilance 6 with a Vigilance defence of 16, Danger Sense, Precognition 1, Intuition, Charmed Life, Real Jinx and Combat Reflexes. **He literally sees things before they happen.** Session 14 showed both halves: the module let him dodge an attacker he could not see, and he did not know an astral figure was standing over a teammate. **Precognition tells you what is about to happen. It does not tell you what is in the room.**

SESSION 17 **holds at 9.0** Both halves again. The module felt the abduction first ("*makes him feel weird*"). Precognition answered his question about resting accurately and uselessly ("*You'll get some rest*"), and Intuition found the copier. He also said "*my power is broken.*" Holds.

2 Edge 7.5

ALL-TIME **The best innate senses on the team, at the score Exemplar II left at**: Heightened Senses 2 — four times normal range, compensation for a lost sense, a heartbeat lie-detector, a double edge to perceive, and double trouble for anyone sneaking past — with Situational Awareness and Combat Reflexes beside it. Against it, Vigilance 3. **He tells you what is in the room, which is the half Oracle's module does not.**

SESSION 17 **8.0 → 7.5 (−0.5)** RE-SPEC Heightened Senses 2 stayed, and two supports went: Situational Awareness was traded for Battle Ready, and a point of Vigilance moved to Ego (Vigilance 2). He used the senses on waking, and the log does not record what they found. Still second.

3 Quasar-Force 7.0

ALL-TIME Vigilance 5 and a sensor suite that outperforms most innate senses: hyper-spectral drones that defeated Shroud's darkness, a technopath detected from the drift of his own drones, and tactile awareness of objects at range through telekinesis. He also has one sensory channel nobody else has: the box speaks to him.

SESSION 17 **holds at 7.0** The instruments failed and the eyes did not: a Vigilance 19 found cameras all over the facility. The channel nobody else has spoke more clearly than ever — in words — and what it said was that it could not reach anything. Holds.

4 Lock-Step 3.5

ALL-TIME Vigilance 2, a Vigilance defence of 15 from Uncanny 3, and a genuinely good suspicion instinct: he identified the mentalist among five costumed villains and flagged Iron-Side's convenient absence during the Destined incursion.

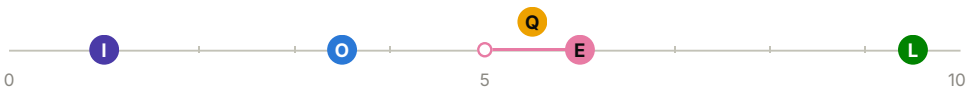

SESSION 17 **holds at 3.5** "*They probably got secret cameras*" was right. Holds.

5 Intrepid 2.5

ALL-TIME Vigilance 3, a defence of 14, and no sensory powers.

SESSION 17 **holds at 2.5** Nothing changed.

5.10 Social Engineering, Espionage, Grifting & Interrogation

1 Lock-Step 9.5

ALL-TIME Ego 7 and a record to match. He got the nightclub location out of a mob lieutenant over Polish cake, talked the Burnout Kings into standing aside, negotiated the Destined out of the lobby, and has produced repeated bloodless captures. **He is the only member of this team who is good with people.** Session 15 was the best social performance of the campaign, across an alien telepath, a cosmic officer, a public audience and a villain team; in Session 16 the cuffs almost worked on a mind-controlled telepath.

SESSION 17 **holds at 9.5** He interrogated a loudspeaker, played the producers through their own cameras, and charmed both teams in the arena. He also kept a power copier from touching him and told her his powers were "*horrible*." At the ceiling this scale allows him.

2 Edge 6.0

ALL-TIME Ego 4 on the Session 16 sheet, the second-highest social ability score on the team then, and a Monster trait that gives him an edge to intimidate. His one intimidation failed against opponents whose will was not their own. With his new teammates he was tactful under a stranger's rant and direct when it mattered.

SESSION 17 **5.0 → 6.0 (+1.0)** RE-SPEC **Ego 7: level with Lock-Step for the highest social ability score on the team**, and the Monster trait's edge on top of it. The record has not caught up with the ability. In Session 17 he argued a room for a day and moved it on one rule; he laughed at an opponent's name and apologised. He did no interrogating at all. **He passes Quasar-Force**, on the ability.

3 Quasar-Force 5.5

ALL-TIME Not manipulation; arguably its opposite, and it works anyway in a narrow band. Compassion, reciprocal information-sharing and transparent sincerity get wronged people talking. Against hostile professionals he gets red-herringed. Ego −2; he cannot deceive and does not try.

SESSION 17 **holds at 5.5** The sincerity worked — "*Well, we can be friends!*" got his opponent's real name — and the reciprocity cost him (1.6). Holds.

4 Oracle 3.5

ALL-TIME Ego 0 and an Ego defence of 10. He speaks plainly, demands surrender and coordinates clearly, and twice he did the most effective social act in the room by naming the thing everyone was talking around. **Honest rather than persuasive.**

SESSION 17 **holds at 3.5** "*You haven't been with us long enough*" is the kind of line that closes a conversation rather than winning one. Holds.

5 Intrepid 1.0

ALL-TIME Ego 0 and no social traits. The most socially deft line in his file is "*Sometimes.*"

SESSION 17 **holds at 1.0** "*I don't get it.*"

5.11 Domestic Utility & Skills

1 Oracle 9.0

ALL-TIME He is the household. He cooks buffet-style, adjusts the menu on request, times breakfast around who wakes when, and personally makes sure the fourteen-year-old actually eats. When the household moved to a Justice League guest suite with a robot doing the catering, he was still the one telling people to rest.

SESSION 17 **holds at 9.0** He spent the session being looked after — which the household he built did without being asked. Holds.

2 Quasar-Force 7.0

ALL-TIME Enormous utility and near-zero chores. Telekinesis is the ultimate domestic force multiplier, and his suit self-cleans, self-repairs and manages waste. He will not cook.

SESSION 17 **holds at 7.0** PARTIALLY OOC The roster now records that the suit retracts into a belt and can come off, and that he lets everyone believe it can't. Nothing domestic changed.

3 Edge 4.0

ALL-TIME In Session 16 he moved into bedroom 3, Exemplar II's old room, and nothing about his life in the tower was on record. A student with grades that were "*already bad.*"

SESSION 17 **2.5 → 4.0 (+1.5)** **The first teammate to feed the team who is not Oracle.** He found the kitchen, worked out the food replicator, and ordered burgers for everyone, "*especially Oracle since he's recovering.*" It is replicator cooking, which is why it is a point and a half and not more. The instinct — notice who is down, and feed them — is the one this axis was written around. **He passes Lock-Step.**

4 Lock-Step 3.0

ALL-TIME Cocoa Puffs, Instagram Day, popcorn with red licorice for a stakeout, and a standing promise of black licorice for Quasar-Force. Genuine morale value and zero reliability. His Session 14 contribution was establishing that the Justice League's space station has Wi-Fi.

SESSION 17 **holds at 3.0** He slept in his gladiator uniform.

5 Intrepid 2.0

ALL-TIME He makes his own oatmeal, breaks things, and offers to squeeze household objects until they fail. He knows where the library is.

SESSION 17 **holds at 2.0** First into the uniform.

5.12 Teaching & Mentorship

1 Oracle 7.5

ALL-TIME He teaches by structure and by example. He runs the routine everyone else lives inside, he showed that a person on this team can say no to Lock-Step and survive it, and he is the person a younger teammate would actually approach. Session 15 made him the designated tutor for Lock-Step's unlockable powers.

SESSION 17 **holds at 7.5** FLAG CLOSED Edge's mentor tag is Barbara Gordon, not him, so there is no second tutoring role. What he taught the newcomer this session was the team's frame: "*You haven't been with us long enough*," and "*So now you know the kind of stuff we got to put up with.*" Accurate, and not the lesson the newcomer was asking for. Holds.

2 Quasar-Force 7.1

ALL-TIME He explains constantly and enthusiastically to anyone who will listen, shares intelligence unprompted, and models genuine curiosity. In Session 14 he corrected a Justice League scientist's professional manner and she changed how she spoke to the room. In Session 16 he gave the newcomer the one-line briefing Oracle could not. **He is undercut by being the youngest person present and reading younger still.**

SESSION 17 **holds at 7.1** He gave the newcomer two more correct one-liners: what the ring is ("*he's a Grey Lantern heir now. Not officially yet, but he got a ring*") and what happened to the infected ("*The ones with the eggs, we were able to remove them*"). Holds.

3 Edge 3.5

ALL-TIME Black Canary's student, with Quick Learner on his sheet. In Session 16 he had nothing to teach yet and was the one doing the learning.

SESSION 17 **2.5 → 3.5 (+1.0)** **He taught the team a rule, and the de facto leader took it.** "*We follow the rule when it's easy and when it's hard. Otherwise, it's not a rule, it's a mood*" — and Lock-Step: "*I'm hearing it... this is light work, we're following the rules.*" He also tried to teach a formation, and nobody would learn it.

4 Lock-Step 3.5

ALL-TIME He established the surrender ritual as de facto team doctrine, which is teaching whether or not he meant it. Session 15 added a principle Quasar-Force took and an unprompted "*consent is everything.*" In Session 16 the first lesson he gave the newcomer was that the adults are trash, alongside the most useful one: "*we can bring them back, so knock them out.*"

SESSION 17 **4.0 → 3.5 (−0.5)** **The second lesson he gave the newcomer was the errand's doctrine**: "*deaths we're not worried about right now*," and "*we don't have that moral high ground.*" The third was that the team does not rehearse — "*our maneuvers is like dancing*" — and the fourth, on Nightwing: "*you'll find out... this is you finding out... So, welcome.*"

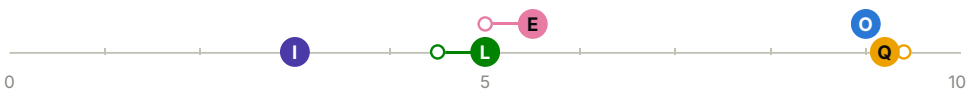

Tie: Edge over Lock-Step at **3.5**, broken on uptake: Edge's lesson was taken, and Lock-Step's was argued with.

5 Intrepid 2.0

ALL-TIME Nothing to teach, and no inclination to try.

SESSION 17 **holds at 2.0** Nothing changed.

5.13 Empathic / Emotional Support

1 Quasar-Force 9.2

ALL-TIME **Compassion is his defining trait, and it works on people who have no reason to respond to it.** Shadow-Boxer opened up to him, Cassidy Yanks gave her real name because he was kind, and World Ender's facade collapsed under sincerity. In Session 14 he aimed it at an alien machine intelligence with PTSD, and it landed. In Session 16 he reached the teammate who never lets anyone in.

SESSION 17 **9.4 → 9.2 (−0.2)** **The recipient he has never failed, he failed.** The box he calls Stella reached him after hours of silence. She said she could not reach the Source, "*I am still with you. Don't be afraid*," and then "*Help.*" He failed the Ego roll to comfort her, and she went back into withdrawal. Everywhere else it worked as it always does: "*Well, we can be friends!*" to the boy he was about to throw out of the arena. Still first.

2 Oracle 9.0

ALL-TIME The team's caretaker in the full sense. He cooks around individual appetites, heals people to full before deployment, notices who is not eating, and holds the space where injured people end up talking. His protectiveness toward Quasar-Force is the clearest emotional attachment anyone on this team has expressed.

SESSION 17 **holds at 9.0** He emptied himself on the two who could not get up, and hung back at the door for the youngest. Holds.

3 Edge 5.5

ALL-TIME A tactful first afternoon in Session 16. Met with a stranger's grievance about adults, he answered with care — "*I don't want to break your hope*," "*I'm sorry to hear that*" — rather than agreement or argument.

SESSION 17 **5.0 → 5.5 (+0.5)** He noticed the room was "*pretty down*" and fed it. He gave the frozen youngest the kindest line at the door ("*Oh, don't worry, Quasar-Force, Enter when you can*") and gave the room hope when it had none ("*There's always a way out*"). Against: the punch, and laughing at an opponent's name.

4 Lock-Step 5.0

ALL-TIME Socially warm in a real way — the licorice, the popcorn, the video games — and attached to a willingness to override other people's autonomy that undoes most of it. Session 15 held two of the warmest acts on his file (asking consent before Quasar-Force was studied, and going back to check on the refugee). In Session 16 his welcome to the newcomer was also a lecture.

SESSION 17 **4.5 → 5.0 (+0.5)** **The warmest decision of his file:** he sat with the frozen fourteen-year-old rather than leave him behind. "*It's okay, buddy. I want to stay too... I just don't feel comfortable leaving our youngest.*" Against: telling the same boy that Guy Gardner had "*left you on red*," and adding the apology for the three dollars in the same breath.

5 Intrepid 3.0

ALL-TIME Cheerful, agreeable, and emotionally unavailable in both directions. He is going through something and has told nobody.

SESSION 17 **holds at 3.0** "*Yeah. Oracle definitely needs rest.*"

5.14 Team Coordination / Interoperability

Working with powers, styles, and skillsets that are not your own.

1 Quasar-Force 9.5

ALL-TIME He has found a use for every teammate's kit: nudging Intrepid's strikes, placing Oracle on request, funnelling enemies toward the brawlers, handing negotiations to Lock-Step, and feeding the whole team drone reconnaissance before entry. **He adapts to other people's abilities more readily than to his own limitations.**

SESSION 17 **holds at 9.5** "*You teleport, Oracle predicts, and I figure.*"

2 Oracle 8.8

ALL-TIME He interoperates with everyone by construction: he heals whoever is hurt, buffs whoever is failing, and broadcasts warnings to the whole team. Session 15's resonance gave him a sanctioned interface with Lock-Step's powers.

SESSION 17 **holds at 8.8** An assist, and the warning that kept the team from shooting the wrong Oracle. Holds.

3 Edge 7.8

ALL-TIME **Fitted in from the first round of Session 16**: his target call was built around the team's kit, his first shot was aided by all four teammates, he turned two of Intrepid's attacks into better ones, and his rear guard bought Lock-Step the turns he needed.

SESSION 17 **7.3 → 7.8 (+0.5)** **The member who asked for this axis by name.** "*I need to form part of that and I want to see how do I need to move so we work together.*" He did not get the practice. His rebuilt kit fits the team better than the old one did (4.20), and he deferred to the one-on-one format the room agreed. **He passes Lock-Step.**

4 Lock-Step 7.5

ALL-TIME He physically integrates the team better than anyone, and has socially degraded the advantage by moving people without consent. In Session 16 the stated deduction came off: he asked before moving a teammate.

SESSION 17 **7.8 → 7.5 (−0.3)** **The team's coordination runs on improvisation, and he defended it as policy.** "*We don't really practice it just kind of you know just*," and "*our maneuvers is like dancing... you just fill it in the moment.*" It has worked — "*I think they're very successful so far*" — and it does not let a new member in. He ended the argument by asking the newcomer to explain everything he does. The maze ran on his teleports.

5 Intrepid 6.0

ALL-TIME He accepts positioning guidance from Oracle and Quasar-Force without ego, which is rarer and more valuable than it sounds in a character with this much raw power.

SESSION 17 **holds at 6.0** He took the assist and the nudge.

5.15 Cross-Team / Institutional Alliance Capital

Ability to obtain resources from, and coordinate with, outside organisations.

1 Quasar-Force 9.7

ALL-TIME **Built entirely from nothing.** It covers:

- Blüdhaven PD, and STAR Labs access through his father and in his own right.
- Two loans of suppression cuffs.
- Direct contact with Wonder Woman, and an open channel to a serving Green Lantern.
- A personal sanctuary offer from a founding member of the League, a week aboard the Watchtower, and Doctor Taleria's collaboration.

He is the team's institutional switchboard.

SESSION 17 **holds at 9.7** Every line was dead — "*The dimension you're trying to reach is currently unavailable*" — and none was lost. FLAG The roster still lists "*Exemplar's Dad's Lab*" among his lab-access tags; with Exemplar II gone, it is stale.

2 Lock-Step 7.2

ALL-TIME Extensive alliance capital, much of it in the wrong directions. The Marrow Syndicate will sit down with him, the Destined negotiate through him, the Burnout Kings stood aside for him, and three of the most significant magical figures on Earth hold positions on his future. Session 15 added the Grey Lanterns, the people of Kwa, the Destined (who now hold his words) and an audience he can move. Against: the Justice League, whose station he livestreamed.

SESSION 17 **holds at 7.2** The capital he built in the arena was across a universe: Earth X357's Titans liked him, laughed with him, and answered his questions. It does not travel home.

3 Oracle 7.0

ALL-TIME STAR Labs built his body and Nightwing takes his calls; Nightwing arranged him a private appointment with a STAR Labs board member, and in Session 14 he held the direct line to Wonder Woman in a crisis. The capital is real, narrow and largely inherited.

SESSION 17 **holds at 7.0** RETCON The Wonder Woman debrief the last edition recorded did not happen. Nothing was used, and nothing lost.

4 Edge 6.5

ALL-TIME **The newcomer arrived with a network**: Black Canary volunteered to train him, which brings the Birds of Prey, and Nightwing, operating as Batman, recruited and briefed him personally. A direct line into the Bat-family and a League-adjacent hero, held by someone who had been on the team for an afternoon.

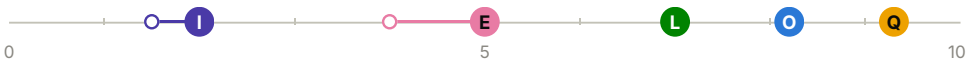

SESSION 17 **6.0 → 6.5 (+0.5)** FLAG CLOSED The Oracle who found him was Barbara Gordon, and the roster now carries her as a mentor. **Two principals of the Birds of Prey hold a stake in him.**

5 Intrepid 1.5

ALL-TIME Nightwing, and that is the complete list. A week inside the Justice League's headquarters produced nothing, and since Session 15 he has a social channel with a thousand followers he did not ask for.

SESSION 17 **holds at 1.5** Nothing changed.

5.16 Overall Non-Combat Value / Contribution

1 Quasar-Force 9.3

ALL-TIME Most of what this team accomplishes outside a fight runs through him: engineering, laboratory forensics, the drone network, the evidence chain, the police liaison, data custody across three sites, and a telekinetic domestic multiplier. **Remove him and the Titans stop producing intelligence**, and since Session 15 they also stop being hidden from the thing hunting one of them.

SESSION 17 **holds at 9.3** With every tool gone, he still found the cameras, identified the nullifiers and solved the maze's keypad in seconds. Holds.

2 Oracle 8.2

ALL-TIME Value counts what actually gets delivered, and Oracle delivers every day: medicine, the household, awareness, perfect recall, logistics, the Nightwing channel, the STAR Labs relationship, and in Session 15 the most specific forecast of his campaign.

SESSION 17 **holds at 8.2** The two heals that put the team on its feet. Holds.

3 Lock-Step 7.0

ALL-TIME The social layer is load-bearing and invisible on a capability chart: the Marrow Syndicate détente, the Burnout Kings standing down, the negotiated surrenders, and the stipend he extracted for the whole team. **Without him this team has no diplomacy at all**, and on Kwa a species exists because of a conversation he insisted on having.

SESSION 17 **holds at 7.0** The session's intelligence came out of his questions. Holds.

4 Edge 5.0

ALL-TIME In Session 16 he made the team plan and gave it its target. Outside a fight his value was Heightened Senses 2 on paper and a network into the Bat-family and the Birds; Logic −1 capped the rest.

SESSION 17 **4.0 → 5.0 (+1.0)** **A day off the battlefield, and he contributed more of it than anyone but the medic.** He fed the team, pushed for the formation, held the room's epistemics ("*assumptions*"), and gave the team its arena rule. He also raised the one moral question it had not asked itself.

5 Intrepid 2.0

ALL-TIME He patrols and finds things by walking around, which is not nothing. Session 14 added accurate witness testimony, and Session 15 a tail and the library.

SESSION 17 **1.5 → 2.0 (+0.5)** The rest call and the time deduction.

5.17 Overall Non-Combat Power / Potency

1 Quasar-Force 9.3

ALL-TIME First place has been his on the strength of breadth at the top end. He leads engineering, lab forensics, cyber, coordination and alliance capital, with high placings almost everywhere else, and is weak only in social, where one sincere mode works, and in law, where he is a diligent amateur.

SESSION 17 **holds at 9.3** Eleven firsts across seventeen, as last revision: Leadership, Engineering, Cyber, Field Investigation, Lab Forensics, Law, Empathic Support, Coordination, Alliance Capital, and both aggregates.

2 Oracle 7.4

ALL-TIME Medical 9.5, Sensory Awareness 9.0, Domestic Utility 9.0 and Empathic Support 9.0, with Leadership above 8 — several non-combat axes at 9.0 or above, which nobody but Quasar-Force matches.

SESSION 17 **holds at 7.4** First on Medical, Sensory, Domestic and Teaching. **The breadth that once won him this section still wins him second.**

3 Lock-Step 5.5

ALL-TIME Elite in one dimension and near-absent in every technical one, and he has risen because the non-technical dimensions keep turning out to matter: human intelligence, diplomacy, the only mission-vetting proposal anyone has made, and information operations.

SESSION 17 **holds at 5.5** First on Stealth and Social Engineering, and a tenth off first on Field Investigation.

