Teen Titans (Blüdhaven) —

Active PC Rankings & Analysis

The scales are primarily a Tier-1 Special Operations Unit–style personnel readiness, suitability, and threat-exposure assessment, scored and aggregated using sports-analytics methodology.

SNAPSHOT	Post-Session 16 · Campaign Day 56 (Saturday afternoon; in-world 2026-12-12) · Rank 3.5	**ROSTER ANALYSED**	Oracle · Intrepid · Quasar-Force · Lock-Step · Edge (*new this revision*) (*Exemplar II departed — archived in §11*)
MODEL	Claude Opus 5.5 @ Max Thinking Effort	**SCOPE**	101 ranked axes · 505 scored placements · one departed-PC archive
FORMAT	every returning placement is itemised twice — an **All-time** case for the score and a **Session 16** shift with its reason — and every one of Edge's carries a single **Debut** case (see *How to read an entry*)		

0.39

Oracle's composite lead, up from 0.36 — the first time it has widened since 0.77 → 0.81

+0.566

Edge's debut composite: third, ahead of Lock-Step and Intrepid

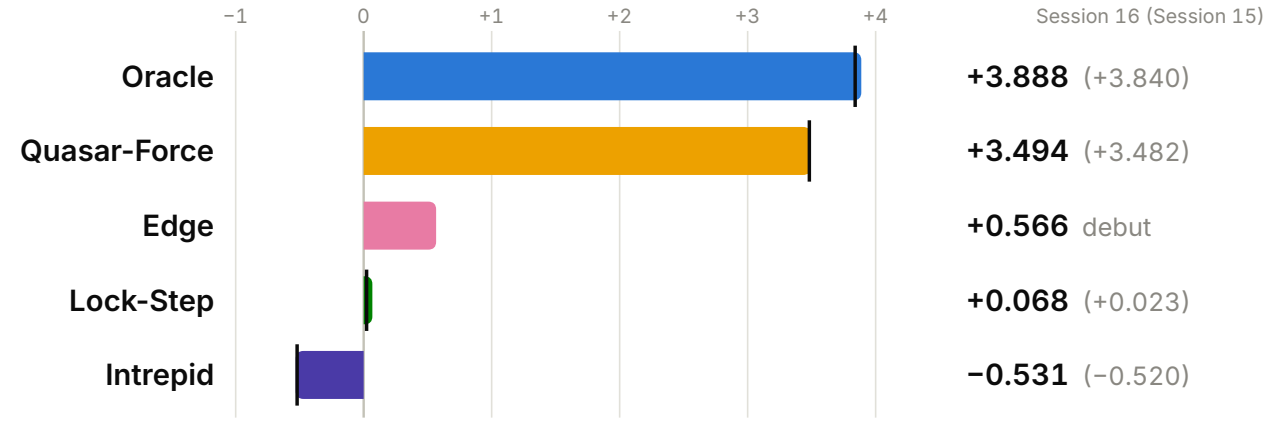

59

axes moved among the returning four, against 183 in Session 15

5 of 5

Titans went to zero Health or below in the warehouse fight

Composite net score, 94 axes

Session 16 composite on the −10…+10 scale; black ticks mark Session 15 (§10.1.2).

Reading Notes

All content is generated by AI, Claude Opus 5.5 @ Max Thinking Effort

Sources Fed to AI to generate this:

- (85% human) Roster and Logs, Session 16 edition — the project file *Marvel Multiverse - Teen Titans - Session 16 - Roster and Logs*.
- (100% human) Superheroic Excursion Log – https://docs.google.com/document/d/1s3vu046GPrY7sqZHHgVPIIbyYcj4GD0gDTFs5CZrZbU/edit
  - Sessions 1–4 are from memory well after the sessions occurred.
  - Session 12 is assisted by OBS recording and AI transcription.
  - Session 13 is assisted by OBS recording and AI transcription, and in the dense roleplay, technobabble and lorebabble there is a lot of copy/pasting from the AI transcription, since it is superior in detail and accuracy. Still technically human, as it was spoken by humans.
  - Sessions 14 and 15 are assisted by OBS recording and AI transcription, but copied and pasted a lot less. They were manually transcribed from the audio recording with the AI transcription used as subtitles.
  - Session 16's transcription method is not stated in the log. Its last minutes are summarised rather than transcribed: "*Session time is up and over-time. The remaining events are hand-wave.*"
- (AI-generated) The Session 15 edition of this document – https://docs.google.com/document/d/10o5E2q-qBxQRCzybLD8waFCFdYEJJh-ylkrVnUeC5wM/edit — the baseline for every score, finding and revision history carried forward.
- Some 'personal intelligence' data Claude stores on me, with major highlight bullet points from prior conversations (such as Iron-Side / Nightwing reports, psychological evaluations, and the Wenas family therapy session), has some minor bleed into the content below. Those AI-generated documents were not attached to the conversation.

Sources of the 101 scales:

- 40% from myself, the human
- 30% from Anthropic Claude
- 20% from Google Gemini
- 10% from OpenAI ChatGPT
- 10% from the remainder of the 'council of 12 AIs' – Z.AI GLM, Moonshot Kimi, xAI Grok, High-Flyer DeepSeek, MiniMax Agent Max, Alibaba Qwen, Meta Muse Spark, Mistral Vibe, Amazon Nova

This is an out-of-character analytical document. It uses mechanics, GM-side lore and player knowledge freely. Where a judgement depends on information no PC possesses, it is marked OOC. Where a judgement depends on information only *some* characters hold, the holder is named.

How to read an entry. Each of the 505 placements has one of two shapes. A returning member's entry looks like this:

> 1 **Name** score
>
> ALL-TIME The standing, campaign-wide case for the score.
>
> SESSION 16 **7.0 → 7.5 (+0.5)** The shift since the last edition, and why.

- **All-time** is the character's standing file on that axis across Sessions 1–15: the sheet, the traits and backstory, the repeated behaviour, and the incidents that set the level. **Session 15's detail has been folded into it**, and earlier sessions compressed, so that the file reads as one case rather than a stack of revisions.
- **Session 16** states the shift as numbers, measured from the Session 15 edition's score: `S15 → S16 (change)`, or *holds at* when the score did not move. It then gives the Session 16 evidence and the reasoning for the size and direction of the move, or for the hold. Position changes among the returning four are measured like-for-like, with Edge removed (§10.0).
- **On the §2 risk axes** a more negative number means more exposure, so the label adds *exposure up* or *exposure down*.
- **Edge's entries carry a single item, *Debut, Session 16*,** because he has no file before this revision. It gives the case for the debut score from three sources only: his sheet, his backstory and one fight. Read every debut score as provisional.

Ranking convention: Position 1 = most of the named quality. Where a low score is desirable (burnout risk, enemy targeting, legal exposure), position 1 = highest risk, and the axis header says so explicitly. **This revision ranks five characters, so positions run 1–5.** Where two characters share a score, the printed order is the tie-break and the axis carries a note: on an otherwise unbroken tie the newcomer is listed second, and on the Logic-driven non-combat axes, ties between Intrepid and Edge are broken on Logic.

Confidence markers:

- Orderings drawn from repeated logged behaviour are stated plainly.
- *Closest call* explains the split where the logs support two defensible orderings.
- *Volatile* marks a ranking that would move on a single die roll, GM ruling or piece of unconfirmed lore.
- FLAG marks a score that depends on something the document cannot see, chiefly Oracle's undeclared advances and Edge's mentor tag.
- RULING cites a house rule or roster ruling.
- MECHANICAL FLAG marks a sheet-level caveat.

Damage notation. Damage multipliers are written *multiplier + add* per the roster convention: **7+7** is a ×7 multiplier with +7 applied after the multiplication, not a flat bonus of 14. Expected values use a Marvel-die mean of 4.33 (a roll of 1 counts as 6) and exclude Fantastic doubling, edges, assists and Focus investment. MECHANICAL FLAG Edge's roster line is used as printed (×7+7), although it does not appear to include his Iconic weapon's +1 ranged multiplier (§4.10).