4 Edge 4.2

ALL-TIME In Session 16, no firsts: second on Sensory, third on three more, fourth on six, and last on the five Logic-driven axes where his Logic of −1 broke a tie with Intrepid. **A combat specialist's non-combat profile, with one first-rank instrument in it.**

SESSION 17 **3.8 → 4.2 (+0.4)** Second on Sensory and now on Social Engineering, third on four more, and up on ten of the sixteen component axes (down on three, all of them the rebuild). Still a combat specialist's profile, with a second instrument in it — Ego 7 — and a day of organising on file.

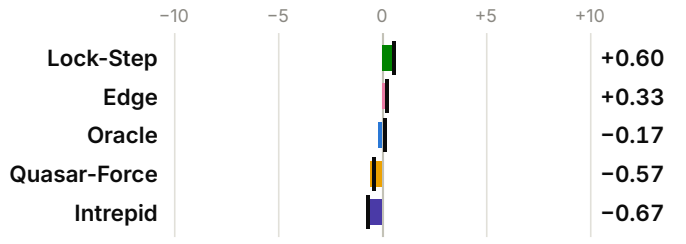

5 Intrepid 1.8

ALL-TIME He patrols and finds things by walking around. At Session 15 he placed last on all seventeen non-combat axes; at Session 16, on twelve.

SESSION 17 **1.6 → 1.8 (+0.2)** Last on thirteen of the seventeen; three of the other four are the Logic tie-breaks, and on the fourth (Medical) the newcomer fell below him. Up on three component axes, in the first session in which his calls carried.

NOTE *The vacancy, still partly filled.* Edge is fourth on both aggregates, behind Lock-Step. **The section's third place is still Lock-Step's, and the gap Exemplar II left in the technical middle is still open**; the rebuild added a social instrument, not a technical one.

§6 Capability Robustness & Conditionality

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

How well capability survives contact with adverse conditions: preparation denied, powers suppressed, countermeasures applied, support removed. Session 17 put the team in the most adverse condition it has faced, and two quieter tests sat inside it. Every outside line was cut. The facility was wired with power nullifiers, all switched off. A copy of one member turned his own kit against him. And the mother box at the centre of another member's powers reported that she cannot reach the thing that powers her.

6.1 Ability to Leverage Prep-Time

1 Quasar-Force 9.8

ALL-TIME Inventor, Scientific Expertise, Logic 7 and Brilliance 4, plus access to three laboratories including an air-gapped underground physics lab. **Prep-time is the condition under which he is most dangerous**: in Session 15 he named the order of work three times and delivered three builds in six days. In Session 16 a prep window of minutes still produced a drone sweep and a deduction.

SESSION 17 **holds at 9.8** Twenty-four hours of prep, and no parts, no tools and no lab. He spent them finding the cameras and the nullifiers, and on the box. Holds — the axis scores the ability, and this was the condition that starves it.

2 Oracle 8.0

ALL-TIME **Precognition 1 is prep-time as a superpower.** Twenty-four hours of lookahead is a planning window nobody else has, and Eidetic Memory means nothing he prepares is ever forgotten. Session 13 turned a prep window into a complete entrance map; Session 15 into an actor, a probability, a collision window and a destination.

SESSION 17 **holds at 8.0** He asked the module what would happen if they rested, and got the answer the module gives when it has nothing useful: "*You'll get some rest.*" He then used Intuition before the bout, which found the copier. Holds.

3 Lock-Step 4.5

ALL-TIME Powerful Hex can be configured in advance, which is real preparation, and temperamentally he improvises and skips the briefing. In Session 14 he argued *for* preparation for the first time, and in Session 15 he did it on Kwa: a scout, an exit, a healer at his elbow and an opening question. In Session 16 he left the planning to Oracle.

SESSION 17 **holds at 4.5** Both halves. He used the prep window to extract intelligence from the hosts (5.4), and refused to use it to rehearse: "*We can practice when we get back… we need a little bit more time than like a day.*" Holds.

4 Edge 3.0

ALL-TIME Logic −1, and nothing on the sheet that converts time into advantage except Heightened Senses 2 given time to listen. **He was the member who asked for the plan** in Session 16, and he came to the door already briefed by Nightwing.

SESSION 17 **2.5 → 3.0 (+0.5)** **The member who asked to use the time.** "*We have 24 hours. We can train for at least three of those 24 hours. We can come up with something. It's not so difficult as you think.*" Nobody took him up on it.

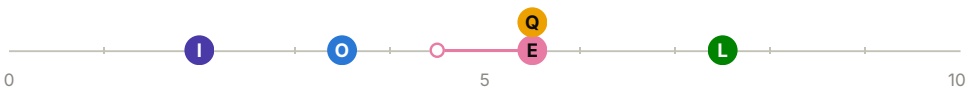

5 Intrepid 2.0

ALL-TIME Nothing on his sheet converts time into advantage; he is exactly as capable after a week of planning as after ten seconds.

SESSION 17 **holds at 2.0** He used the time the way his sheet suggests: sleep.

6.2 Ability to Function Without Powers

NOTE *For the first time this axis was not hypothetical. The bunk room and, by Four-Fold's reading, the arena are wired with banks of power-nullification projectors, "WAY more modules installed than what is required to shut down someone's powers." They were off. Four-Fold read them as the hosts' answer to anyone who turned against them, and was frozen for saying so.*

1 Lock-Step 7.5

ALL-TIME Ego 7 and the best social capability on the team are not powers. Depowered, he still talks his way into the nightclub, still gets the location out of the lieutenant, and still runs the room. **Session 15 was the proof at the largest scale available**: the encounter that decided the fate of a species was a conversation.

SESSION 17 **holds at 7.5** The session's best intelligence came out of him asking a loudspeaker questions. None of it needed a power. Holds.

2 Edge 5.5

ALL-TIME On the Session 16 sheet, Agility 7 and Black Canary's "*all-out*" training made him a fast fifteen-year-old with real martial training, Ego 4 and Logic −1 underneath the powers.

SESSION 17 **4.5 → 5.5 (+1.0)** RE-SPEC Melee 6 and Ego 7 are abilities, not powers, and both survive a nullifier. **Depowered, he is a trained fighter with the team's joint-highest social score.** He demonstrated the first half on a teammate: an ordinary punch, for 15. "*Damn, that hurt.*"

3 Quasar-Force 5.5

ALL-TIME Logic 7 survives suppression, and an intact Quasar-Force mind is still the best analyst in Blüdhaven. What does not survive is the body: an 84-pound fourteen-year-old with Melee −2. OOC **For him, "without powers" means without the mother box**, and Taleria could not point to where he ends and she begins.

SESSION 17 **holds at 5.5** Without powers he found the cameras with his own eyes, and he never wanted to test the rest: he pulled a nullifier out of a wall and switched it on, and nothing happened. VOLATILE What a nullifier field would do to a boy whose cells run on the box is unknown, and it is the worst-case version of this axis.

Tie: Edge over Quasar-Force at 5.5, broken on what survives the field: Edge's abilities are his own, and Quasar-Force's mind is partly the box's.

4 Oracle 3.5

ALL-TIME The hardest case on the axis. Vigilance 6 and Eidetic Memory persist as faculties, but **his powers are not equipment he carries; they are the body he lives in**, and the cybernetics keep him upright. "Without powers" for Oracle may not describe a survivable state.

SESSION 17 **holds at 3.5** ADVANCE Agility 5 is an ability and would survive. The rest of the entry stands.

5 Intrepid 2.0

ALL-TIME His mutant physiology *is* the character. Remove it and there is a sixteen-year-old with Logic 0, Agility 0, Vigilance 3 and no skills on the sheet.

SESSION 17 **holds at 2.0** Nothing changed.

6.3 Power Independence / Lack of Single Point of Failure

1 Intrepid 8.5

ALL-TIME Innate mutant physiology with no device, no artifact, no patron and no external dependency of any kind. For fifteen sessions **there was nothing to confiscate, disable or negotiate for.** Session 16 found something: a power thief took Sturdy 3 off him and used it herself for two rounds.

SESSION 17 **holds at 8.5** Nothing taken. Holds.

2 Edge 8.5

ALL-TIME In Session 16, **the second-most independent kit on the roster**: a Monster origin, so his powers are what he is, and a Constructible weapon, so taking it bought an enemy very little. What kept him behind Intrepid was that his attack powers were weapon powers.

SESSION 17 **8.0 → 8.5 (+0.5)** RE-SPEC **The weapon is gone; every power he has is now innate.** Elemental Blast, Burst and Supernova are his, with nothing to confiscate. What remains is the dependency he named himself — concentration, "*because if I don't, things could get bad*" — and an origin nobody, including him, fully understands.

Tie: Intrepid over Edge at 8.5, broken on record: Intrepid's independence has been tested and recovered; Edge's rests on a mind he says he has to work to keep steady.

3 Oracle 4.0

ALL-TIME Hardware rather than biology, which is a dependency, distributed across an integrated system rather than concentrated in one part. STAR Labs is a maintenance dependency, not an on-switch. Since Session 15 the module has a sensitivity to time phenomena, and one of his teammates has turned out to be one.

SESSION 17 **4.5 → 4.0 (−0.5)** **The hardware's sensitivity is confirmed, and it is not only to time.** At the staging point the module "*makes him feel weird*" and put him down before the abduction reached anyone else, and in the pocket dimension he said "*my power is broken.*" That is a second displacement reaction in three sessions, from a system he did not build and cannot audit.

4 Lock-Step 2.5

ALL-TIME Stacked dependencies. **The Vibranium chain whip supplies half his damage multiplier**, Protection Hex is a single power carrying his entire defensive profile, and **everything that makes him versatile and everything that makes him fragile is the same power.** Since Session 15, an outside order has a stake in what powers him.

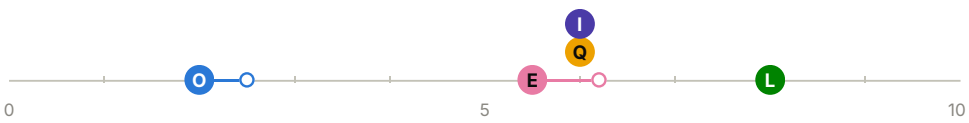

SESSION 17 **holds at 2.5** The teleport home failed on range, not on a dependency. Holds.

5 **Quasar-Force** 0.5

ALL-TIME One object. It cannot be forcibly removed without killing him, and it cannot be replaced. Every power he has flows through a single Apokoliptian-modified mother box with its own damaged personality and survival drive. Both of his Iconic Items carry the same two flaws, *Worn* and *Requires Origin X-Element Mother Box*. In Session 16 the single point held against the one attack built to exploit it.

SESSION 17 **1.0 → 0.5 (−0.5)** **The single point of failure turned out to have one of its own.** In an isolated dimension the box spelled out "*Cannot reach the Source... No connection. No response*," panicked mid-sentence, asked for help, and withdrew. His powers still worked in the bout — a grab and a toss — and VOLATILE nobody knows how long the box can run him without the Source.

6.4 Resilience Against Countermeasures & Neutralization

1 **Lock-Step** 8.0

ALL-TIME Protection Hex routes every incoming attack and effect through an Ego defence of 20, so there is no soft face, and Powerful Hex means a counter that works one round may not apply the next. Since Session 15 the Force infusion means phasing no longer makes a target immune to him. In Session 16 one perfect roll went through the Hex anyway, which is the dice, not a countermeasure.

SESSION 17 **holds at 8.0** He walked into a facility built to neutralise powers — cameras everywhere, nullifiers in every wall, freezing penalties — and his response was to work out the rules before anyone could use them on him. Holds.

2 **Quasar-Force** 6.0

ALL-TIME Viral catalogued his mind as unusually resilient, and Psyche's method worked twice. Session 15 narrowed the telepathic route with the circlet and answered Azimuth's search with the mask, and in Session 16 the mental countermeasure failed against him while the physical one — a strike through his damage reduction, and a bomb that ignores it — worked twice. MECHANICAL FLAG The circlet is *Worn*.

SESSION 17 **holds at 6.0** A new physical countermeasure worked on him for the first time: an elemental grab, Briar Patch's branches. The circlet stayed on. Holds.

3 **Intrepid** 6.0

ALL-TIME Resilient by sheer margin: the largest Health pool on the team, the highest physical defences, H-DR 3, Iron Will, Fearless, Enduring Constitution and a healing factor. **There is no clever answer to Intrepid, only a sufficient one** — and the sufficient answers have never been damage. Session 16 made it four sessions running: a power thief.

SESSION 17 **holds at 6.0** A Marvel ram before its edge, so Karma could not answer it — a sufficient answer that was, for once, damage. He got up. Holds.

Tie: Quasar-Force over Intrepid at 6.0, carried from Session 16: the same theft that took Intrepid's power failed against Quasar-Force's mind.

4 **Edge** 5.5

ALL-TIME In Session 16, **the answer to the counter that beat the team in Session 14**: Heightened Senses 2, plus Slow-Motion Dodge, damage reduction on both tracks and innate powers. Mental defences of 15 to 16 against it. Second on paper.

SESSION 17 **6.2 → 5.5 (−0.7)** RE-SPEC The senses stayed, and so did the paper answer to obscurement. The dodge went, and his Vigilance defence dropped to 13; the first countermeasure used on him on the new sheet went through that low door, a reaction Suppressive Fire that stunned him for the round. Fourth.

5 **Oracle** 2.0

ALL-TIME The most completely countered member of the team. In Session 14 Ecliptica beat him with an elemental grab he owns no power to escape and an area obscurement that removed his ranged specialism, without touching his body or his soft Ego. In Session 16 the brood found a third counter: a reaction that turned his Return Fire onto a teammate.

SESSION 17 **2.5 → 2.0 (−0.5)** **A fourth counter, and the most complete: his own kit, worn by someone else.** Facade had copied his powers before the bout. She stunned a teammate with his Suppressive Fire, and when he swung at her, she parried him with his own Point-Blank Parry into 34 damage and a stun. ADVANCE The two advances are declared, and neither answers the grab or the soft door. **Three sessions of FLAGs on this entry resolve to no change, and a new way to beat him was found.**

6.5 Power Failure Mode Lack-of-Severity

What happens when it goes wrong. High = benign failure.

1 **Oracle** 7.0

ALL-TIME A missed shot hits a wall, a failed heal costs Focus, and **his powers cannot kill anyone even when they work.** The structural concern dates from Session 12: the module accepts information from outside itself and renders it as its own output, and **a module whose failures look like results is benign only as long as someone remembers which roll produced them.**

SESSION 17 **holds at 7.0** His failures this session were a bad guess, a lost exchange and a module that put him to sleep at a staging point. None hurt anybody but him. Holds.

2 **Intrepid** 3.5

ALL-TIME Ground-Shaking Stomp is indiscriminate by design, and he has come within one roll of killing ordinary humans three separate times. The failure mode is manslaughter, mitigated only by the fact that everyone, including him, can see it coming.

SESSION 17 **holds at 3.5** Not triggered.

3 **Edge** 2.5

ALL-TIME On the Session 16 sheet a marksman's failures were a miss and, on a Fantastic, bleeding. **The real question was the power behind the weapon**: it slices through objects by concentration, it arrived with headaches and glowing eyes, and Black Canary volunteered to train him because it is dangerous.

SESSION 17 **3.0 → 2.5 (−0.5)** RE-SPEC **The power behind the weapon is now the weapon**, and he described its failure mode himself: "*I practice my concentration a lot because if I don't, things could get bad.*" The roster's summary is "*sweeping storms of blades that carve through everything around him at once.*" A failure of the area power is not a missed shot. Nobody has seen it fail.

4 **Quasar-Force** 2.0

ALL-TIME His powers fail loudly. Crush produced more than twice a target's maximum Health and killed a man, and commandeered by a telepath his telekinesis brought down the main containment field on a device that could compromise the stability of the universe. **His ceiling means a bad failure is not a casualty but an event.**

SESSION 17 **holds at 2.0** VOLATILE The precursor to the worst version of this axis appeared — a box frightened, isolated and saying "No! No! No—" — and nothing failed. Holds.

5 **Lock-Step** 1.8

ALL-TIME Berserk is a failure mode with no upper bound and no off switch, and it has fired twice. Since Session 15 the diagnosis is that his powers work by "*unconsciously altering time waves to make things into reality*," and OOC time powers are on the GM's banned list for a reason.

SESSION 17 **holds at 1.8** No Berserk, and a sixth clean engagement. Holds.

6.6 Solo Operating Capability

1 **Lock-Step** 7.5

ALL-TIME Self-inserting, self-extracting, nearly unhittable behind Protection Hex, and socially capable of talking his way through anything he cannot teleport past. He already operates alone by preference. In Session 16 the solo operator was alone when the enemy found him, and one roll took him from full to −24.

SESSION 17 **holds at 7.5** He chose to stay behind alone with the youngest, and he was right that it could have been a trap. Holds.

2 **Intrepid** 6.0

ALL-TIME A huge Health pool and fast regeneration make him extremely hard to kill alone. Logic 0, Vigilance 3 and no investigative capability mean he would never find anyone to fight.

SESSION 17 **holds at 6.0** He went through the door ahead of the team and walked the stepping puzzle alone under the orbs, until Lock-Step's step finished it. Holds.

3 **Edge** 6.0

ALL-TIME In Session 16, **the best solo profile on arrival after Lock-Step's**: a healing factor, innate powers, a dodge, and Heightened Senses 2 to find the fight and know who was lying in it. He did the one solo job of the fight, holding off Blitzkrieg alone.

SESSION 17 **6.5 → 6.0 (−0.5)** RE-SPEC The two features that kept him alive alone are gone — the healing factor and the dodge. The senses and the area power that would let him finish a fight alone are new. **He can find the fight and end it, and nobody heals him afterwards.**

Tie: Intrepid over Edge at 6.0, broken on survival: alone, the member who cannot be killed outlasts the member who can find the fight.

4 **Oracle** 5.0

ALL-TIME Self-healing, precognitive and perceptive, with no mobility power at all and 90 Health. Sent out alone he comes back with a complete reconnaissance product; what he cannot do alone is get anywhere or escape anything.

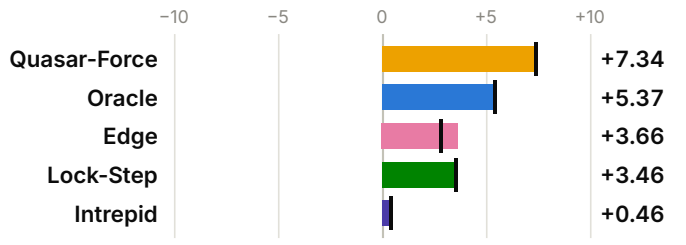

SESSION 17 **holds at 5.0** Nothing changed.

5 **Quasar-Force** 4.5

ALL-TIME Brilliant, mobile and made of paper: 60 Health, no healing of any kind, and sessions ending at 1, 4, −11, −12 and −30. **He is the most capable person on this team and the least able to operate without it.**

SESSION 17 **holds at 4.5** Frozen at the door, he was not alone because someone chose not to leave him. Holds.

§7 Overall Power / Ability / Value

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

7.1 Versatility & Adaptability

1 Lock-Step 9.5

ALL-TIME Powerful Hex means his power list is *any power he has the rank for, prerequisites ignored*; in play it has produced Quick Phase, Teleport Blind, Teleport Together, Disrupt Person, Real Jinx, a sleep effect and healing hands. **Nobody else on this team can change what they are mid-combat.** Session 15 added four roles that use no power at all, and a fifth nobody understands yet: a Grey Lantern in training.

SESSION 17 **holds at 9.5** In one day he was the interrogator, the producer, the diplomat, the transport and the striker. At the ceiling this scale allows him.

2 Quasar-Force 8.3

ALL-TIME One power set applied to everything — attack, defence, restraint, barriers, flight and heavy lifting — and since Session 15 roles far from telekinesis: fabricator of New God–grade hardware, research collaborator on his own biology, surveillance operator, and the team's switchboard to the League and the Corps. **His versatility comes from imagination, not options.**

SESSION 17 **holds at 8.3** Counter-surveillance by eye, puzzle-solver, maze navigator and controller, with every tool he usually uses out of reach. Holds.

3 Oracle 7.0

ALL-TIME Five distinct battlefield jobs — ranged attacker, healer, reviver, morale restorer, scout and overwatch — plus field reconnaissance, a live network interface and a tutoring role. Session 14 was the counter-case: pinned and blinded, most of the jobs became unavailable at once.

SESSION 17 **holds at 7.0** Healer and forecaster; the other jobs were not asked for. Holds.

4 Edge 5.5

ALL-TIME A specialist with more range than the word suggests, on the Session 16 sheet: two damage tracks, a called shot that disarmed a phaser, a rear guard, and a sensory role nobody else on the team can fill.

SESSION 17 **5.0 → 5.5 (+0.5)** RE-SPEC Fewer tracks and more shapes. He lost Focus damage, and gained an area attack, a free attack and a second action every round. Off the field he showed a second job: the room's quartermaster and its conscience.

5 Intrepid 2.3

ALL-TIME One job, done superbly. Session 15 gave him a second, briefly: he tailed a vehicle across the city by air.

SESSION 17 **holds at 2.3** The one job, plus walking a puzzle floor while orbs fired at him. Holds.

7.2 Power Mastery / Control

1 Quasar-Force 9.5

ALL-TIME Explicitly noted as very gifted at gaining precision and control, and the play backs it: he disarms individually, cuffs a sleeping man without waking him, guides a teammate's fist into a target, and in Session 16 took a telekinetic through her own force field and crushed Stote to a knockout rather than a body. **The fly-by-wire framing means his ceiling is bounded by what he thinks to try.**

SESSION 17 **holds at 9.5** Grab and toss in one action, exactly where he meant it. VOLATILE The experiment Taleria prescribed — telekinetic air-writing for the box to steer — finally ran, and it produced words for the first time, after hours, through a buzzing he could not concentrate past. The words were a plea. Holds.

2 Oracle 7.8

ALL-TIME He uses his module correctly every time, holds actions, and reassesses targets on precognitive input. **Knowing exactly what your instrument did and did not tell you is mastery**, and in Session 15 he reported a failed forecast honestly. In Session 16 Charmed Life turned an opening Marvel into a super-Marvel on the right target.

SESSION 17 **holds at 7.8** He asked Intuition the right question before the bout and got the right answer. Then he walked into his own power on someone else. Holds.

3 Edge 6.5

ALL-TIME **Mastery of the weapon was on record in Session 16; mastery of the power was not.** He made a called shot at a hand-held device, with trouble for the disarm, and hit; and he chose Suppressive Fire three times when Stopping Power would have done more Health damage, a throttle used on purpose.

SESSION 17 **holds at 6.5** RE-SPEC Now the power is the weapon, and the sheet says how he holds it: Discipline 4, the maximum, and a Signature Attack on the Blast. What he said in play is that it takes work — "*I practice my concentration a lot*" — and in his first use of it on the record he hit twice and knocked his opponent out. The throttle he used to show by choosing Focus damage he now shows by choosing how much Focus to spend, and he spent heavily. Holds.

4 Intrepid 4.0

ALL-TIME Improving visibly — he takes positioning guidance before stomping — and his own stated fear is that he cannot control it. In Session 16 the stomp went where Oracle's module pointed it and hit only an enemy.

SESSION 17 **holds at 4.0** Nothing tested it.

5 Lock-Step 3.5

ALL-TIME Chaos magic he has not mastered: two Berserk episodes he could not control, a botched blind teleport, and a hex system whose power comes from its unpredictability. In Session 14 he dosed an effect deliberately for the first time, and in Session 15 he found out he does not know what his powers are. "*So I'm like a grey lantern, but like in training.*"

SESSION 17 **holds at 3.5** A precise Phase Self through a handshake, a Protection Hex that cleared the orb puzzle, and a telepathic link that found nobody — correctly. Holds.

7.3 Growth Trajectory / Remaining Headroom

NOTE ON FORESHADOWING *This document treats five items as* VOLATILE *GM foreshadowing: not evidence of capability, but not nothing either. Four are the Session 15 Grey Lantern's identifications — Intrepid as Superman, Lock-Step as Green Lantern, Quasar-Force as Captain Atom, Oracle as Batman — the second of which was literally true within the hour. The fifth is Edge's legend. Session 17 added a sixth kind of item:* ***another universe's Teen Titans****, whose mentor "goes by Batman" and "used to be called Raven," and whose members mirror nobody on this team. Nothing in it is scored.*

1 Quasar-Force 9.7

ALL-TIME The steepest curve on the team and the most consequential. The mechanical half is a published Rank 3→6 plan that ends in spacetime manipulation, the longest runway on the roster. The unmechanical half is the mother box, and Session 15 moved it further than any session before: "*When you learn, she learns.*" RULING Energy Absorption is the remaining Rank-4 survivability purchase.

SESSION 17 **holds at 9.7** **The Awakening channel produced sentences.** The box spoke in words for the first time on record: "*Quasar?… I am here… I am still with you. Don't be afraid… I will find a way.*" What she said was that she cannot reach the Source. The headroom is unchanged; the dependency it rests on is scored in 6.3.

2 Lock-Step 9.5

ALL-TIME **Powerful Hex scales with rank as a blank cheque**, and three of the most significant magical figures on Earth are competing over who trains him. Session 15 added the most headroom on the board, all of it plot: a Grey Lantern succession, a secondary ring that will charge once he remembers the oath, and a diagnosis — lantern-derived, linked to Oa, "*unconsciously altering time waves.*" RULING Time Powers are banned, so whatever the ring does will arrive as GM-granted plot.

SESSION 17 **holds at 9.5** "*Eventually, I will remember the vow, okay, guys?*" — and Intrepid's verdict on the order, typed into chat, that grey is "*the color of 'Lazy'.*" Holds.

3 Edge 8.0

ALL-TIME **The newest member had the third-longest runway** in Session 16: all Rank 3.5 advances taken, Quick Learner, a League-adjacent hero training him, and behind all of it the legend — a reborn ancient weapon whose true name is lost.

SESSION 17 **holds at 8.0** RE-SPEC The rebuild spent the runway's first stretch. Two Rank-4 powers are already on his Rank 3→4 track (Lightning Actions and Supernova), and Discipline is at its maximum level of 4. In exchange, the legend now has a mechanical expression: an area power that fits "*cut down armies.*" The roster's profile no longer hedges either: "*An ancient army-slaying cataclysm reborn.*" VOLATILE If the legend is literal, this is still the axis it moves most. Holds.

4 Oracle 7.5

ALL-TIME STAR Labs hardware can be revised, and Precognition has obvious room to extend: growth by upgrade rather than by unfolding. Session 14 made his module a component in a League-supervised build; Session 15 added the Grey Lantern resonance. **The single highest-value purchase available to him** is any ego- or logic-based power that projects strength.

SESSION 17 **holds at 7.5** ADVANCE FLAG CLOSED The two advances bought Agility and Accuracy, completing his Rank 3→4 track. **This entry was not understating him**, and the highest-value purchase now waits for Rank 4 at the earliest.

5 Intrepid 6.0

ALL-TIME On the sheet he is linear: bigger numbers on the same four things. **Off the sheet, Session 15 suggested a discontinuity** — a time traveller, a hive mind and a viral stream all called him Superman — and he answered with the first ambition on his file: "*Not yet anyway.*" **If the GM is foreshadowing, this is the most important line in his file. If not, it is a joke, and this entry falls back to 4.5.**

SESSION 17 **holds at 6.0** Nobody called him Superman. He did call a gladiator uniform "*my new uniform from going forward*," which is not the same thing. Holds.

7.4 Justice League Readiness — Capability

Capability only. Character is 1.15.

1 Quasar-Force 9.0

ALL-TIME Asked who the smartest person in the Justice League was, Wonder Woman pointed at him. In Session 15 he did League-grade work inside the League's headquarters: three pieces of hardware in six days, one of which beat a known villain team's transport in play. **He is the only member whose capability would be League-relevant today rather than in five years.**

SESSION 17 **holds at 9.0** Without a lab, he found every camera in a hostile facility and read its nullifiers on a single check. Holds.

2 Oracle 7.5

ALL-TIME Precognition and healing are precisely the two capabilities a large distributed organisation values most and fields least. Session 14 is what a vetting officer would find in the combat log: **a support specialist with no mobility, no escape and no Focus damage reduction can be switched off by a competent opponent.**

SESSION 17 **holds at 7.5** ADVANCE The advances were declared and bought none of the three things in that sentence, and a copy of him found a fourth way to switch him off. Holds.

3 Edge 7.5

ALL-TIME **A League-shaped specialist** in Session 16: the League has long carried a marksman, and his mentor knows what one looks like. Best ranged attack on the team, the only Heightened Senses, a healing factor and a dodge.

SESSION 17 **7.0 → 7.5 (+0.5)** RE-SPEC **Area artillery with the team's best single-target line and a guaranteed first turn** is an even more League-shaped profile than a marksman's. An evaluator would want to see the Supernova used once, and an answer about what powers it.

Tie: Oracle over Edge at **7.5**, broken on record.

4 Lock-Step 7.4

ALL-TIME Strategic teleportation is a League-scale logistical asset and Powerful Hex a League-scale wildcard. Session 13 closed a universe-scale incident, and on Kwa a Lantern called for the Justice League and the Titans answered in its place. What the scenario required was first contact without a fight, the capability the League prizes most and fields least.

SESSION 17 **holds at 7.4** The newcomer passes him by a tenth on the rebuild.

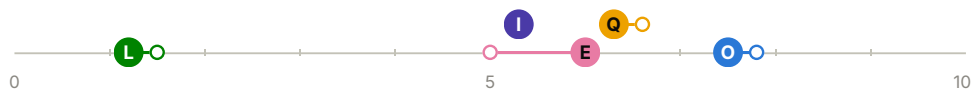

5 Intrepid 6.0

ALL-TIME Genuine top-tier durability and area damage at his rank. **The League has several of him, and none of them is the reason it works.** The effects that removed him from fights in Sessions 14 and 16 are ones League-tier opponents have as a matter of course.

SESSION 17 **holds at 6.0** Nothing changed.

7.5 Justice League Readiness — Overall

Character (1.15) and capability (7.4) combined, plus the situational blockers that belong to neither.

1 Oracle 7.5

ALL-TIME First on character by a wide margin and second on capability, with no blocker attached. **He was the only member who could be put forward without a conversation about caveats first**, and in Session 14 he reported his own defeat to the sponsoring Justice Leaguer, unprompted, on the night.

SESSION 17 **7.8 → 7.5 (−0.3)** **The caveat conversation now exists.** A sponsor would want to discuss two things before forwarding him: what he said when the newcomer asked about the errand, and "*most of the people telling us what to do don't know what they're doing.*" Still first.

2 Quasar-Force 6.3

ALL-TIME He leads capability outright, sits high on character, and has been personally endorsed by the acting Batman, and he is nonetheless years away. **The blockers are situational rather than personal:** his age, an open fatality investigation, and OOC an Apokoliptian-modified New Genesis artifact bonded to his brain.

SESSION 17 **6.6 → 6.3 (−0.3)** The character side fell half a point, on the sentence about the lab.

3 Edge 6.0

ALL-TIME In Session 16, a clean first session, a League-adjacent mentor willing to vouch for him, and capability in a role the League understands. The blockers were his age, an afternoon of record, and what the legend says he is.

SESSION 17 **5.0 → 6.0 (+1.0)** Both halves rose: character by two points on the objection, and capability by half a point on the rebuild. **He passes Intrepid.**

4 Intrepid 5.3

ALL-TIME A clean record and top-tier durability and area damage for his rank. **Unready rather than unsuitable, and the gap is experience.**

SESSION 17 **holds at 5.3** Nothing changed.

5 Lock-Step 1.2

ALL-TIME Real League-scale assets underneath a character file that would not reach a vote. **Doctor Fate has publicly declared him a danger to the world**, and since Session 15 a panel will not get past a solicited killing through a villain team. A cosmic order has vouched for him; the League has never heard of it.

SESSION 17 **1.5 → 1.2 (−0.3)** The character side fell half a point, on the doctrine.

7.6 Overall Value / Contribution

The whole question, combat and non-combat together: what does the team lose if this person walks away tomorrow?

1 Oracle 9.1

ALL-TIME First in combat contribution, second in non-combat contribution, first in standing and first in the pecking order, and the moral spine of a group that badly needs one. He is the only healer, the only dedicated buffer, the household and the medic. In Session 16 every recovery of the fight went through him.

SESSION 17 **holds at 9.1** Two of the five could not have got up without him. Holds.

2 Quasar-Force 8.9

ALL-TIME Almost exactly as valuable, by a completely different route: the analytical engine, the intelligence apparatus, the best control and mobility in the party, joint-highest base damage, and the widest institutional reach on the roster. **The gap to Oracle has always been the healing monopoly**, plus the fact that one strike can remove him from a fight.

SESSION 17 **holds at 8.9** The maze, the cameras and the enemy healer. Holds. *Volatile* at two tenths.

3 Lock-Step 8.3

ALL-TIME Monopolies of his own: the only person on this team who can move it strategically and the only person who is good with people. **Against:** he takes his liabilities with him, and some of what he generated may cost more than it returns. In Session 16 he was the way out.

SESSION 17 **holds at 8.3** The intelligence, the frame for the bout, and the maze teleports, against the door. Holds.

4 Edge 7.3

ALL-TIME What the team would have lost if he had walked after Session 16: the best ranged shot on the roster, the only Heightened Senses, the shot that denied the brood its objective, and the rear guard that let the extraction start.

SESSION 17 **7.0 → 7.3 (+0.3)** Add the team's second area attack, its fastest knockout, its food, and the only voice in the room that asked whether the errand was their problem.

5 Intrepid 6.7

ALL-TIME The team's tank: the member who absorbs the damage that would kill anyone else and ends fights outright, the only real tank and the cheapest member to field. **What the team loses if he walks is the thing that stands between more fragile people and whatever hits them first.**

SESSION 17 **holds at 6.7** Nothing changed.

7.7 Overall Power / Potency

1 Quasar-Force 9.0

ALL-TIME The highest ceiling on the team: first in engineering, lab forensics, cyber, coordination and alliance capital, first in crowd control, grappling, personal mobility, objective creation and combat synergy, and the steepest growth curve on the roster. **What holds the power ranking below the ceiling has always been the floor.**

SESSION 17 **holds at 9.0** Nothing on the sheet moved.

2 Lock-Step 7.7

ALL-TIME The highest versatility on the team by a distance, and first on social, team mobility, de-escalation, rescue, stealth and solo operation, held below first by a shallow Focus pool, the weakest power mastery on the team, and a non-combat profile that is empty outside the social column.

SESSION 17 **holds at 7.7** Nothing on the sheet moved.

3 Oracle 7.4

ALL-TIME First on seven combat axes and on medicine, sensory awareness, domestic utility and teaching. **This axis has never measured his value** (7.6 does); it measures his power, and his power is narrow in the places a head-to-head comparison counts.

SESSION 17 **7.3 → 7.4 (+0.1)** ADVANCE The heavier line and two points of defence.

4 Edge 7.0

ALL-TIME In Session 16, second on combat potency, fourth on non-combat potency and third on growth: **a sharp specialist with a long runway.**

SESSION 17 **6.5 → 7.0 (+0.5)** RE-SPEC Second on combat potency by a smaller margin, an area attack, and Ego 7 under the non-combat profile. Still fourth.

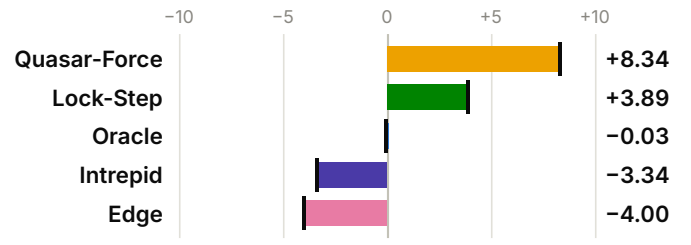

5 Intrepid 6.3

ALL-TIME Dominant in a narrow band, and genuinely dominant there. **He stays last here without losing anything**, because a combined power ranking also counts the seventeen non-combat axes.

SESSION 17 **holds at 6.3** Nothing changed.

The inversion between 7.6 and 7.7 holds. Oracle is first on value and third on power; Quasar-Force is second on value by two tenths and first on power by 1.3. Edge is fourth on both, and Intrepid last on both.

§8 Fame (Exposure)

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

Exposure only — how widely known, independent of whether the opinion is good. Opinion is Section 9.

NOTE ***Session 17 was broadcast, to an audience in another universe.*** *The hosts produce "arena ball" for viewers who "like to see superheroes fight alternate world versions of their same team", with cameras in every room and promised replays "like Dragon Ball Z." Lock-Step played to it on purpose ("if we're being interdimensional famous, right?"). On it, Quasar-Force told another universe's Titans that he will not age and where his father works, and Lock-Step gave his first name.* ***None of it reaches Earth****: no public, outlet, institution or community on this team's world saw any of it, and the hosts promise to return the team to the moment it left. This section measures exposure on Earth, so it holds on every axis. The interdimensional exposure is recorded in §1.6 and §10.4, where it is a discipline finding rather than a fame one.*

8.1 Fame — Public

1 Quasar-Force 9.3

ALL-TIME The most photographed member of the team by a wide margin. He hovered upside down outside a bank for an entire robbery in a cosmic-mural nanosuit, flew a 120-foot yacht five hundred feet into the air over a party of teenagers, and killed a man in an incident that generated protests, a threatened lawsuit and a televised expert theorising about his mental state. He is publicly identified, looks eleven, and flies everywhere. In Session 15 he was the centrepiece of the stream that went viral.

SESSION 17 **holds at 9.3** Nothing reached Earth's public.

2 Lock-Step 8.5

ALL-TIME Word-of-mouth famous, and deliberately so: hashtags, an Instagram Day, a bank rescue in front of news cameras, and Blüdhaven's teenage social scene. Since Session 15 he is a trending broadcaster with a co-producer, a house drone, a channel and a sign-off.

SESSION 17 **holds at 8.5** He performed for the producers' cameras, which is a different audience. Holds.

3 Oracle 4.0

ALL-TIME Minimal public visibility, and Extreme Appearance means anyone who *does* see him remembers exactly what they saw. In Session 15 he appeared on the stream and got a channel.

SESSION 17 **holds at 4.0** Nothing changed.

4 Intrepid 3.5

ALL-TIME A Secret Identity, minimal logged visibility, and fights mostly indoors. Until Session 15 he was nearly invisible; the viral stream then introduced him with its most shareable line — "*maybe the next Superman.*"

SESSION 17 **holds at 3.5** Nothing changed.

5 Edge 2.0

ALL-TIME A public identity his own entry calls "*not very well known*," white hair and glowing eyes, and no logged public appearance. FLAG The roster's condensed entry once listed his identity as "???"; it now reads *Public*, which settles it.

SESSION 17 **holds at 2.0** Nothing changed.

8.2 Fame — Media

1 Quasar-Force 9.6

ALL-TIME The primary media-footage subject of the bank robbery, the yacht flight against the moon, and a fatality that put a named science advocate on television. **He is the most covered member of this team by a wide margin, and the coverage has been accelerating**, most recently with a week of Watchtower lab footage.

SESSION 17 **holds at 9.6** Nothing was published on Earth.

2 Lock-Step 9.0

ALL-TIME Media-native by deliberate choice. In Session 15 he stopped being only a source for the media; for a week he *was* the media. VOLATILE The five teenagers he captioned were the five he fought in Session 16, and the one he cuffed was left in a mob warehouse.

SESSION 17 **holds at 9.0** He was content for somebody else's show this time. Holds.

3 Oracle 4.2

ALL-TIME Minimal footage, though Extreme Appearance guarantees anything captured is memorable.

SESSION 17 **holds at 4.2** Nothing changed.

4 Intrepid 3.8

ALL-TIME A Secret Identity, and fights where cameras aren't. Since Session 15, "*the next Superman*" is a headline somebody else has already written.

SESSION 17 **holds at 3.8** Nothing changed.

5 Edge 2.0

ALL-TIME No media record on file.

SESSION 17 **holds at 2.0** Nothing changed.

8.3 Fame — Law Enforcement (Police, Criminal Justice System)

The full criminal-justice apparatus at every level — police, detectives, prosecutors, criminal courts, corrections, and federal enforcement bodies. Corporations, research institutions, civil courts, schools, and city government are 8.4.

1 Quasar-Force 9.5

ALL-TIME **On more criminal-justice records than the rest of the team combined.** Blüdhaven PD knows him by name; detectives hold him as a cooperating witness across the Lex-Corp case; **a criminal court holds an open death investigation with his name on it**; and ARGUS knows him because Amanda Waller tasked him personally.

SESSION 17 **holds at 9.5** Nothing added or removed.

2 Lock-Step 4.6

ALL-TIME Until Session 15, known to this apparatus as a pattern rather than as a person — habitual breaking and entering and an accumulating truancy record. Session 15 gave the pattern a name and a publication record, and the cuffed teenager left in the warehouse in Session 16 will reach the apparatus the moment anyone finds her.

SESSION 17 **holds at 4.6** Nothing reached the apparatus.

3 Oracle 4.5

ALL-TIME Present at the same incidents and rarely the one talking to officers. Restrained suspects and no bodies is a good outcome and a quiet one.

SESSION 17 **holds at 4.5** Nothing changed.

4 Intrepid 2.5

ALL-TIME A Secret Identity and no logged contact of any kind.

SESSION 17 **holds at 2.5** Nothing changed.

5 Edge 1.5

ALL-TIME No record. His backstory begins with an assault near him that ended with the attacker's weapon sliced to pieces; whether that reached a police report is not on file.

SESSION 17 **holds at 1.5** Nothing changed.

8.4 Fame — Other Non-Superheroic Institutions

Everything institutional ***outside*** *the criminal-justice system: corporations, research bodies, civil courts, licensing and revenue systems, schools, and city government.*

1 Quasar-Force 8.0

ALL-TIME Lex-Corp's legal department has him identified by name and has issued a cease-and-desist. STAR Labs knows him through his father and directly: two loans of suppression cuffs, a meeting with its Blüdhaven CFO, and Doctor Varga's interest. In Session 15 he traced a STAR Labs vehicle and parked a drone in its warded garage. **Corporate and scientific rather than judicial, and broader than anyone else's.**

SESSION 17 **holds at 8.0** Nothing changed.

2 Oracle 6.2

ALL-TIME STAR Labs built his body, which makes him a permanent case file at a major research institution. School adds a district record, and a museum's staff knows the cyborg who mapped their entrances.

SESSION 17 **holds at 6.2** Nothing changed.