The roster changed again. Edge joins the team in Session 16, filling the vacancy Exemplar II left.

- **Who he is.** Murphy King, fifteen, played by Aiden Snowveil. Monstrous origin (the Monster trait), Rank 3.5, all advances taken. His roster title is *The Reborn Calamity* and his role *Precision Marksman & Spatial Infiltrator*. He lives in bedroom 3, which was Exemplar II's.
- **How he arrived.** The roster records that he became aware of the team via Oracle, and was approached and recruited by Nightwing, operating as Batman. In play, Nightwing briefed him on the five villains before the fight, and the team did not know.
- **What he brings, in one line.** The best ranged attack on the team, a second Suppressive Fire, Heightened Senses 2 (the senses that left with Exemplar II), a healing factor and a dodge — and a backstory about an ancient monster that "*cut down armies*," which this document treats as VOLATILE.
- **Comparisons.** Score-based aggregates are per-character means, so his arrival changes no returning member's figure. Position-based aggregates are reported on the five-person board and, for the returning four, like-for-like against Session 15 (§10.0).
- **The archive.** Exemplar II stays frozen in **§11**, which now also measures the replacement against the vacancy.

Edge is the story of this revision. He enters third on the composite (+0.57), ahead of Lock-Step and Intrepid, on the flattest profile on the board, and second on both combat aggregates. In his first fight he named the first target — "*can turn 5 vs 5 into 6 vs 4*" — and the plan was built around it. He put 101 into one villain in one action, knocked out the member of the brood who had stolen a Titan's power, shot the device the brood came for out of a phaser's hand and destroyed it, and held off Blitzkrieg alone so the extraction could start. He is **first on Ranged Combat** and the only member with Heightened Senses. Against it: Logic −1, sixteen last places (seven of them tie-breaks and four of them fame axes, where last is good), no record outside one afternoon, and a legend nobody has examined.

The fight is the story of the session. Seven rounds and a hand-waved ending against five teenage villains carrying the Breeder's brood, and **every member of the team went to zero Health or below**. The brood explained, mid-fight, that it had ganged up on Quasar-Force first because of his fame, his known fragility and his preference for grappling. Then its orders changed to "*collecting you since you proved yourselves worthy.*" The team destroyed the device the brood came for and went home one teleport at a time; three of the five were left unconscious in a Marrow Syndicate warehouse, one of them in Lock-Step's handcuffs, and two escaped.

The standings barely moved, and they moved toward Oracle. Fifty-nine axes changed among the returning four, a third of Session 15's 183. **Oracle's composite lead widened from 0.36 to 0.39**, the first time it has widened since 0.77 → 0.81, because the session ran on healing, debuffs and a plan, and none of it needed an engineer. On the 86 favourable axes Oracle is back in front by three hundredths, and 93% of his lead is still the risk section. The fame-inclusive flip held for a second revision: Quasar-Force leads that treatment by 0.21.

- **Lock-Step** moved on 24 axes, sixteen for the better. He set the chair down in front of the newcomer ("*Oracle is our plan guy*"), asked a teammate's consent before teleporting him for the first time, extracted all four teammates on the last of his Focus, and gave the first explanation of himself on record ("*Once I get that back, I think I'll be a bright-eyed kid just like you… But until then, this is me*"). He also cuffed one of the five teenagers he had publicly mocked and left her in a mob warehouse.
- **Quasar-Force** moved on 9. The circlet passed its first hostile test, and he was knocked down twice anyway, the second time to −30.
- **Intrepid** moved on 13. He became the first Titan to have a power stolen, took 290 damage, and refused an extraction under fire.
- **Oracle** moved on 13. The room named him its planner, and every recovery in the fight went through him — including his own, from −2: "*Drop me again, it was worth it.*"

No sheet changed among the returning four. Every Session 16 movement is play, apart from Edge's arrival. **Oracle's two Rank 3.5 advances are undeclared for a third session.** FLAG