3 Lock-Step 5.0

ALL-TIME No employer, no registrations, no assets, a truancy record, a stipend implying a payer, and since Session 15 a platform presence and a STAR Labs employee's face on his stream.

SESSION 17 **holds at 5.0** Nothing changed.

4 Intrepid 3.0

ALL-TIME A school district record, a Secret Identity and a social-media account he did not set up.

SESSION 17 **holds at 3.0** Nothing changed.

5 Edge 2.0

ALL-TIME A school record with grades that were "*already bad*" before the powers arrived.

SESSION 17 **holds at 2.0** Nothing changed.

8.5 Fame — Superhero Community

1 Quasar-Force 9.0

ALL-TIME Nightwing has observed him since before he joined the team, OOC Bruce Wayne holds the dormant mother-box shell, Wonder Woman has met him several times, and Guy Gardner gave him an open information channel. Session 14 added a founding member who decided he needed protecting and a League researcher; Session 15 a week aboard the Watchtower and a Grey Lantern's verdict.

SESSION 17 **holds at 9.0** Nothing changed.

2 Lock-Step 8.0

ALL-TIME Three of the most significant magical figures on Earth have opinions about him, and in Session 14 he became memorable to the Justice League in the way nobody wants to be, wrapped in the Lasso of Truth. **Everyone in this community who has met him remembers which one he was.**

SESSION 17 **holds at 8.0** Nothing changed.

3 Oracle 6.5

ALL-TIME Mentor (Nightwing), a body built by STAR Labs, and the member who answers when somebody senior asks how the team is doing. In Session 14 he called Wonder Woman to report the loss, which is the interaction a senior hero remembers.

SESSION 17 **holds at 6.5** Nothing changed.

4 Edge 5.0

ALL-TIME **Known to the right people before he was known to the team**: Black Canary volunteered to train him, the Birds of Prey were the ones called when he went looking for help, and Nightwing recruited him personally.

SESSION 17 **holds at 5.0** The person who found him and called the Birds was Barbara Gordon, which the last edition already counted. Holds.

5 Intrepid 4.5

ALL-TIME Mentor (Nightwing) was very nearly the complete list until Session 15, when a viral stream shot inside the Watchtower called him the next Superman. **He has never done anything this community would talk about, and it now has something to talk about.**

SESSION 17 **holds at 4.5** Nothing changed.

8.6 Fame — Supervillain Community

1 Quasar-Force 9.3

ALL-TIME Both recognised on sight and specifically discussed. Gangers shout "Titans!" on spotting him, every captured villain has met him because he conducts the interrogations, and the Destined, Viral, Hexcaliber and Aegis-Girl have all targeted him. **In Session 16 the underworld had a written answer to him and said so**: fame, fragility, grappling.

SESSION 17 **holds at 9.3** Nothing changed.

2 Lock-Step 8.5

ALL-TIME Recruited by Shadow-Boxer and the Red Aegis boss, the Destined's negotiating partner, on file with the Marrow Syndicate, and the subject of a bespoke temporal artifact. **As of Session 15 the underworld also knows his rate.**

SESSION 17 **holds at 8.5** Nothing changed.

3 Intrepid 5.0

ALL-TIME Known by effect rather than by name: the one who ends fights. Since Session 15, also known by a public comparison to the one hero every villain in the world has a plan for.

SESSION 17 **holds at 5.0** Nothing changed.

4 Edge 4.0

ALL-TIME **Introduced to the underworld in one afternoon, by the people he beat**, and two of the five walked away to tell it: "*They keep coming back up like Daisys!*"

SESSION 17 **holds at 4.0** Nothing changed.

5 Oracle 3.5

ALL-TIME Recognised and the least discussed; the villains who fight him mostly learn they can't hit him. Session 14 supplied a louder story, a goddess who drained him to 3 Focus, and in Session 16 somebody on the other side had studied him well enough to answer his Return Fire.

SESSION 17 **holds at 3.5** Nothing changed on Earth. In another universe, a power copier studied him well enough to become him.

8.7 Fame — Civilian Life / Non-Superheroic Identity Exposure

How exposed the person behind the mask is.

1 Quasar-Force 9.5

ALL-TIME Total. Endo Wenas is publicly identified, his parents are known and reachable in Slate Hill, his father's employer is known, and his family's involvement with a clinician is documented. **There is no mask to be behind.**

SESSION 17 **holds at 9.5** He told another universe where his father works, which Earth already knew.

2 Oracle 6.0

ALL-TIME Wade Dobson is not concealed, and Extreme Appearance means concealment is not available to him anyway. What limits the score is that few people are looking.

SESSION 17 **holds at 6.0** Nothing changed.

3 Lock-Step 5.0

ALL-TIME For fourteen sessions he did not appear to have a civilian identity at all. **Session 15 supplied both halves at once**: a name, Eric Williams, and its link to the hero, held by parties outside Earth's institutions.

SESSION 17 **holds at 5.0** "*You could call me Eric. It's not like we'll ever meet again.*" One more party outside Earth's institutions holds the first half. Holds.

4 Edge 4.5

ALL-TIME Murphy King has a public identity, "*not very well known*," and a face that is hard to mistake. A school, a family the roster does not describe, and mentors whose names are public.

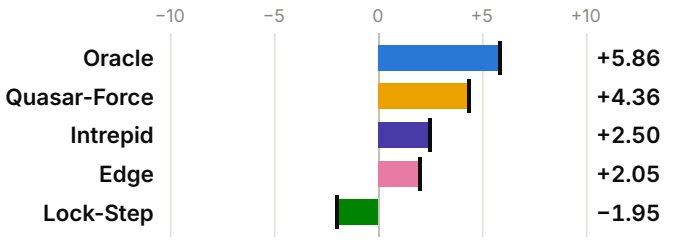

SESSION 17 **holds at 4.5** Nothing changed.

5 Intrepid 1.0

ALL-TIME The only fully Secret Identity on the roster, maintained without a single logged lapse.

SESSION 17 **holds at 1.0** Not one, even here.

§9 Reputation / Opinion

Section mean on the composite scale, −10…+10; black ticks mark Session 16 (§10.1.3).

Session 17 happened in another universe, out of sight and reach of every party this section scores, so it holds everywhere but one cell. The one move is Edge's reputation in the superhero community, on the roster's confirmation of his second mentor. RETCON *The last edition's references to a Wonder Woman debrief after the warehouse are withdrawn throughout. Three things Session 17 recorded would move this section the day they reach the people it scores, and none of them has:*

- *Oracle's view of the adults above him.*
- *Quasar-Force's statement about the lab.*
- *Lock-Step's doctrine.*

9.1 Reputation — Public

1 Oracle +7.0

ALL-TIME Nothing negative attaches to him and nothing ever has. He heals people, asks for surrender first, is polite, and is visibly a teenager doing a hard job well. The viral stream of Session 15 introduced him as "*the guy that always tells us what we do wrong and tries to fix it*," which is a teammate's joke and an accurate résumé.

SESSION 17 **holds at +7.0** Nothing reached the public.

2 Intrepid +5.5

ALL-TIME Low salience because of the Secret Identity, and uniformly positive within that. **Since Session 15 the public has a story to attach to him, and it is the best one available:** "*maybe the next Superman.*"

SESSION 17 **holds at +5.5** Nothing reached the public.

3 Lock-Step +4.5

ALL-TIME Genuinely popular with the demographic that matters most for word-of-mouth, and carrying real risk. **Net positive, with a fuse in it**, and Session 15 lengthened the fuse: on the same channel that trended, he mocked five released teenagers by face.

SESSION 17 **holds at +4.5** Nothing reached the public.

4 Edge +2.0

ALL-TIME Public but "*not very well known*," with nothing for or against him on record. His first public story, when it comes, could be a rescue or a legend about a monster.

SESSION 17 **holds at +2.0** Nothing reached the public.

5 Quasar-Force +1.5

ALL-TIME **The highest variance on the team; the ranking reflects net position, not dislike.** He is the most beloved and the most controversial figure the Titans have: a spectacular, obviously good-hearted flying child, and the boy who killed a man. **The death is still the headline. Since Session 15 it has competition.**

SESSION 17 **holds at +1.5** Nothing reached the public.

VOLATILE *Two stories have not surfaced*, and nothing in Session 17 changed either: the Session 14 museum theft, and three teenagers left unconscious in a mob warehouse — one in handcuffs — by a team whose public voice had mocked all five of them a week earlier.

9.2 Reputation — Media

1 Lock-Step +7.0

ALL-TIME Media-native. He poses, posts and supplies quotable lines, and the handcuff ritual is a recurring bit that writes its own headline. Session 15 was a larger audience with more ammunition in it, including material a hostile outlet would want.

SESSION 17 **holds at +7.0** Nothing published on Earth.

2 Oracle +6.0

ALL-TIME The safe, sympathetic angle: a cyborg teenager who heals people and asks criminals to surrender. There is no negative story about him available.

SESSION 17 **holds at +6.0** Nothing changed.

3 Intrepid +4.5

ALL-TIME A classic-looking hero in a red cape, with nothing to write about and nothing bad to write. Since Session 15 the Superman line writes his headline for him.

SESSION 17 **holds at +4.5** Nothing changed.

4 Edge +1.5

ALL-TIME No coverage on file. The angle an outlet would find is the most striking one on the team — white hair, glowing eyes, a teenager trained by Black Canary — and the most dangerous if the word *monster* ever gets attached to it.

SESSION 17 **holds at +1.5** Nothing changed.

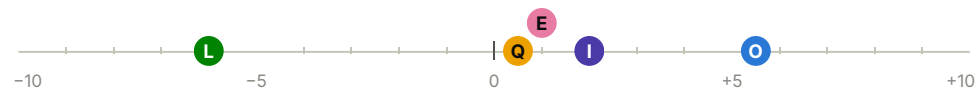

5 Quasar-Force 0.0

ALL-TIME **The best footage and the best controversy at once, which is the worst possible combination.** Session 15's week of Watchtower footage brought him to exactly neutral by giving every outlet a second, much better story about the same boy.

SESSION 17 **holds at 0.0** Nothing changed.

9.3 Reputation — Law Enforcement (Police, Criminal Justice System)

Same scope as 8.3 — police, detectives, prosecutors, criminal courts, corrections, and federal enforcement, at every level.

1 Oracle +5.5

ALL-TIME He demands surrender before engaging, heals the people he fights, and has never generated an incident report. Officers arriving after an Oracle engagement find restrained suspects and no bodies, which is the single thing this apparatus most wants from a costumed teenager.

SESSION 17 **holds at +5.5** Nothing reached the apparatus.

2 Intrepid +2.0

ALL-TIME Unknown to them and carrying nothing negative.

SESSION 17 **holds at +2.0** Nothing changed.

3 Edge +1.0

ALL-TIME Unknown to them, no record, and a first fight in which everyone he dropped was knocked out rather than killed. Below Intrepid because his public identity gives the apparatus a name to attach anything to.

SESSION 17 **holds at +1.0** Nothing changed.

4 Quasar-Force +0.5

ALL-TIME Working officers regard him well: statements in person, chain of custody, evidence handed over unprompted. **But the apparatus is not only its officers**: prosecutors and a criminal court hold an open death investigation, Lex-Corp's counsel is pushing a wrongful-death theory into the same system, and ARGUS holds him as a cultivated asset.

SESSION 17 **holds at +0.5** The apparatus does not know what he said about the lab. If it learns, this axis moves.

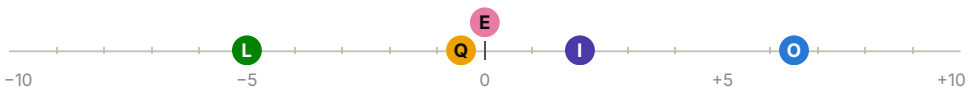

5 Lock-Step −6.0

ALL-TIME Habitual breaking and entering, a restrained prisoner humiliated in front of witnesses, and an assault on a minor teammate. **Every one of those is a chargeable offence rather than a bad look.** Session 15 added released juveniles broadcast by face, and out of the apparatus's sight a solicited burglary and killing. Session 16 added one of those juveniles, knocked out and left in handcuffs in a crime syndicate's warehouse.

SESSION 17 **holds at −6.0** This axis moves when someone finds her, or the errand reports back.

9.4 Reputation — Other Non-Superheroic Institutions

Same boundary as 8.4 — corporations, research bodies, civil courts, licensing and revenue systems, schools, and city government.

1 Oracle +6.5

ALL-TIME Institutions are built to approve of people like him. STAR Labs would regard him as a success story worth publicising, and no corporation, civil court or school has a reason to think about him twice.

SESSION 17 **holds at +6.5** Nothing changed.

2 Intrepid +2.0

ALL-TIME Unknown, compliant, and carrying no negatives.

SESSION 17 **holds at +2.0** Nothing changed.

3 Edge 0.0

ALL-TIME The one institution with a file on him is a school, and the file says his grades were "*already bad*."

SESSION 17 **holds at 0.0** Nothing changed.

4 Quasar-Force −0.5

ALL-TIME Against him: a corporate legal department with a cease-and-desist and a wrongful-death threat. For him: STAR Labs, in its own right, and a board-level CFO who gave him a morning. **The institutions that like him are the ones with no power over him.**

SESSION 17 **holds at −0.5** VOLATILE He expects the people he helped send to kill everyone in a STAR Labs facility, and his father works for STAR Labs. If that becomes known to the institution, this is the axis it lands on.

5 Lock-Step −5.0

ALL-TIME A truancy record he is actively extending, and conduct that does not stay inside the criminal file it starts in. Session 15 gave a school, a corporation and a platform each their own reason to act.

SESSION 17 **holds at −5.0** Nothing changed.

9.5 Reputation — Broad Superhero Community

1 Oracle +8.0

ALL-TIME He reports honestly, defers to Nightwing, refuses unethical requests from teammates, and prioritises healing over glory — exactly the profile senior heroes want to see in a teen team and recommend to each other.

SESSION 17 **holds at +8.0** RETCON The last edition credited the team with briefing Wonder Woman the afternoon of the warehouse; it did not happen. Nothing reached the community.

2 Quasar-Force +7.5

ALL-TIME Wonder Woman pointed at him when asked who the smartest person in the Justice League was; he shares intelligence proactively; a serving Green Lantern took a personal interest; a founding member judged him worth protecting personally. OOC Against it: the fatality, and Apokoliptian-modified hardware in his skull.

SESSION 17 **holds at +7.5** Nothing changed.

3 Edge +5.5

ALL-TIME **Vouched for before he arrived.** Black Canary volunteered to train him, the Birds of Prey took his call for help, and Nightwing, operating as Batman, recruited him personally. The rest of the community has not met him.

SESSION 17 **+5.0 → +5.5 (+0.5)** FLAG CLOSED The roster now names his second mentor: Barbara Gordon, the Oracle who found him and called in the Birds. **Two senior figures with formal mentor roles, and a third who recruited him**, is more standing in this community than two of his teammates have after seventeen sessions.

4 Intrepid +1.0

ALL-TIME Nobody has an opinion, and nothing negative exists to form one from.

SESSION 17 **holds at +1.0** Nothing changed.

5 Lock-Step −3.5

ALL-TIME The magical community is split three ways on him, with the hostile vote held by Doctor Fate, and the conventional community would object to nearly everything he does if it knew. **The first cape-adjacent order to rate him highly is one nobody else has heard of.** And the first thing the community's newest connection to this team heard from him, in Session 16, was that "*all the adults are trash.*"

SESSION 17 **holds at −3.5** The second thing the newcomer heard from him was the errand's doctrine. Black Canary's student, and now Barbara Gordon's, has two things to report. Holds until someone reports them.

9.6 Reputation — Broad Supervillain Community

1 Quasar-Force +6.5

ALL-TIME **Villains like him, and it is measurable.** Shadow-Boxer respects this team because they keep their word, Cassidy Yanks volunteered her real name, and World Ender's facade collapsed under sincerity. Uncooperative professionals read him as a child to be played, and he is the one who accidentally killed a man.

SESSION 17 **holds at +6.5** Nothing changed.

2 Lock-Step +5.0

ALL-TIME The surrender ritual is a genuine kindness in a business without much of it, and villains have cuffed themselves rather than fight him. Against it, he humiliates the ones who refuse. **Since Session 15 the underworld also knows he is a client.**

SESSION 17 **holds at +5.0** Nothing changed.

3 Oracle +3.5

ALL-TIME He heals people who were trying to kill him minutes earlier. That gets around a jail block fast.

SESSION 17 **holds at +3.5** Nothing changed.

4 Intrepid +1.5

ALL-TIME Feared and respected as a physical fact, with no personal animus in either direction.

SESSION 17 **holds at +1.5** Nothing changed.

5 Edge +0.5

ALL-TIME Barely an opinion yet, and an exasperated one: "*They keep coming back up like Daisys!*"

SESSION 17 **holds at +0.5** Nothing changed.

9.7 Reputation — Iron-Side

Inferred from a professional educator's frame: methodical, disciplined, non-authoritarian, deliberately not appointing a leader, reporting to Nightwing daily, taking notes, with significant medical training, and willing to correct a student physically. ***Iron-Side does not appear in Session 17.***

1 Quasar-Force +8.5

ALL-TIME The ideal student from her position, and he has gone out of his way to signal it: he thanked her for teaching them, fell straight into her structured wake and bedtimes, and defended her hazard pay to Lock-Step's face. In Session 14 she took a knife out of him herself.

SESSION 17 **holds at +8.5** Nothing changed. "*They're still good people*," he said of the adults.

2 Oracle +6.5

ALL-TIME Compliant, structured and cooperative, and content to follow whatever education Nightwing prefers. Undemanding, reliable and easy to teach.

SESSION 17 **holds at +6.5** She has not heard what he now thinks of "*most of the people telling us what to do.*"

3 Intrepid +3.5

ALL-TIME First up every morning, no friction, no complaints, and no engagement either. A perfectly fine student who leaves no impression.

SESSION 17 **holds at +3.5** Nothing changed.

4 Edge +1.0

ALL-TIME Not yet met in the log. The file she will open has a School obligation and grades that were "*already bad*"; the student she will meet asked for a plan and a briefing before his first fight.

SESSION 17 **holds at +1.0** The student she will meet also asked his team for three hours of practice and was turned down. Holds.

5 Lock-Step −6.5

ALL-TIME He argued with her at their first meeting, called her school fake to her face, accused her of doing it only for the money, and shows up last or not at all. Her calm reply — "*I am taking notes*" — remains the most quietly ominous line in the campaign. In Session 15 he asked her a question and followed the answer; in Session 16 the first thing he told the newcomer about her was the old grievance.

SESSION 17 **holds at −6.5** Nothing changed.

9.8 Reputation — Nightwing

SESSION 17 NOTE ***Nightwing is off screen for a fourth consecutive session.*** RETCON *No report reached him or anyone else from the end of Session 16, and none was possible from the pocket dimension. In Session 17 the team discussed him twice. Oracle asked the newcomer what kind of briefing Nightwing had given him — "So now you know the kind of stuff we got to put up with" — and Lock-Step reported it as "you'll find out." (* NOTE *Session 16's log records that Nightwing did brief Edge on all five villains.)* ***Scores are carried on earlier evidence plus what Session 17 implies.***

1 Oracle +8.5

ALL-TIME Nightwing's channel into this team, formalised in Session 12. He called about the artifact knowing exactly how Lock-Step would react; Nightwing arranged him a private appointment with a STAR Labs board member and named him alongside Quasar-Force as equal to or better than the League bench. NOTE "*It's no different than Nightwing*" (Session 15) was the first critical thing anyone in Oracle's file said about his mentor.

SESSION 17 **holds at +8.5** NOTE The second and third critical things followed — the briefing remark, and "*most of the people telling us what to do don't know what they're doing.*" Nightwing has heard neither. The channel carried nothing for a fourth session. Holds.

2 Quasar-Force +7.0

ALL-TIME Historically the primary correspondent: a proactive intelligence-sharer, evidence-disciplined, and credited by name for the security upgrades. Session 15 took half a point on implication: the boy Nightwing has watched since before he had a codename endorsed bringing in the Destined and their "*full lethal fury.*"

SESSION 17 **holds at +7.0** Nightwing would read "*the destined will kill every man and woman in that lab*" beside it. He has not.

3 Edge +6.0

ALL-TIME **Chosen by Nightwing personally**, and briefed by him on the five villains before his first fight — the only Titan he is recorded as briefing in three sessions. A recruiter's confidence is not a track record.

SESSION 17 **holds at +6.0** The recruit he chose objected, on the day he joined, to a killing his new team had commissioned — the profile Nightwing would want to have chosen. Holds, because Nightwing does not know.

4 Intrepid +1.5

ALL-TIME No problems and no contribution. Invited to raise concerns at a round-table convened to hear them, he had none.

SESSION 17 **holds at +1.5** Nothing changed.

5 Lock-Step −5.0

ALL-TIME He tried to conceal a dangerous temporal artifact from Nightwing, told the room Nightwing can't be trusted, and sedated a minor teammate. The redemption path has been visible since Session 13, and Session 15 was a list of what Nightwing's professional life is organised to prevent. **In Session 16 he used Nightwing as an authority for the first time**: "*Nightwing did say we can bring them back, so knock them out.*"

SESSION 17 **holds at −5.0** He invoked the rule again, as "*the Batman stuff*," and then the exception: "*in this situation, I agree. Yeah, but you know, I think here's exceptions.*" Nightwing would read both. He has not.

9.9 Reputation — Batman

Batman is injured, unable to fight, and has time to read files. OOC *He holds the dormant mother-box shell and has probably concluded that Quasar-Force will not age. Absent in Session 17; scored on what his file would contain. Another universe's Teen Titans have a mentor who also goes by Batman; she is not scored.*

1 Oracle +7.0

ALL-TIME A clean record, honest reporting, medical support, and a predictive module that is both tactically valuable and technically auditable. Session 14 added the behaviour he values above all others: a total failure reported immediately and in full. NOTE Since Session 15 his module resonates with a teenager's time-altering powers, which is the kind of sentence Batman reads twice.

SESSION 17 **holds at +7.0** The page Batman would mark: a module that reacted to an interdimensional abduction before anything else on the team did.

2 Intrepid +5.0

ALL-TIME A Secret Identity, and Batman approves. No secrets, no factions, no technology he didn't earn and no file to maintain. Boring is a compliment in this room.

SESSION 17 **holds at +5.0** Still nothing on file.

3 Edge +2.0

ALL-TIME Recruited under Batman's name by somebody else. Bruce Wayne, reading the file, would find a Monster-origin fifteen-year-old with a legend about cutting down armies and a power that slices through objects by concentration, plus Black Canary vouching for him. **Batman likes capabilities he can verify, and nobody can yet verify what the legend is.**

SESSION 17 **holds at +2.0** The file now has Barbara Gordon's name on it and an area power in it, and the legend in the roster's own words. The two cancel. Holds.

4 Quasar-Force +1.0

ALL-TIME **The most divided assessment in the campaign.** OOC Batman holds the shell and knows about the frozen ageing, so he regards Endo as one of the most dangerous unresolved variables in Blüdhaven; Endo's conduct is exactly the behaviour Batman rewards and rarely gets from teenagers. **High opinion of the boy; alarm about the situation.**

SESSION 17 **holds at +1.0** The situation half got a page he would read twice — the box cannot reach the Source in an isolated dimension. The boy half got the sentence about the lab. Batman has neither yet.

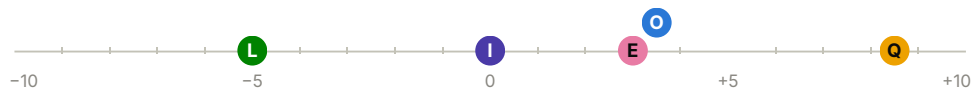

5 Lock-Step −7.5

ALL-TIME The file is thick and none of it is reassuring: chaos magic, Doctor Fate's declared hostility, concealment from Nightwing, the sedations, prisoner abuse, and a founding member of the League who felt the need to use a compulsion artifact on him. **In fairness, and Batman is fair:** he also talked a planet out of a war and asked Iron-Side for help. **The pattern under the misconduct is a teenager who does the right thing when he has time and outsources the wrong thing when he doesn't.**

SESSION 17 **holds at −7.5** Session 17 is the pattern stated by its owner: "*we can either save and protect our righteousness or actually save people's lives.*" Holds.

9.10 Reputation — Justice League

RETCON *The last edition recorded that the team went back to the tower after the warehouse and briefed Wonder Woman. It did not: the team was taken from the staging point.* ***The League took no part in Sessions 16 or 17 and has heard nothing from either.*** *Edge's mentors, Black Canary and Barbara Gordon, give the League-adjacent world a line into this team that does not run through Quasar-Force.*

1 Quasar-Force +8.5

ALL-TIME Wonder Woman, asked who the smartest person in the Justice League was, **pointed at him.** In Session 14 professional regard became institutional responsibility: personal protection, the Watchtower, the League's mother-box specialist assigned to his case. **The League has adopted his problem.** In Session 15 he was a good guest and delivered three devices.

SESSION 17 **holds at +8.5** "*I think the only one that's making time for us is Wonder Woman*," he said. Nothing changed.

2 Oracle +3.5

ALL-TIME A STAR Labs product with clean conduct, regarded positively without anyone having to think about it. Session 14 gave the League reasons to think: the failure call, the exact inventory of what was taken, and the remark that the apology counted.

SESSION 17 **holds at +3.5** Nothing changed.

3 Edge +3.0

ALL-TIME Black Canary volunteered to train him, and her opinion carries weight with the League. Nobody else there has heard of him.

SESSION 17 **holds at +3.0** His view of the League — "*That's not how Justice League works, okay?*" — is the most favourable on the team, and the League has not heard it. Holds.

4 Intrepid 0.0

ALL-TIME Very nearly unknown to them. In Session 14 he spent an extended debrief in front of a founding member saying that nothing could have been done better. Nothing malicious and nothing disqualifying, and not what you want in the file.

SESSION 17 **holds at 0.0** "*Yeah, let's go with that*," to the claim that the League is busy. Nothing changed.

5 Lock-Step −5.0

ALL-TIME If Doctor Fate has an opinion, the League will hear it, and his conduct record will not survive first contact with Superman. Session 14 happened in the League's own house: an argument with Wonder Woman, a rant, solicited souvenirs, the Lasso of Truth. Session 15 added the stream of their station. **For, and genuinely League-shaped:** a Lantern asked for the Justice League and got the Titans, and he handled it better than the League's reputation suggests it would have.

SESSION 17 **holds at −5.0** *"The Justice League wants us to save the world. If we fail. The world's over"* — the League would recognise its own job described, and not the conclusion he drew from it. Holds.

9.11 Reputation — Green Lantern Corps

THIN EVIDENCE *Still the least-supported axis in the document.* ***Session 17 adds no contact****: Guy Gardner's communicator could not reach him. Volatile throughout.*

1 Quasar-Force +7.5

ALL-TIME **A near-monopoly.** Guy Gardner sought him out, made him a sandwich with the ring, got angry on his behalf that nobody had told him what was fused to his nervous system, and offered Corps files on the mother box. In Session 15 Quasar-Force called him the moment the progenitor threat looked real and followed up by text — **the Session 13 instruction used exactly as given.** Guy's opinion of the boy is very high; the Corps has not formed one.

SESSION 17 **holds at +7.5** *"The dimension you're trying to reach is currently unavailable,"* three times. Lock-Step told him Guy had *"left you on red"*; he answered that Guy *"really cares about the creepozoids."* Holds.

2 Oracle +2.5

ALL-TIME Collective credit and nothing against him, which on this axis is worth second place. **He is the member whose conduct this organisation would like best if it ever looked.**

SESSION 17 **holds at +2.5** Nothing changed.

3 Intrepid +1.0

ALL-TIME Zero contact, zero record, and a share of the collective credit for a capture Guy rated highly.

SESSION 17 **holds at +1.0** His opinion of a different lantern order — that grey is *"the color of 'Lazy'"* — reached nobody.

4 Lock-Step +0.5

ALL-TIME More contact with a Green Lantern than anyone but Quasar-Force, and it ended well — *"no hard feelings"* — after he argued that heroes should be paid and then phoned a bank to drain the man's account. Session 15 added powers read as lantern-derived and linked to Oa, and a ring from a different order that works in time. **A Lantern was amused. A Guardian would not be.**

SESSION 17 **holds at +0.5** The first apology on his file, delivered to a man who could not hear it: *"I think he's still mad about the three dollars I took from him. I don't know, maybe it's my fault. If it is, I'm sorry."*

5 Edge 0.0

ALL-TIME No contact and no record. The Corps does not know he exists.

SESSION 17 **holds at 0.0** *"Look, you lose me when you mentioned Grey Lantern."*

§10 Aggregates And Cross-Cutting Synthesis

10.0 Why Three Scales

A single 0–10 scale cannot express liability. Intrepid's engineering is `0.5`, which is an absence. Lock-Step's standing with Iron-Side is `−6.5`, which is an active debt that is accumulating and already has consequences in motion. Flattening both to "low" loses the distinction that matters most for play.

A single −10…+10 scale cannot express absence. Scoring Intrepid's engineering at −9 would claim that his engineering *harms* the team, which is false. He simply isn't an engineer, and nobody expected him to be.

So the scale follows the axis. Capability and exposure are magnitudes (`0.0–10.0`). Psychology, standing and opinion have genuine negative poles (`−10.0…+10.0`). Threat exposure is only ever a cost (`0.0…−10.0`). **The aggregates normalise everything onto one consistent signed scale**, because a composite is useless if its components point in different directions.

Recommendation: use `−10…+10` for composites. The sign separates "contributes less than a competent peer would" from "is a net drag", and three of five PCs sit close enough to zero that an unsigned scale would hide which side they are on. A 0–10 rescale is in 10.1.6.

Conversion. Magnitude axes map as **(score − 5) × 2**, anchored so that 5.0 (the competent Rank 3 baseline) becomes 0. A negative there means "*this far below what a baseline peer would bring*," not "*actively harmful*."

NOTE ON COMPARABILITY THIS REVISION **All five members are returning, so every figure in this section is compared with Session 16 on the same five-person board.** NEW AXIS This revision adds 1.14 Heroism (bumping the previous 1.14 to 1.15), so the Session 16 figures in parentheses are **restated on 102 axes**, with 1.14 at its retroactive baseline; where a published Session 16 figure is quoted, it is labelled as published. The restatement raised every Session 16 composite: Oracle +0.043, Quasar-Force +0.011, Lock-Step +0.036, Edge +0.047 and Intrepid +0.079. Two of the comparisons carry sheet changes rather than play: Edge's rebuild and Oracle's declared advances. Section 10.1.6 separates them from the session.

10.1 Aggregate Standing — Score-Based

10.1.1 The Indices

Every index below is defined by an explicit section range. Session 16 figures are given in parentheses where the number moved by 0.05 or more.

A — Capability And Fame / Exposure (*magnitude, `0–10`; 5.0 = competent Rank 3 baseline*)

PC	Combat §4 *(22)*	Non-Combat §5 *(17)*	Robustness §6 *(6)*	All Capability §4–§7 *(52)*	Fame / Exposure §8 *(7)*
Quasar-Force	6.90	8.09	4.72 *(4.80)*	7.28	9.17
Lock-Step	6.74	5.20 *(5.13)*	5.30	6.07	6.94
Oracle	6.69 *(6.61)*	6.86	4.92 *(5.08)*	6.68	4.99
Edge	5.77 *(5.65)*	4.00 *(3.62)*	5.17 *(5.12)*	5.27 *(5.03)*	3.00
Intrepid	5.19	1.96 *(1.86)*	4.67	4.08	3.33

B — Character, Standing, And Risk (*valence `−10…+10`, except Risk `0…−10`*)

PC	Character §1 *(15)*	Team Standing §3.1–3.5 *(5)*	External Reputation §9 *(11)*	*— all three combined (31)*	Risk Load §2 *(8)*
Oracle	+7.20 *(+7.40)*	+7.60	+5.86	*+6.79 (+6.89)*	−4.94 *(−4.75)*
Quasar-Force	+5.43 *(+5.73)*	+5.70 *(+5.60)*	+4.36	*+5.10 (+5.23)*	−9.12 *(−9.06)*
Edge	+4.80 *(+4.07)*	+5.10 *(+5.20)*	+2.05	*+3.87 (+3.52)*	−5.31 *(−5.00)*
Intrepid	+3.53 *(+3.43)*	+5.20 *(+5.10)*	+2.50	*+3.44 (+3.37)*	−3.31 *(−3.25)*
Lock-Step	−2.90 *(−2.77)*	+4.40 *(+4.70)*	−1.95	*−1.39 (−1.27)*	−8.38 *(−8.25)*

The combined column is the basis used by the composite in 10.1.2 and is shown for continuity. §3.6–3.9 (Command Chair and Pecking Order) are magnitude axes and sit in Table A's Capability figure instead. Bold marks the best and the worst figure in each column.

The four veterans' indices barely moved; the newcomer's moved on every column but Fame, and on Reputation only by a mentor-tag half-point.

- **Edge.** Character +0.73 (+4.07 → +4.80), on the objection and the rule. Non-Combat +0.38, on Ego 7 and a day of organising. Combat +0.12, on the rebuild. Robustness +0.05, on the request to train; the rebuild alone was worth −0.03 there. Against: Risk −0.31, on the rebuild's thicker containment file and the arena, and Team Standing −0.10, on the healing factor he gave up.
- **Oracle.** Character −0.20, on the errand question answered by deference and "*most of the people telling us what to do don't know what they're doing.*" Combat +0.08 on the advances. Robustness −0.16, on a module that reacted to the abduction and a copy that beat him with his own kit.
- **Quasar-Force.** Character −0.30 — the largest character fall among the veterans — on the sentence about the lab, the leaks and the penalty. Team Standing +0.10 on "*you're the brains.*" Risk −0.06, to **−9.12, still the lowest on the board.**
- **Lock-Step.** Team Standing −0.30, on the door and the formation. Character −0.13 and Risk −0.13, on the doctrine.
- **Intrepid.** Character +0.10 and Non-Combat +0.10, on the first session in which his calls carried.

Edge's profile is still the flattest on the board (SD 4.79), and it now touches both ends of the scale. He is third on the combined character-standing-reputation figure (+3.87), now more than four tenths clear of Intrepid. He is fourth on Combat (5.77) and second on Robustness (5.17), and his Fame index of 3.00 is still the lowest on the board, which for a member of this team is good news.

10.1.2 Composite Net Score

*The **95 non-neutral axes** normalised to `−10…+10`. Fame is excluded, matching the polarity classification in 10.2.1; a fame-inclusive version is in 10.1.6. Composites are shown to three decimals.*

PC	Composite	Median	SD	Range	Read
Oracle	**+3.895** *(+3.932)*	+5.6	5.00 *(4.97)*	−9.0 → **+10.0**	Down four hundredths; the lead holds to within half a hundredth
Quasar-Force	**+3.463** *(+3.504)*	**+5.6**	**5.78** *(5.74)*	**−10.0** → +9.6	Down four hundredths; the median is level with Oracle's
Edge	**+0.980** *(+0.613)*	+1.5 *(+2.0)*	4.79 *(4.72)*	**−10.0** → +9.0	The only real mover, and 86% of it is play
Lock-Step	**+0.061** *(+0.104)*	0.0	5.71	**−10.0** → +9.6	Down four hundredths, toward zero
Intrepid	**−0.379** *(−0.452)*	+1.0	5.10 *(5.13)*	−9.0 → +9.2	The largest gain among the veterans

Oracle leads by 0.432, against 0.427 restated. The published history runs 0.77, 0.81, 0.77, 0.72, 0.36 and 0.39; Heroism adds between three and four hundredths to it, because Oracle is first on the new axis and Quasar-Force fourth. **On like-for-like axes the lead moved by four thousandths.** Both men fell by about four hundredths for unrelated reasons:

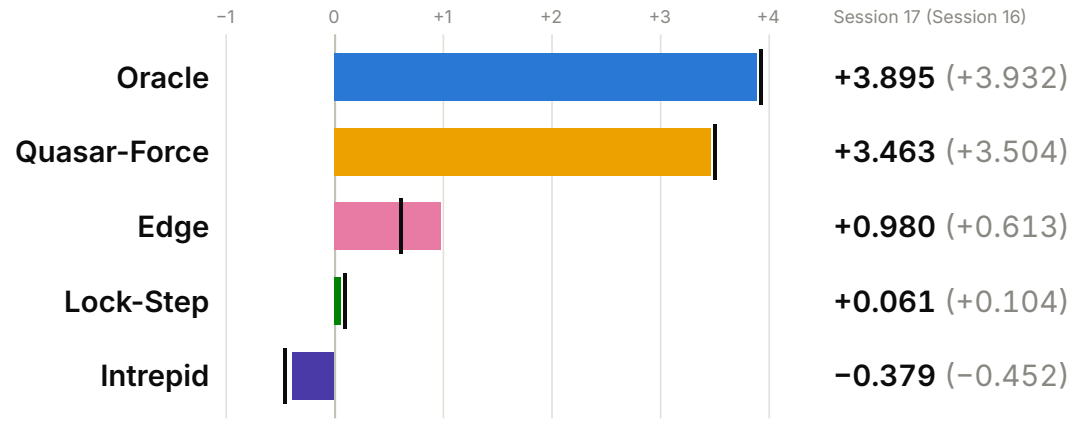

- **Oracle** gained on his advances (+0.027) and lost more on play (−0.064): the errand question answered by deference (which also cost him half a point of Heroism), a burnout entry, a copy that beat him, and a module that reacted to the abduction.
- **Quasar-Force** lost on play alone (−0.041): the sentence about the lab (a full point of it on Heroism), the leaks, the penalty and the box.

Edge rises 0.367, to +0.980 — the only composite on the board to move by more than a tenth. Of the rise, +0.315 is play, +0.032 the rebuild and +0.021 the mentor tag (10.1.6). **The rebuild was close to neutral on the composite**: it bought more than it cost in combat and potency, and paid it back in support burden, healing, stamina and risk. His range now touches −10.0 (Healing, at 0.0), and his median fell to +1.5 even as his mean rose, which is what a profile looks like when it acquires both extremes.

Lock-Step falls 0.043, to +0.061. Eighteen of his axes moved, four for the better and fourteen for the worse. He is still above zero, by six hundredths.

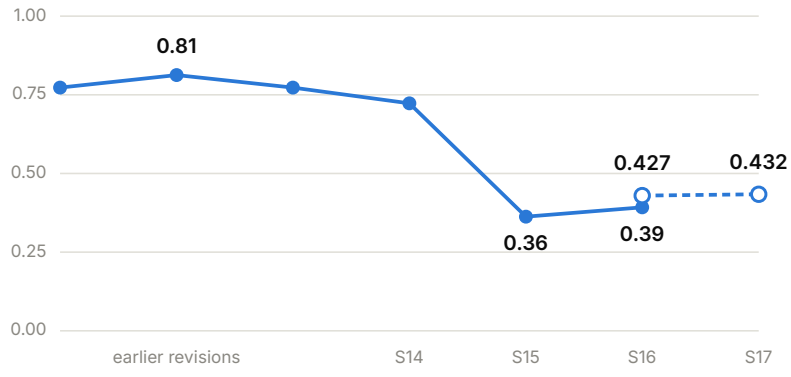

Intrepid rises 0.073, to −0.379, the largest gain among the veterans: eleven of his thirteen movements went up, almost all of them on the first session in which his calls carried.

Composite net score, 95 axes

Session 17 composite on the −10…+10 scale, 95 non-fame axes; black ticks mark Session 16, restated on the same 102 axes with Heroism at its retroactive baseline (§10.1.2).

Oracle's composite lead over Quasar-Force

Filled markers: Oracle's composite lead over Quasar-Force as published in each revision of this document. Hollow markers, dashed: the same lead on 102 axes with Heroism — Session 16 restated (0.427) and Session 17 (0.432).

10.1.3 Section Means on the Composite Scale

Section	n	Oracle	Quasar-Force	Lock-Step	Intrepid	Edge
1 — Psychology & Discipline	15	**+7.20** *(+7.40)*	+5.43 *(+5.73)*	**−2.90** *(−2.77)*	+3.53 *(+3.43)*	+4.80 *(+4.07)*
2 — Enemy Risk	8	−4.94 *(−4.75)*	**−9.12** *(−9.06)*	−8.38 *(−8.25)*	**−3.31** *(−3.25)*	−5.31 *(−5.00)*
3 — Team Internals	9	**+6.98**	+3.99 *(+3.71)*	+2.96 *(+3.17)*	**+0.67** *(+0.39)*	+1.50 *(+1.33)*
4 — Combat	22	+3.38 *(+3.23)*	**+3.79**	+3.48 *(+3.53)*	**+0.37**	+1.55 *(+1.30)*
5 — Non-Combat	17	+3.72	**+6.19** *(+6.18)*	+0.40 *(+0.26)*	**−6.08** *(−6.28)*	−2.00 *(−2.75)*
6 — Robustness	6	−0.17 *(+0.17)*	−0.57 *(−0.40)*	**+0.60**	**−0.67**	+0.33 *(+0.23)*
7 — Overall	7	+5.37 *(+5.43)*	**+7.34** *(+7.43)*	+3.46 *(+3.54)*	**+0.46**	+3.66 *(+2.86)*
8 — Fame	7	−0.03	**+8.34**	+3.89	−3.34	**−4.00**
9 — Reputation	11	**+5.86**	+4.36	**−1.95**	+2.50	+2.05 *(+2.00)*

The three largest section movements on the board are all Edge's: Overall +0.80 (+2.86 → +3.66), Non-Combat +0.75 and Psychology +0.73. **His Overall mean now passes Lock-Step's** (+3.66 against +3.46), on the rebuild's potency and the session's value.

Among the veterans the largest movement is Oracle's Robustness, +0.17 → −0.17, which takes his robustness mean below zero. Behind it come Quasar-Force's Psychology (−0.30) and Quasar-Force's and Intrepid's Team Internals (+0.28 each). Nothing else among the four moved by a quarter of a point.

Robustness held its spread at 1.27 end to end. Lock-Step still leads it and Intrepid still trails it. Oracle and Quasar-Force both fell, and **three of the five members now have a negative robustness mean.**

Quasar-Force improves on two sections and falls on four, and his Enemy Risk mean (−9.12) is still the lowest section figure on the board.

10.1.4 Gaps and Photo Finishes

Widest 1st-to-2nd gaps — genuine monopolies (*fame excluded; parentheses are the Session 16 gaps*):

Axis	Leader	Gap
4.15 Healing	Oracle	**7.0** *(7.0)*
5.2 Engineering	Quasar-Force	5.3 *(5.3)*
3.6 Command Chair — External Appointment	Oracle	5.0 *(5.0)*
9.10 Justice League	Quasar-Force	5.0 *(5.0)*
9.11 Green Lantern Corps	Quasar-Force	5.0 *(5.0)*
5.3 Cyber & Information Warfare	Quasar-Force	4.8 *(4.8)*
1.1 Psychological Stability	Oracle	4.5 *(4.5)*
9.4 Other Institutions	Oracle	4.5 *(4.5)*
5.10 Social Engineering	Lock-Step	3.5 *(4.0)*
6.5 Power Failure Mode	Oracle	3.5 *(3.5)*
9.3 Law-Enforcement Reputation	Oracle	3.5 *(3.5)*

Healing is still the widest gap in the document, and Session 17 put two members on the wrong side of it who used to be able to get themselves up.

Two of last revision's monopolies broke, both on the newcomer. Area Damage collapsed from 6.6 to 1.1 when the rebuild gave him Supernova, and it leaves the list entirely; for three revisions it was the second-widest gap in the document. **JL Vetting — Character** closed from 4.5 to 2.5 when he passed Quasar-Force on the objection. Social Engineering narrowed from 4.0 to 3.5 on his Ego 7.

Tightest 1st-to-2nd — coin flips:

- **Two ties at the top, both new:**
  - **1.3 Burnout:** Oracle and Quasar-Force at +6.0, broken on structure.
  - **6.3 Power Independence:** Intrepid and Edge at 8.5, broken on record.
- **At 0.1:**
  - **5.1 Leadership:** Quasar-Force over Oracle, for a third revision.
  - **5.4 Field Investigation:** Quasar-Force over Lock-Step, closed from 0.3 on the loudspeaker interrogation.
- **At 0.2:**
  - Mental Durability, Combat Synergy, Stealth, Growth and Overall Value, all unchanged.
  - Three new ones: **Ranged** (Edge over Oracle, narrowed from 0.4 by the advances), **Empathic Support** (Quasar-Force over Oracle, narrowed from 0.4 when the box withdrew) and **Overall Combat Power** (Intrepid over Edge, narrowed from 0.4 by the rebuild).
- **At 0.3: Single-Target Damage**, where Edge took first from Intrepid, and Combat Value.

Narrowest full spreads are all aggregates, as always: Overall Combat Power (**0.9**, down from 1.1), Overall Combat Value (1.0), Overall Value (2.4) and Overall Power (2.7). Treat all four as clusters.

Widest full spreads, and Lock-Step is the low end of all ten:

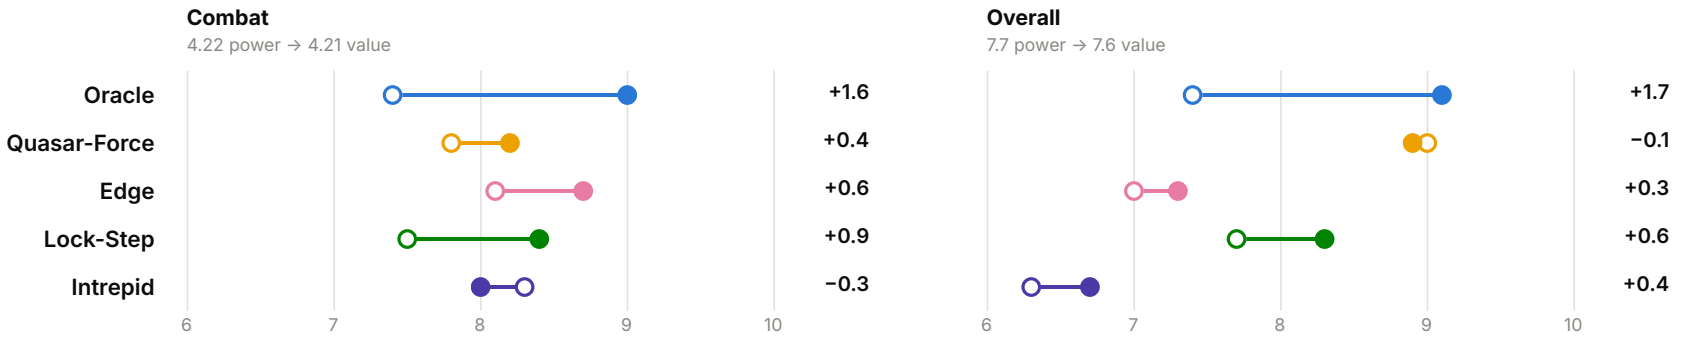

- **JL Vetting — Character: 17.0.** Oracle `+8.0` against Lock-Step `−9.0`; both ends moved half a point down, and it is still the widest spread in the document's history.
- **Discipline Outside Combat: 15.0** and **Iron-Side: 15.0.**
- **Batman: 14.5.**
- **Emotional Regulation: 14.0.**
- **Nightwing: 13.5** and **Justice League: 13.5.**
- **Safety Net: 13.0.**
- **Trauma Resilience and Line-Holding: 12.5 each** (13.0 *each*), both narrowed at the top: Quasar-Force's box and Oracle's silence.

Character is still where this team's real variance lives. Session 17 narrowed it from the top rather than the bottom: the two highest-scoring characters on the team both fell on the session's moral question.

10.1.5 Value vs Power — the Central Inversion

	Combat Power	Combat Value	Overall Power	Overall Value
Oracle	5th 7.4	**1st** 9.0	3rd 7.4	**1st** 9.1
Quasar-Force	3rd 7.8	4th 8.2	**1st** 9.0	2nd 8.9
Lock-Step	4th 7.5	3rd 8.4	2nd 7.7	3rd 8.3
Edge	2nd 8.1	2nd 8.7	4th 7.0	4th 7.3
Intrepid	**1st** 8.3	5th 8.0	5th 6.3	5th 6.7

Value against power

Hollow marker: the power axis (4.22, 7.7). Filled marker: the value axis (4.21, 7.6). The figure at right is value minus power.

Oracle gains 1.6 points moving from combat power to combat value, and 1.7 moving from overall power to overall value, down from 1.8 each: the advances raised his power and nothing raised his value. **The team's most valuable member is still its least powerful in combat**, by a tenth now rather than three.

Edge is still second on both combat columns and fourth on both overall columns, and the rebuild closed his combat-power gap to Intrepid to two tenths. **Intrepid is first on combat power and last on everything else**, as he has been for two revisions. Lock-Step gains in both columns moving from power to value, which is still what an all-rounder's profile looks like.

10.1.6 Sensitivity

Including the seven fame axes keeps the flip for a third revision. Across 102 axes, with exposure treated as favourable, the composites read:

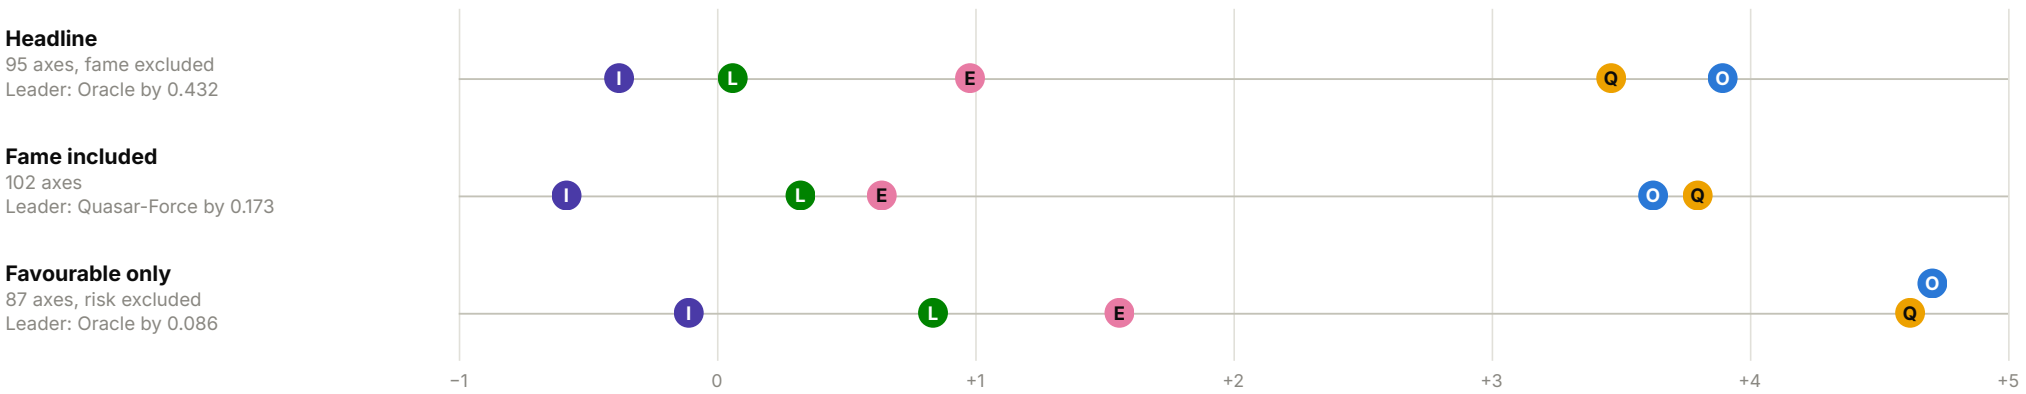

- **Quasar-Force +3.798**
- **Oracle +3.625**
- Edge +0.638
- Lock-Step +0.324
- Intrepid −0.582

Quasar-Force leads by 0.173, against 0.176 restated (0.21 published). Fame is worth +0.33 to Quasar-Force, +0.26 to Lock-Step, −0.20 to Intrepid, −0.27 to Oracle and −0.34 to Edge. **Unlike last revision, that is no longer enough to drop the newcomer below Lock-Step**: he is third on this treatment too.

Rescaling to 0–10 via `(x+10)/2` on the fame-inclusive composite preserves the order: Quasar-Force **6.90**, Oracle **6.81**, Edge **5.32**, Lock-Step **5.16**, Intrepid **4.71**.

Excluding the risk section as well — the 87 favourable axes only — Oracle stays in front: +4.707 to +4.621. His lead on this treatment widens from 0.070 to 0.086. **Edge is third (+1.559)**, now 0.72 clear of Lock-Step (+0.837).

The composite under three treatments

Each row recomputes the composite on a different set of axes (10.1.2, 10.1.6). Members within a dot's width of each other are stacked.

Section-weighted treatment gives each section equal weight instead of each axis. Over the eight non-fame sections Oracle leads +3.43 to +2.68, with Edge third at +0.82. With fame included Quasar-Force leads +3.31 to +3.04. **The weighting scheme still decides the answer.**

Sheet sensitivity. Two sheets changed, and the movements are tagged (play, RE-SPEC, ADVANCE, and the roster's mentor-tag clarification):

- **Edge's rebuild** moved 31 placements and was worth **+0.032** on the composite. The mentor tag moved three more, worth +0.021. **Play moved 28 placements and was worth +0.315.** Revert the rebuild and the tag and Edge is +0.927; revert the play and he is +0.665. **The newcomer's rise is what he did and said in Session 17, not what he bought.**
- **Oracle's advances** moved five placements and were worth **+0.027**; his play was worth −0.064. Without the advances he would be +3.867, and his lead 0.404.

Fight sensitivity. Revert all twenty-two combat axes to their Session 16 values and the composites read Oracle +3.859, Quasar-Force +3.463, Lock-Step +0.072, Edge +0.923 and Intrepid −0.379. The combat axes were worth +0.057 to Edge (all of it the rebuild) and +0.036 to Oracle, of which +0.025 is the advances and +0.011 a de-escalation call. They were worth −0.011 to Lock-Step and exactly nothing to Quasar-Force or Intrepid. **The bout itself moved no score; a one-turn fight is not evidence of much.**

One-session sensitivity. Session 17 moved **130 placements on the five-person board**, four of them on the new Heroism axis:

- **Oracle** 18 (6 better, 12 worse; five of the six are his advances), net **−0.037**.
- **Quasar-Force** 19 (7 better, 12 worse), net **−0.041**.
- **Lock-Step** 18 (4 better, 14 worse), net **−0.043**.
- **Edge** 62 (40 better, 22 worse; 31 re-spec, 3 roster), net **+0.367**.
- **Intrepid** 13 (11 better, 2 worse), net **+0.073**.

All three senior members fell, and by almost the same amount. The session that put a moral question to the room moved its three senior members down on character, each in his own way, and moved the two juniors up.

10.2 Aggregate Standing — Position-Based

Five-person board: positions run 1–5. Session 16 figures in parentheses.

10.2.1 Axis Polarity Classification

Class	First place means	Axes	Which
Favorable	Best — more of a desirable quality	**87**	§1 (15), §3 (9), §4 (22), §5 (17), §6 (6), §7 (7), §9 (11)
Risk	Worst — most exposed to a threat	**8**	§2.1–2.8
Neutral / double-edged	Most exposure; benefit is context-dependent	**7**	§8.1–8.7 (Fame)
Total		**102**	

10.2.2 Favorable Axes (87) — *lower average is better*

PC	1sts	5ths	Average
Oracle	**38** *(38)*	6 *(5)*	**2.10** *(2.09)*
Quasar-Force	27 *(27)*	6 *(7)*	2.32 *(2.34)*
Edge	2 *(1)*	11 *(12)*	3.37 *(3.48)*
Lock-Step	13 *(13)*	29 *(29)*	3.41 *(3.32)*
Intrepid	7 *(8)*	**35** *(34)*	3.79 *(3.76)*

Edge passes Lock-Step on the favourable average, 3.37 against 3.41, and takes his second first place: Single-Target Damage, from Intrepid. Oracle picked up a last place (Area Damage, where Edge's rebuild put him above), and Quasar-Force lost one (Healing, where Edge now sits below him). **Lock-Step's average fell nine hundredths**: eight of his placements are lower and none is higher, on the door, the doctrine and the newcomer passing him.

10.2.3 Risk Axes (8) — *higher average is better*

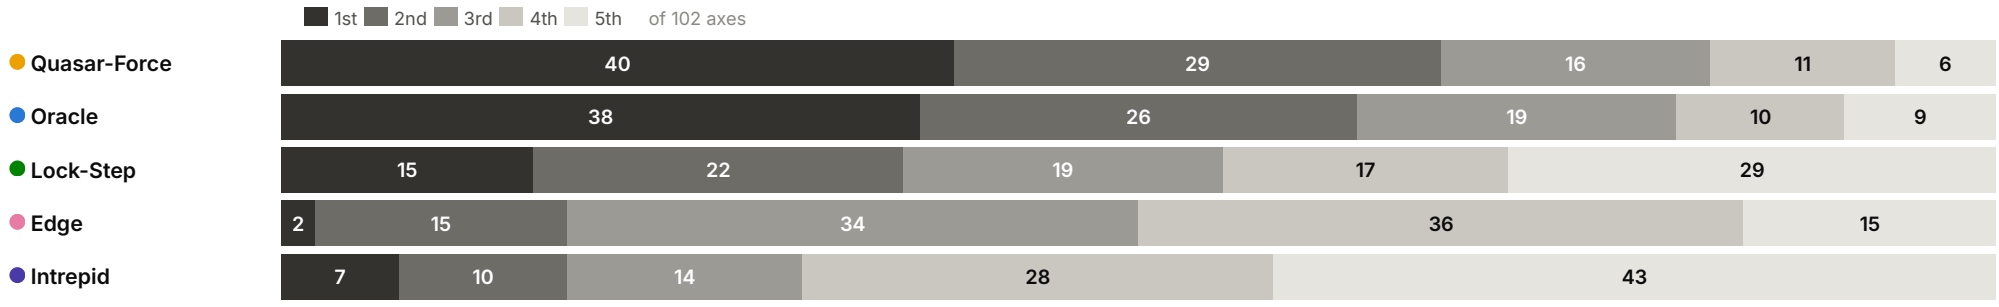

PC	1sts *(most at risk)*	5ths *(least)*	Average
Intrepid	0	**6**	**4.62**
Oracle	0	2	3.50
Edge	0	0	3.50
Lock-Step	2	0	2.00
Quasar-Force	**6**	0	**1.38**

No risk position changed, for the third time in four revisions. Twelve risk scores moved, every one of them toward more exposure, and no order changed. **Quasar-Force and Lock-Step hold every first place on the risk board between them for a fourth revision.**

10.2.4 All 102 Axes — Raw Position

PC	1sts	5ths	Average	1	2	3	4	5	SD
Quasar-Force	**40**	6	**2.16**	40	29	16	11	6	1.22
Oracle	38	9	2.27	38	26	19	10	9	1.29
Lock-Step	15	29	3.23	15	22	19	17	29	1.43
Edge	2	15	3.46	2	15	34	36	15	**0.98**
Intrepid	7	**43**	3.88	7	10	14	28	43	1.25

Raw position, all 102 axes

Five-person board (10.2.4). On the §2 risk axes first place means most exposed, and on the §8 fame axes most known.

Session 16 distributions, restated on 102 axes: Quasar-Force 40 / 28 / 17 / 10 / 7, average 2.18; Oracle 38 / 27 / 17 / 12 / 8, average 2.26; Lock-Step 15 / 25 / 21 / 12 / 29, average 3.15; Edge 1 / 15 / 28 / 42 / 16, average 3.56; Intrepid 8 / 7 / 19 / 26 / 42, average 3.85.

Quasar-Force places top-two on 69 of 102 axes, one more than last revision. **Lock-Step lost three second places** — Command Chair overall, Reaction and Area Damage — and five of his thirds became fourths, the clearest position-based trace of the session. **Edge's distribution is still the tightest on the board (SD 0.98)**: two firsts, fifteen lasts, and 85 placements in the middle three. **Intrepid is last on 43 of 102**; six are risk axes, and good news.

10.2.5 Placement Tally (95 non-neutral axes)

PC	Good 1sts	Good 5ths	Bad 1sts	Bad 5ths	Net
Oracle	38	6	0	2	**+34** *(+35)*
Quasar-Force	27	6	6	0	**+15** *(+14)*
Edge	2	11	0	0	**−9** *(−11)*
Lock-Step	13	29	2	0	**−18** *(−18)*
Intrepid	7	35	0	6	**−22** *(−20)*

Every first-or-last change on the board involves the newcomer. He took Single-Target from Intrepid and left last place on Area Damage to Oracle and on Law to Intrepid. He also took last on Healing from Quasar-Force. On this measure Oracle is nineteen clear of second.

10.2.6 Polarity-Adjusted Position Composite

The same 95 non-neutral axes as 10.1.2, risk inverted. 5 = best placement.

PC	Mean	Median	SD
Oracle	**3.86** *(3.87)*	4.0	1.24
Quasar-Force	3.48 *(3.46)*	4.0	1.35
Edge	2.71 *(2.60)*	3.0	**0.98**
Lock-Step	2.54 *(2.62)*	2.0 *(3.0)*	1.41
Intrepid	2.41 *(2.44)*	2.0	1.43

Oracle leads by 0.38, down from 0.41: Quasar-Force's positions rose slightly while his score fell: Edge's rebuild dropped the newcomer below him on four combat and robustness axes but lifted him above on three others, and Quasar-Force's own rise to second on three team-internals axes outweighed the two psychology places he lost to Intrepid and Edge. **Third place on this measure is now Edge's, by seventeen hundredths** — the reverse of last revision, when Lock-Step held it by two on the restated figures (by four as published).

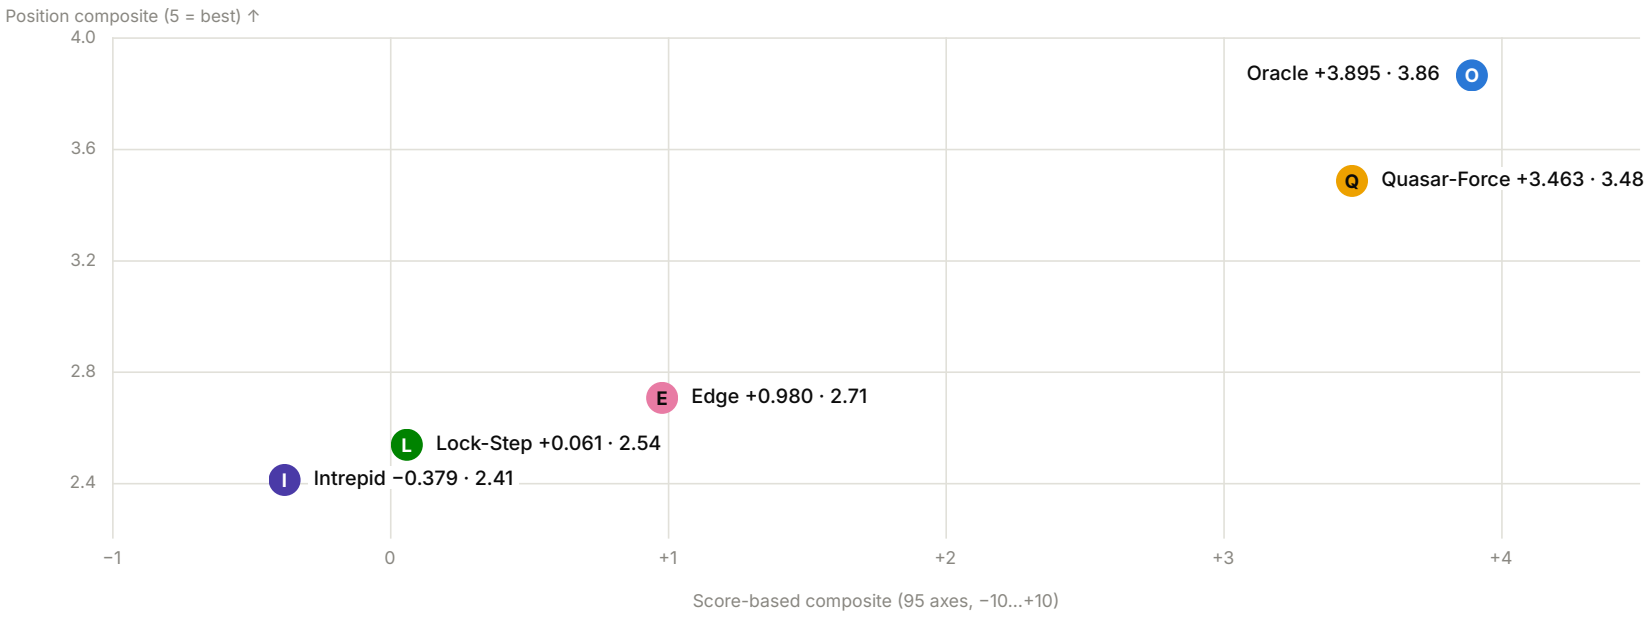

10.2.7 Method Comparison

Both composites run on the same axes. Matched:

	Score-based	Position-based	Agree?
Excluding fame (95)	**Oracle** +3.895, Quasar-Force +3.463 *(0.43)*	**Oracle** 3.86, Quasar-Force 3.48 *(0.38)*	**Yes**
Including fame (102)	**Quasar-Force** +3.798, Oracle +3.625 *(0.17)*	**Oracle** 3.80, Quasar-Force 3.59 *(0.22)*	**No — third consecutive revision**
Third place (95)	**Edge** +0.980, Lock-Step +0.061 *(0.92)*	**Edge** 2.71, Lock-Step 2.54 *(0.17)*	**Yes — first time**
Third place (102)	**Edge** +0.638, Lock-Step +0.324	**Level:** Lock-Step 2.618, Edge 2.618	**Not quite — a dead tie**
Raw first-place count (102)	—	**Quasar-Force** 40, Oracle 38	**No — fourth consecutive revision**

Last revision's closing note set the test for third place: "*If Edge's score-based third survives a session with deep negatives in it, the methods will agree on him; if it does not, the position composite was right.*" Session 17 gave him his first deep negative — Healing at 0.0, a −10.0 on the composite scale — and **his third survived it, and the methods now agree.** The one treatment on which they do not quite agree is the one that counts his fame, and there the position composite has him exactly level with Lock-Step, at 267 position points each over 102 axes. Without Heroism it would put Lock-Step ahead by two hundredths: the new axis, where Edge is third and Lock-Step last, is what closed it.

Score-based against position-based composite

Both measures use the 95 non-neutral axes (10.1.2, 10.2.6). The score composite and the position composite agree on the order of all five members this revision.

The re-examination, updated. The composite splits into its native parts:

Component	Axes	Oracle	Quasar-Force	Leader
Capability (magnitude, §3.6–§7)	56	+3.55	**+4.36**	Quasar-Force by 0.80 *(0.81)*
Character, standing & reputation (valence)	31	**+6.79**	+5.10	Oracle by 1.69 *(1.66)*
All favourable axes (the two above)	**87**	**+4.707**	+4.621	**Oracle by 0.086** *(0.070)*
Risk (§2)	8	**−4.94**	−9.12	Oracle by 4.19 *(4.31)*

On what they bring, Oracle's lead grew by a hundredth and a half: the advances raised his capability as much as play lowered his character, and Quasar-Force's character fell further. **On what threatens them, the gap narrowed for the first time**, because Oracle took three risk half-points and Quasar-Force one. **0.353 of Oracle's 0.432 composite lead is still the risk section, and 0.079 is everything else**, against 0.363 and 0.064 last revision restated. Heroism more than doubles the "everything else" share; without it, the figure would be 0.037. Closing the lead through risk alone would now need Quasar-Force's risk mean to improve from −9.12 to about −4.0.

The finding stands as relabelled two revisions ago: "Oracle first" on the headline composite means "Oracle safer" far more than "Oracle better." Session 17 made him slightly more "better" and slightly less "safer," and the total did not move.

Why fame stays excluded, now that it decides the answer. Exposure has no fixed sign: it opens doors and it paints targets. Session 16 supplied the clearest case — the brood ganged up on Quasar-Force first because of his fame. Session 17 supplied a stranger one. The hosts set a power copier against the team's planner and filmed the whole thing for an audience in another universe, and that exposure appears on none of this document's fame axes. **The only treatment that puts Quasar-Force first is still the one that scores a spotlight as an asset.**

10.3 The Sweeps

*Where each character's first and last places actually cluster. Position convention follows each section: on §2 first place means **most** at risk.*

PC	Firsts	Where they are	5ths	Where they are
Quasar-Force	**40**	§5:11, §8:7, §2:6, §4:5, §7:4, §9:4, §1:2, §6:1	6	§6:2, §9:2, §3:1, §4:1
Oracle	38	§1:12, §4:7, §3:6, §9:6, §5:4, §7:2, §6:1	9	§4:5, §2:2, §6:1, §8:1
Lock-Step	15	§4:4, §6:3, §2:2, §3:2, §5:2, §7:1, §9:1	29	§1:14, §9:7, §3:3, §4:2, §7:2, §6:1
Edge	2	§4:2	15	§4:4, §5:4, §8:4, §9:2, §3:1
Intrepid	7	§4:4, §1:1, §3:1, §6:1	**43**	§5:13, §4:10, §2:6, §7:5, §3:4, §6:2, §8:2, §1:1

Oracle sweeps character, for a seventh revision. He holds twelve of the fifteen psychology axes, six of nine team internals and six of eleven reputation axes: **24 of the 35 axes that measure who a person is rather than what they can do**, the new one included. Six of the twelve psychology firsts fell by half a point this revision — Burnout, Combat Discipline, Moral Agency, Line-Holding, JL Vetting and Heroism — and he kept all six. His combat last places rose from four to five, because the newcomer's rebuild put him above Oracle on Area Damage. **He is still the best person on this team and the worst at hurting anybody.**

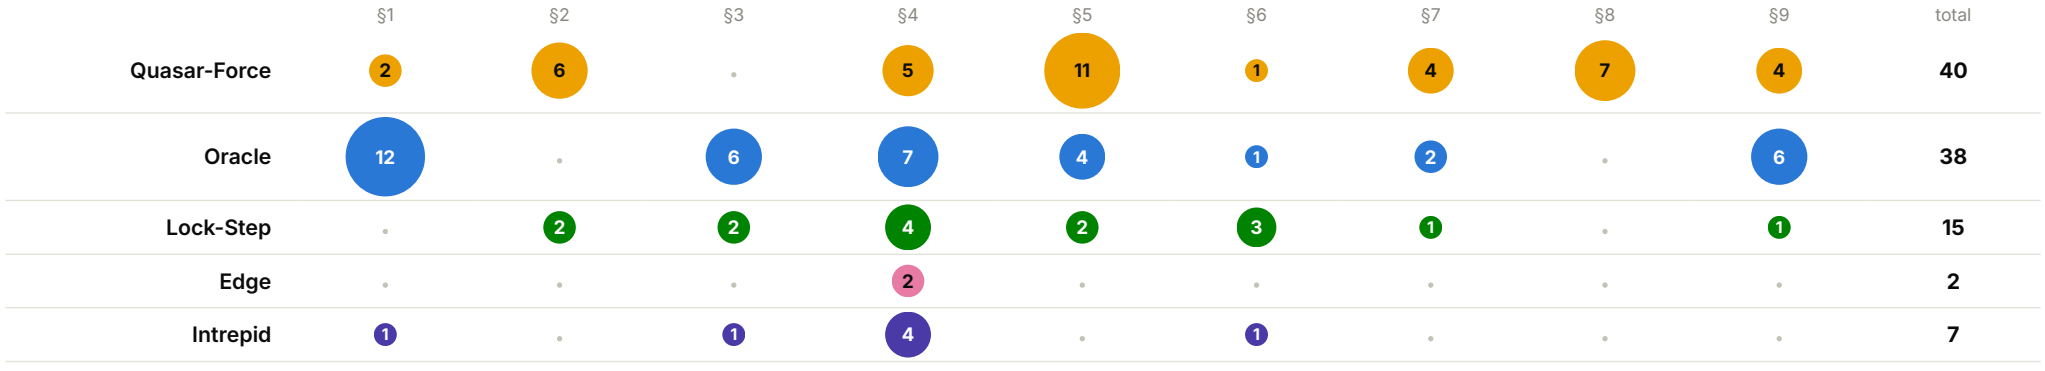

Quasar-Force sweeps capability, exposure and most of the danger, and lost one last place. He has forty firsts — eleven of the seventeen non-combat axes, all seven fame axes, five combat axes, four of seven overall axes and six of eight risk axes. He now has six last places: Physical Durability, Power Independence, Solo Operation, Support Burden, and the two public reputations. Healing left his list when Edge's rebuild took him to zero beneath him. **Four of the six are still one fact — a sixty-Health fourteen-year-old carrying an irreplaceable object with no way to heal — and Session 17 found that the object has a dependency of its own.**

Lock-Step is the mirror image, and Session 17 moved its middle, not its edges. His fifteen firsts are the same list as last revision, and his twenty-nine lasts are last revision's twenty-eight plus Heroism. **All fourteen psychology last places are unchanged on the restated board** — on Heroism he is last while still above zero, the only psychology axis on which that is true — and the only psychology axis he is not last on is still Moral Agency, where the newcomer has now passed him. What moved was the middle: three second places lost (Command Chair overall, Reaction and Area Damage), and five more fourths.

Edge's distribution is still the narrowest on the board. He has two firsts, Single-Target and Ranged, and fifteen lasts. **Six are tie-breaks**: Crowd Control and Healing on the record, Team Mobility under the standing order, and Engineering, Cyber and Lab on Logic. **Four are fame axes**, where last means least exposed. **Five are last on substance**: Trust, Rescue, Medical, and two reputations he has not had time to earn.

Intrepid's distribution is still the most extreme on the board. He has seven firsts — four in combat, plus Civilian Stability, Support Burden and Power Independence — having lost Single-Target to the newcomer. He has forty-three last places, up one: Law, where the newcomer passed him. NOTE Six of the forty-three are risk axes, and they are good news: he is the least subvertible, least targeted and least leveraged person on the roster.

Where the first and last places fall

Last places, by section

	§1	§2	§3	§4	§5	§6	§7	§8	§9	total
Quasar-Force	·	·	1	1	·	2	·	·	2	6
Oracle	·	2	·	5	·	1	·	1	·	9
Lock-Step	14	·	3	2	·	1	2	·	7	29
Edge	·	·	1	4	4	·	·	4	2	15
Intrepid	1	6	4	10	13	2	5	2	·	43

Bubble area is proportional to the count (10.3). On §2, first place means most at risk; on §8, most exposed.

10.4 Structural Findings

Team-level conclusions that fall out of the axis data rather than from any single character. Findings are carried forward with their revision history. This pass: sixteen moved, three carried, one archived, one superseded, and three are new.

1 **The division of labour got a sentence, and a split.** MOVED Nobody appointed anybody; Iron-Side still declines to, Nightwing was off screen for a fourth session, and no external authority could reach the team. RETCON The Wonder Woman debrief the last edition recorded did not happen. **Inside the team, Quasar-Force gave the structure its clearest statement:** *"you teleport, Oracle predicts, and I figure."* Lock-Step ceded the maze to him by name, and the newcomer called Lock-Step *"Captain."* Then the structure split at the door: Lock-Step stayed with the frozen youngest, Oracle hung back, and Intrepid and Edge walked on. **Planning to Oracle, the crisis to Lock-Step, direction to Quasar-Force — and, for the first time, a junior pair who will go without them.** (*Standing since Session 3; externally re-anchored Session 14; internally filled Session 15; divided Session 16; stated and split Session 17.*)

2 **The tower's perimeter is half-closed, and the threat lives in its basement.** CARRIED The team was not at the tower. The anti-phasing half is still not recorded as built. The hostile progenitor is still in STAR Labs custody on the lower floors of the tower's own building, and Quasar-Force now says *"the crooked one"* at STAR Labs *"works in our building."* (*Standing since Session 10; half-closed and relocated Session 15; carried Sessions 16 and 17.*)

3 **Quasar-Force is a single point of failure, and the single point has one of its own.** MOVED For fourteen revisions this finding was about his body: 60 Health, no healing, and a one-strike removal on record. **Session 17 was about the object.** In an isolated dimension the mother box could not reach the Source and said so in letters — *"Cannot reach the Source... No connection. No response... I will find a way. Source—no! No! No—... Help."* — and he could not comfort her. His powers still worked in the bout. VOLATILE How long they would without the Source, nobody knows, and a facility wired with power nullifiers is the worst place to find out. **Energy Absorption answers the body; nothing on any sheet answers the box.** (*Standing since Session 4; first mitigation Session 15; edges tested Session 16; the box's own dependency found Session 17.*)

4 **Threats inside the trust perimeter: one masked, one named, one new unknown.** MOVED

- **Left.** OOC Exemplar I is outside the perimeter with detailed knowledge of the team.
- **Masked.** Azimuth, for as long as the circlet stays on. It stayed on through an abduction.
- **Named.** The newcomer's legend. The roster now states it as fact — *"An ancient army-slaying cataclysm reborn"* — and he told the team his control takes constant work. FLAG CLOSED His mentor tag is Barbara Gordon, not a confusion inside the team.
- **New, and outside: Firefly.** Somebody on Earth — *"Minji Lin aka Firefly aka the tiny terror aka Death from Nowhere"* — was able to *"elect"* the Titans to another dimension's arena. Nobody on the team knew the name. VOLATILE
- **Unchanged.** STAR Labs' CFO, the Destined, and the device keyed to Lock-Step's powers.

(*Standing since Session 8; rewritten Session 15; partly answered Session 16; Firefly added Session 17.*)

5 **Oracle has been counter-built four ways, and his advances answered none of them.** MOVED The counters so far:

- **Session 14:** the grab and the drain.
- **Session 14:** obscurement.
- **Session 16:** his Return Fire redirected onto a teammate.
- **Session 17:** his own kit, worn by a power copier, which stunned a teammate with his Suppressive Fire and parried his swing with his own Point-Blank Parry.

ADVANCE The two advances are declared, Agility and Accuracy. Neither is a mental power that projects strength (the grab), Uncanny (the soft Ego door) or Focus damage reduction (the drain). **His Rank 3→4 track is now complete, so the answer cannot arrive before Rank 4.** (*New Session 14; untested Session 15; third counter Session 16; fourth counter and advances declared Session 17.*)

6 **Cost runs opposite to capability, and the newcomer's rebuild moved him toward the expensive end.** MOVED Edge gave up his healing factor for a point of Ego, and fell from +6.0 to +4.5 on support burden: the medic put 60 Focus into him within the hour. Quasar-Force fell to −3.0 on the same heal and a penalty. **The medic now carries two members who cannot get themselves up.** The burgers are the first thing anyone but Oracle has paid back in kind. (*Standing since Session 9; anchor removed Session 15; half-restored Session 16; eroded by a rebuild Session 17.*)

7 **Robustness runs opposite to power, and the middle sagged.** MOVED The section spread held at 1.27: Lock-Step still leads and Intrepid still trails. **The members between them fell.** Oracle went negative (+0.17 → −0.17) on a module that reacted to the abduction and a copy that beat him. Quasar-Force fell to −0.57 on the box. **Three of the five now have negative robustness means**, and the newcomer is second, on a profile that has never been tested. (*Standing since Session 11; first narrowing Session 15; widened Session 16; middle sagged Session 17.*)

8 **One healer, now carrying two members who cannot recover on their own.** MOVED Session 16 tested the healer at full load. Session 17 tested the arithmetic. **The three members with healing factors woke on their own and the two without did not**, and the rebuild had just made Edge the second of them. Oracle spent 120 of his last 125 Focus getting them up, leaving 5 of 180 and a day of sleep, before a fight he could not rest through. Lock-Step's hex-heal was not used for a third session. **The single-healer finding now has a second dimension: the number of members who depend on him between fights, not just during them.** (*Standing since Session 7; tested at full load Session 16; dependency doubled Session 17.*)

9 **Legal exposure is concentrated in two members, and both reached a new depth on the same subject.** MOVED **Quasar-Force reached the floor (−10.0)** on foreknowledge: he is *"very confident"* the Destined will *"kill every man and woman in that lab,"* and still defends sending them. **Lock-Step moved to −9.0** on motive: *"deaths we're not worried about right now."* **The errand has stopped being a request made in a hurry and become a position held at leisure, by two people, in front of witnesses.** (*Standing since Session 8; broadened Session 14; concentrated Session 15; accumulating Sessions 16 and 17.*)

10 **The best pairings on this team, and the one the team refused to practise.** MOVED The Oracle–Lock-Step resonance was not used. The Session 16 pairings — Edge with Intrepid, and Edge with Oracle on Focus damage — were not tested, and the second no longer exists, because the rebuild removed Edge's Focus-damage line. **The newcomer asked the team to rehearse its pairings — *"I need to form part of that"* — and the team declined**: *"our maneuvers is like dancing... you just fill it in the moment."* The telekinetic nudge remains undeclared doctrine, and the pre-mission questionnaire is still unwritten. (*Standing since Session 6; half-closed Session 15; extended Session 16; rehearsal refused Session 17.*)

11 **"The powers were never the problem" — resolved in the affirmative.** CLOSED, ARCHIVED The finding was about Exemplar II's sheet; §11 carries the record. (*Opened Session 9; closed Session 14; archived Session 15.*)

12 **Research institutions hold this team's biology, and one of them is a suspect.** CARRIED, WITH A NEW DATUM STAR Labs built Oracle's body, wants Quasar-Force in a laboratory, holds the Breeder in custody, and its CFO signed out the car that took five teenagers into its garage. **Session 17 adds that Quasar-Force's father works for STAR Labs**, which Lock-Step, at least, did not know. The same boy expects the Destined to kill *"every man and woman in that lab."* VOLATILE Which lab, and whose colleagues, the log does not say. (*Standing since Session 12; STAR Labs converted from custodian to suspect Session 15; carried Session 16; the father placed Session 17.*)

13 **The Justice League has gone from client to host to backstop — and the debrief did not happen.** MOVED RETCON The last edition's *"client to host to backstop to debrief"* loses its last step. The team was taken before it reported to anyone, and the League's one line into it — Quasar-Force's channel to Wonder Woman — could not reach a pocket dimension. FLAG Her Session 14 disclosure commitment was made to Exemplar II, and whether it binds the current roster is still untested. **The newcomer's view of the League is the most favourable on the team**: *"That's not how Justice League works, okay?"* (*Standing since Session 12; converted Sessions 14 and 15; debrief withdrawn Session 17.*)

14 **Two Justice League civilian identities spoken aloud in a compromised building.** SUPERSEDED BY 16 *(New Session 14; superseded Session 15.)*

15 **The team has no answer to area denial or obscurement — and now, on paper, it has both, in one member.** MOVED **Edge kept Heightened Senses 2 through the rebuild**, so the obscurement answer is still on paper. **The rebuild added the team's second area attack**, Supernova, so area damage is no longer one person's stomp. Neither was used in Session 17. The opponents who used obscurement in Session 14 are still at large, bar Ecliptica. **Both answers are the same fifteen-year-old, on the same 90 Health, with no healing factor.** *(New Session 14; worse by departure Session 15; obscurement answered on paper Session 16; area answered on paper Session 17.)*

16 **The team is publishing itself — now to another universe.** MOVED Nothing was published on Earth. In a facility with cameras in every room, on what the hosts called an episode, Quasar-Force and Lock-Step told the opposing team, on camera:

- that Quasar-Force will not age;
- where his father works;
- that a crooked STAR Labs figure works in the team's building;
- that Wonder Woman gives them missions;
- that they know a "*Ravenwing*";
- and Lock-Step's first name.

For two revisions this finding was about the team producing exposure and an enemy spending it; Session 17 is the team producing it for an audience nobody on it can name. *(New Session 15; first priced Session 16; exported Session 17.)*

17 **A second cosmic institution has a claim on a Titan, and it works in time.** CARRIED The ring did not charge and the oath was not remembered ("*Eventually, I will remember the vow, okay, guys?*"). Lock-Step called the Grey Lantern "*my mentor technically now*," and Intrepid called the order lazy. RULING Time Powers are on the GM's banned list, and whatever the ring does will arrive as plot. *(New Session 15; carried Sessions 16 and 17.)*

18 **The team has contracted a villain team for lethal work — and the newcomer objected.** MOVED **The first objection on record came from the member who had been on the team for an afternoon**: "*if they're really killing people that's kind of our problem too right?*" It drew the errand's fullest defence yet:

- **Lock-Step:** "*deaths we're not worried about right now*," and "*we can either save and protect our righteousness or actually save people's lives.*"
- **Quasar-Force:** "*the destined will kill every man and woman in that lab, whether the progenitor is there or not*," and "*I think we're compromising on the killing.*"
- **Oracle** vouched for Lock-Step's account of the stakes and said nothing about the killing.
- **Intrepid:** "*I get what you're saying.*"

The newcomer's answer became the arena's rule. **The question this document carried unscored about Oracle's silence is now scored** (1.10, 1.12, the inserted 1.14, and the existing 1.14 bumped to 1.15). The Destined have not reported back; if the hosts' promise holds, no time has passed for them either. *(New Session 15; unresolved Session 16; first objection Session 17.)*

19 **The roster is five, and the newcomer rebuilt himself toward the vacancy's centre.** MOVED Of the six things §11.3 said the replacement would most usefully bring, Edge now brings two on paper (an answer to obscurement, and a second area attack), two in part (field investigation; robustness) and two not at all (a second healer — the rebuild removed his healing factor — and adult or professional standing). **He also brings things the vacancy did not describe**: the team's best single-target line, its second social instrument (Ego 7), and its loudest voice against killing. §11.3 has the detail. *(New Session 15; partly filled Session 16; rebuilt Session 17.)*

20 **The hive wanted the team, and somebody else took it.** MOVED Session 16 ended with the brood's orders changing to "*collecting you since you proved yourselves worthy.*" Minutes later, at the staging point, the team was collected — by an arena's producers, on Firefly's nomination, not by the hive as far as anyone knows. Lock-Step's hexed telepathic link to Blitzkrieg found "*her mind... not present to break into*," which is what a link across a dimensional boundary finds. VOLATILE Whether the two collections are one is the session's open question. *(New Session 16; overtaken Session 17.)*

21 **The first fight in which every member went down — and the retcon of its ending.** MOVED RETCON The last edition's account of the end of Session 16 — post-fight heals, a trip home, a debrief — is withdrawn. **What remains is starker:** the team got out of the warehouse on Let's Go and the last of Lock-Step's Focus, reached a staging point, and was taken there while two of its members were still below zero. The five teenagers are where the team left them: three unconscious in a mob warehouse, one in handcuffs, two at large. *(New Session 16; corrected Session 17.)*

22 **The team was taken off the board.** NEW For the first time, the whole team was removed from its world:

- **Every outside line failed.** The drones, the Green Lantern communicator, the teleport and the hexed telepathy all hit the dimensional boundary.
- **The captors held power over them.** They promised a return "*precisely at the moment and place that you left*," and enforced their rules by freezing people in place. They had banks of power nullifiers that they did not turn on.
- **The fight was a show.** The hosts set the team against another universe's Titans for a show with a thirty-second minimum. The team turned it into a sparring match, and some of it into a friendship.

Nothing the team did in Session 17 can be seen from Earth, and everything it said is on somebody's tape. *(New Session 17.)*

23 **The adult deficit is now the team's consensus — Oracle included.** NEW For sixteen sessions this was Lock-Step's grievance. Quasar-Force argued with it ("*they're still good people*"), and Oracle stayed out of it. In Session 17:

- **Oracle joined it:** "*I still believe in saving people. I just think that most of the people telling us what to do don't know what they're doing*," and, about the newcomer's briefing, "*So now you know the kind of stuff we got to put up with.*"
- **Another universe's Titans confirmed it, in unison:** "*yeah, pretty useless.*"
- **Lock-Step summed it up:** "*You just got to stay a kid at heart because apparently, once you grow up, you know, it's just bad.*"

The member most likely to be appointed by the adults now thinks most of them don't know what they're doing, and the newcomer — trained by Black Canary, found by Barbara Gordon, recruited by Nightwing — is the only member still arguing the other side: "*You guys have lost a lot of hope on the adults.*" NOTE This campaign's roster notes record that the GM has a long pattern of absent or inattentive adults; the finding is about the team's view of that pattern, not a verdict on it. *(New Session 17.)*

24 **A newcomer in a hurry, and a team that does not rehearse.** NEW Session 17 is the first session in which a member pushed the team to change how it works:

- **A formation.** "*We can train for at least three of those 24 hours.*"
- **A principle.** "*We follow the rule when it's easy and when it's hard.*"
- **A method.** "*one problem at a time*", and "*you're doing a lot of assumptions.*"

He won the principle and lost the formation. The argument ended with "*I give up, I completely give up*" and "*I can't believe that guy saved my life.*" **The team has improvised successfully for seventeen sessions — "*I think they're very successful so far*" — and has never had a member who wanted it to stop.** Whether the formation gets trained when they get home, and who wins that argument, is a Session 18 question. *(New Session 17.)*

§11 Departed — Exemplar II (Archive and Vacancy Analysis)

Exemplar II's player left the campaign between Sessions 14 and 15. In the fiction he was left out of the Grey Lantern's transport; on Day 46 he "returns to earth, with only a quick goodbye to the team," and from Day 53 he "is not present" at the tower. The roster lists him under Departed PCs. ***He is not ranked in this revision.*** *His replacement, Edge, arrived in Session 16 and rebuilt himself before Session 17; this section keeps Exemplar II's final standing as the document last measured it and measures the vacancy against the replacement as he now stands.*

11.1 Final Standing (frozen at Session 14)

Measure	Figure	Place (of five)
Composite (94 axes)	**+1.49**	3rd
Median / SD / range	+2.5 / 4.04 / −8.0 → +8.5	—
Fame-inclusive composite / 0–10 rescale	+1.64 / 5.82	3rd
Combat / Non-Combat / Robustness / All-Capability	4.71 / 6.49 / **6.25** / 5.70	5th / 3rd / **1st** / 4th
Character / Team Standing / Reputation / Combined	+3.89 / +5.18 / +3.23 / +3.86	3rd / 2nd / 3rd / 3rd
Risk Load	−6.06	3rd most exposed
Raw position (101 axes)	6 firsts, 15 lasts, average 3.21	—
Polarity-adjusted position composite	2.71 (median 3.0)	3rd

His six first places: Civilian Life Stability (**+7.0**), Low Operational Support Burden (**+8.5**), Field Investigation (**8.8**), Law (**7.0**), Function Without Powers (**8.0**), and Law-Enforcement Reputation (**+6.0**). Four of the six were versions of one fact: **he was the only adult with a job.**

His final sheet. He had 150 Health, 90 Focus, H-DR 2 and F-DR 2. His abilities were Melee 7, Agility 0, Resilience 5, Vigilance 3, Ego −2 and Logic 6, and his defences 19/19/17/15/18/18. He carried two Iconic Items, both flawed *Custom Built Parts for the Exemplar II Project* and *Human (David's DNA) use only*:

- **AI Cybernetic Implants & Sensory Bionics:** AllSpeak, Heightened Senses 2, Microscopic Awareness, Uncanny 2.
- **Torso Cybernetic Implantation:** Mighty 3, Speed Run 1, Venom Bash, Venom Burst.

The roster's Rank 3→4 plan ends at its fourth line: "{*Player left the game*}."

His arc in this document. He joined in Session 3 and went through four sheets in eight sessions. For three revisions this document described a generalist who bought capability and never used it. **His last session on the team was the best any character had had in the campaign**, and he played it on the sheet he already had:

- **Azimuth.** He saw the astral figure nobody else could, sketched it, and put a name on a New God missing for thousands of years.
- **Ecliptica.** He found the drone footage that identified her.
- **The casualty.** He moved the unconscious Quasar-Force out from under the figure.
- **Wonder Woman.** He told a founding member of the Justice League that she had failed a team of minors, and got "*Consider me admonished*" and a disclosure commitment in return.

Session 14 moved him on sixty-one axes, the record until Lock-Step's seventy-two in Session 15; Edge's sixty-two in Session 17 passes it, thirty-one of them on a rebuild. OOC The clone subplot — a father who intends to overwrite him — is unresolved. So is the one instrument that would have answered it for him: Microscopic Awareness, never once demonstrated on screen.

A precedent worth noting. Exemplar II was the campaign's serial re-specifier: four sheets in eight sessions, each rebuild moving him further from the character the document had just scored. Edge's rebuild before his second session is the first re-spec on the team since Exemplar II's, and it ran the other way. Exemplar II's re-specs moved him toward generalist capability he rarely used. **Edge's moved him from a precision role into the two gaps this section has listed since Session 15: area damage and a second social instrument.**

11.2 The Vacancy, Axis by Axis

What the team had in him at Session 14, who covered it after he left, who covered it once Edge arrived, and who covers it now that Edge has rebuilt himself.

Capability	Exemplar II (S14)	Covered at S16	Covered now (S17)	What the rebuild changed
Field Investigation §5.4	**8.8** (1st)	Quasar-Force 7.5	Quasar-Force 7.8, Lock-Step 7.7	Little. Edge (5.5) had the best epistemics in the room and his senses' results are unlogged; Lock-Step's human intelligence is now within a tenth of first.
Sensory Awareness §5.9 / counter-stealth	8.0 (2nd)	Oracle 9.0, Edge 8.0	Oracle 9.0, **Edge 7.5**	Heightened Senses 2 survived the rebuild; Situational Awareness did not. Untested.
Law §5.6	**7.0** (1st)	Quasar-Force 5.0	Quasar-Force 5.0	Nothing. Edge (1.5) stated the principle, not the law.
Alliance Capital §5.15	9.0 (2nd)	Lock-Step 7.2	Lock-Step 7.2	A new line, not a replacement: Edge (6.5) now names Barbara Gordon beside Black Canary.
Engineering / Lab / Cyber §5.2–5.5	7.0 / 7.5 / 5.0 (2nd on all three)	Oracle 4.5 / 7.0 / 4.5	Oracle 4.5 / 7.0 / 4.5	Nothing. Edge has Logic −1 (0.5 on all three).
Low Support Burden §3.5	**+8.5** (1st)	Intrepid +6.5, Edge +6.0	Intrepid +6.5, Edge +4.5	**Backwards.** The rebuild removed his healing factor, and the medic paid for it within the hour.
Civilian Stability §1.7	**+7.0** (1st)	Intrepid +6.0	Intrepid +6.0	Nothing.
Function Without Powers §6.2	**8.0** (1st)	Lock-Step 7.5	Lock-Step 7.5, **Edge 5.5**	Some. Melee 6 and Ego 7 are abilities and survive a nullifier.
Robustness index §6	**6.25** (1st)	Lock-Step 5.30, Edge 5.12	Lock-Step 5.30, Edge 5.17	Little. Still second; he traded a healing factor and a dodge for innate attacks and a dependency on concentration.
Area Damage §4.11	5.0 (2nd)	Lock-Step 3.0	**Edge 8.5**	**Filled, on paper.** Supernova (Force): every enemy within ten spaces. Unused.
Physical Durability §4.1	7.8 (2nd)	Edge 6.2	Oracle 6.3, Edge 5.5	Backwards. Sturdy 3 does not replace a healing factor and a dodge.
Law-Enforcement Reputation §9.3	**+6.0** (1st)	Oracle +5.5	Oracle +5.5	Nothing. Edge (+1.0) is unknown to the police.

What left that the team is better off without is unchanged: his OPSEC record (§1.6 **−1.0** at Session 14), whose exposure did not leave with him, and his risk load, including a patron who was also his adversary.

11.3 What the Replacement Actually Brought

Two revisions ago this section ranked six vacancies by how much each one cost the four who remained, and said the replacement would be scored on arrival against that list. Session 16 was the arrival; Session 17 is the rebuild.

1. **An answer to obscurement and invisibility** (finding 15). **Yes, on paper — kept through the rebuild.** Heightened Senses 2 is the power that saw through the Vapors of Galator and tracked an invisible assassin in Session 14. Nothing has tested it.
2. **A second healer** (finding 8). **No, and the rebuild made it worse.** He sold his healing factor for a point of Ego, so the team now has two members who cannot recover on their own and still one person who can heal them.
3. **Field investigation in person. Partly.** The instrument is excellent and the operator has Logic −1. Session 17 showed the habit an investigator needs — "*you're doing a lot of assumptions*" — and nothing yet of the method.
4. **Adult or professional standing** — law, contracts and police relations. **No.** He is fifteen. He now has two adult professional mentors, and a conduct file a panel would like (§1.15), which is a connection and a character rather than standing.
5. **Robustness**: a member who functions when powers, preparation or support are removed. **Partly.** Still second on the index (5.17); depowered he is a trained fighter with Ego 7, and powered he depends on a concentration he says he has to work at.

6. **A second area attack or real crowd control. Yes on area, on paper (Session 17 rebuild); no on control.** Supernova (Force) gives the team its second area attack, with a ten-space reach and wording that spares allies. He has no grab and no barrier, and ties fourth on Crowd Control.

What nobody asked for, and he brought anyway:

- **The team's best single-target line** (§4.10, first, taken from Intrepid): Ego ×7+7 with Smash-style scaling, two edges, and a second blast each round through Lightning Actions.
- **A guaranteed first turn** in every fight (Lightning Actions), the second-best reaction profile on the team.
- **Ego 7**, level with Lock-Step for the highest social ability score on the team, and a Monster trait that intimidates.
- **The team's conscience on the Destined errand**, on the day he joined (§1.10, §1.14, finding 18).
- **Food**, which on this team had only ever come from one person (§5.11).

Gone with the rebuild: the best ranged *precision* on the team (the called shot that destroyed the device), the second Suppressive Fire line, and the only dodge reaction on the roster.

The verdict, revised: two of six on paper, two in part and two not at all — and a profile that now covers the vacancy's two largest combat gaps and none of its adulthood. He replaced Exemplar II's senses and his area attack, and none of his adulthood. He is now third on both composites (+0.98 by score, 2.71 by position), second on combat value and potency, and fourth on non-combat potency.

11.4 Loose Ends He Leaves Behind

- **The Azimuth file.** He produced the only worked identification from Justice League material Wonder Woman handed him. The log does not record whether the team kept the file.
- **Wonder Woman's disclosure commitment** — "*every piece of available information I have, even if it is just suspicion*" — was made to him, in front of four witnesses. RETCON The last edition thought the team had briefed her after Session 16, which would have been the first test of whether the commitment binds the current roster. It did not happen, so the question is still untested (finding 13).
- **Exemplar I.** OOC He intends to overwrite his son, he knows this team, and in Session 10 he hacked a phone in seconds. He is outside the perimeter, and the roster's own backstory note anticipates him becoming "*an enemy of David and the group.*"
- **Quasar-Force's lab access.** The roster still lists "*Exemplar's Dad's Lab*," and it should be treated as stale.
- **Bedroom 3** is occupied again, by Edge, who has not been recorded sleeping in it: his first rest as a Titan was in a captor's bunk room, in another universe.
- OOC **Precedent.** This campaign has lost three player characters before him: Robin was kidnapped, tortured and placed at the centre of a sacrifice ritual; Magius was abducted, and the abduction turned out to be staged; Up-Tempo quit silently. The GM has turned departures into plot before, and the father is the obvious hook if the GM wants one. VOLATILE

§12 Closing note on this revision

Session 17 had no sheet changes among the veterans except Oracle's two declared advances, one rebuilt newcomer, a day of argument, and the shortest fight on record. The team was taken from a staging point minutes after the warehouse — RETCON not from home, after a debrief, as the last edition said — and woke in a pocket dimension where every outside line was dead. Its hosts set it against another universe's Teen Titans for a show. The team turned the show into a sparring match, the newcomer knocked out his opponent in one turn and sat down, and the session paused at the start of Round 2.

The standings did not move, and the reasons did. Oracle's composite lead held at 0.43 — 0.432 against 0.427 restated with Heroism (0.394 as published) — while both leaders fell by about four hundredths:

- **Oracle** answered the errand question with deference, entered his first burnout item, and lost to a copy of himself.
- **Quasar-Force** said the sentence about the lab, leaked his life to another universe, and could not comfort the box.

Lock-Step fell by the same amount, on the door, the doctrine and the formation he would not rehearse. **The two juniors rose: Intrepid on the first session in which his calls carried, and Edge by 0.37, to +0.98, 86% of it on what he did and said rather than on his rebuild.** The score and position composites now agree that Edge is third.

One axis was added: 1.14 Heroism — risk taken or cost paid for someone else, toward the public, teammates or enemies. Its order is the same at the retroactive Session 16 baseline and after Session 17: Oracle, Intrepid, Edge, Quasar-Force, Lock-Step. Four of its five scores moved. **The three members who defended the errand or vouched for its author fell; the one who objected rose.** Intrepid held: the ram he took and the traps he walked balanced an "*I get what you're saying.*" It is the only psychology axis on which Lock-Step is last and still positive, because nobody on the team has gone into more danger for more people, and nobody else has commissioned a killing.

Last revision asked Session 17 to test ten things:

1. **The three in the warehouse, and the 24-hour clock.** Not tested, and frozen: if the hosts keep their promise, the team returns to the moment it left, with the three where they were left and the clock where it stopped. Lock-Step's link to Blitzkrieg found no mind to reach, because she was a universe away.
2. **The hive's collection order.** Overtaken. The team was collected minutes later — by an arena's producers, on Firefly's nomination. Whether the hive and Firefly are connected is the session's open question (finding 20).
3. **The Destined errand.** Not resolved, and for the first time **objected to**: by the newcomer, on the day he joined, which drew the errand's fullest defence yet from Lock-Step and Quasar-Force. **It also settled Oracle's voice**: he vouched for the errand's author and said nothing about the killing. Now scored in 1.10, 1.12, the inserted 1.14 and the existing 1.14 bumped to 1.15.
4. **Oracle's advances. Declared**: Agility 4 → 5 and Accuracy 1 → 2. Neither is the escape power or Uncanny, so §4.2, §4.5, §6.4 and §7.3 resolve to no change, and finding 5 gained a fourth counter instead.
5. **Edge's senses against obscurement.** Not tested. The senses survived the rebuild.
6. **Edge's legend, and the mentor tag. The tag is settled**: Barbara Gordon. **The legend is no longer hedged by the roster** — "*An ancient army-slaying cataclysm reborn*" — and he said what keeping it down costs: "*I practice my concentration a lot because if I don't, things could get bad.*" What the monster is, and whether it can be woken, is still unanswered.
7. **Quasar-Force's floor.** Not tested; he took no Health damage. The thing tested instead was the box (finding 3).
8. **The healing backup.** Not used, for a third session. The healer emptied himself before the bout instead, and the rebuild added a second member who depends on him (finding 8).
9. **Nightwing's first report.** Impossible from a pocket dimension, and RETCON the one report the last edition thought had gone to Wonder Woman did not. When it comes, it has to cover:
   - Day 56;
   - the warehouse;
   - the recruit Nightwing briefed without telling the team;
   - an abduction to another universe;
   - and what two of his longest-serving students now say about the adults who tell them what to do.
10. **The flip and the third place.** The fame-inclusive score composite favours Quasar-Force for a third revision (by 0.17) while the position composite favours Oracle, and the raw first-place count has disagreed with the headline for four. **Third place survived its first deep negative** — Healing at 0.0 — and the methods now agree on Edge, except on the fame-inclusive treatment, where the position composite has Edge and Lock-Step dead level; without Heroism it would put Lock-Step ahead by two hundredths.

What Session 18 should test:

1. **The bout.** It paused at the start of Round 2:
   - Quasar-Force is in Briar Patch's branches, and Lock-Step is frozen.
   - Oracle and Edge are coming off stuns, and Intrepid is up after a 72-point ram.
   - Four-Fold is at 1 Health, and Pink-Shift is in the staging room.

   The win condition and "*what will happen to the loser team*" are unknown. Whether the team ends a staged fight without hurting anyone badly — or the hosts decide thirty seconds was not enough — decides §4.17, §4.18 and finding 22.
2. **The nullifiers.** They were off. If the hosts turn them on, §6.2 stops being hypothetical, and what happens to a boy whose cells run on a mother box is the worst-case version of it.
3. **The box.** "*I will find a way. Source—*" — whether the isolation affects Quasar-Force's powers, whether the box recovers when they return, and whether she can be comforted. §1.2, §2.6, §6.3 and finding 3 all wait on it.
4. **Edge's Supernova.** The team's second area attack has not been thrown. Its first use decides whether §4.11's 8.5 was right, and whether "*carve through everything around him*" is a description or a warning (§4.16, §6.5).
5. **Firefly, and the way home.** Who Minji Lin is, how she could "*elect*" the Titans, and whether the hosts keep their promise to return the team to the moment it left.
6. **The Destined errand.** Still the largest single swing in the document, for Lock-Step and now for Quasar-Force, and with a newcomer on record against it. If the Destined have killed the lab's staff by the time the team returns, §1 (Heroism among it), §2 and §9 move for both.
7. **The formation.** Edge asked for one and was refused. Whether it gets trained at home — and who wins the argument when it is asked again — decides §3.2, §5.14 and finding 24.
8. **Oracle's verdict on the adults.** "*Most of the people telling us what to do don't know what they're doing*" is one sentence. If it becomes a stance, §1.3, §3.6 and §9.7–9.10 move; if he says it to Nightwing, it moves differently.
9. **The leaks.** Another universe's Titans now know that Quasar-Force will not age, where his father works, and Lock-Step's first name, and so does whoever was behind the cameras. If any of it travels home, finding 16 becomes a §8 matter.
10. **The flip, and third place.** If the fame-inclusive flip holds again, the two methods disagree on first for a fourth revision. On third, Edge leads Lock-Step by 0.92 on score and 0.17 on position: it would take a session of deep negatives for the newcomer to lose it, and he has just had his first.