Principal evidence gaps:

- **Edge's mentor tag.** His roster tags include *Mentor (PC: Oracle)*, while his backstory says "*Oracle found him online… she called the Birds*," which reads as Barbara Gordon. Nothing in Session 16 shows the PC Oracle had met him. FLAG Not scored as a mentorship.
- **Edge's identity.** The full roster entry and backstory say Public ("*not very well known*"); the condensed entry says "???". Scored as Public.
- **Edge's weapon.** The Cutting Edge grants +1 ranged damage multiplier, and the roster's ×7+7 line does not appear to include it. MECHANICAL FLAG Scored on the printed line.
- **Oracle's Rank 3.5 advances are undeclared**, for a third session. §4.2, §4.5, §6.4 and §7.3 each carry a FLAG: one likely purchase would move all four.
- **The hand-waved ending.** The last minutes of the fight are summarised, not played: Dragonborne's flight, Edge's rear guard, the extraction, and the GM's reasons for Blitzkrieg's withdrawal (Intrepid's weight and the Force whip). They are scored as recorded and marked wherever they decide an entry.
- **The rewound clock.** To introduce Edge, Session 16 winds the clock back ten to fifteen minutes, from the team entering the warehouse to the team gathering outside it. The rewound version is treated as canon.
- **The device.** Keyed to Lock-Step's time manipulation, sought by the brood, and destroyed before anyone examined it. What it did and who wanted it are unknown. VOLATILE
- **Unresolved threads.** The Destined errand, Lobo, the 24-hour feral clock, the fate of the three teenagers left in the warehouse, and the ring. None appears in Session 16, and nothing about them is scored.
- **Nightwing and Batman are off screen for a third session.** Nightwing acted offscreen, recruiting and briefing Edge; §9.8 and §9.9 are otherwise scored on implication.
- **Wonder Woman as the team's de facto mentor** is the user's reading. The GM has not declared it, so this document treats it as practice rather than appointment. The team briefed her after the fight.

Scoring. Every entry carries a cardinal score alongside its position, because ordinal rank alone cannot tell a rout from a photo finish. **Three native scales are used, chosen by what each axis actually measures**; the full rationale is in 10.0:

- **Magnitude** `0.0 to 10.0` — Low means *absent*, never *harmful*.
  - Capability and exposure:
    - §3.6–3.9 – Team Internals, Command Chair & Pecking Order
    - §4 – Power / Ability – Combat
    - §5 – Power / Ability – Non-combat
    - §6 – Capability Robustness & Conditionality
    - §7 – Power / Ability – Overall
    - §8 – Fame (Exposure)
  - Anchors:
    - 0 none, completely absent capability
    - 5.0 competent baseline for a Rank 3 street-level hero
    - 8.5 elite for the tier
    - 10 best plausible at Rank 3.
- **Valence** `−10.0 to +10.0` — These have a real negative pole: a person can be an active liability, not merely lacking.
  - Psychology, discipline, standing and opinion:
    - §1 – Psychology, Morality, and Discipline
    - §3.1–3.5 – Team Internals: internal reputation, influence, trust, cohesion, and low operational support burden
    - §9 – Reputation / Opinion
  - Anchors:
    - +10 maximal asset
    - 0 genuinely neutral
    - −10 maximal liability.
- **Risk** `−10.0 to 0.0` — Always signed negative, because exposure is only ever a cost.
  - Threat exposure:
    - §2 – Enemy Risk
  - Anchors:
    - 0 = none meaningful
    - −10 = maximal, operations already underway.

505 scores total (101 scales times 5 PCs).

Score Quick Recognition Pattern:

- §2 – Enemy Risk is always negative, `−10.0 to 0.0` Risk.
- Everything else – If the score has a sign, it is `−10.0 to +10.0` Valence. Otherwise it is `0.0 to 10.0` Magnitude.

Reading the charts in this edition

The charts and the board are drawn from the scores printed in this document and add no new scoring. Each member keeps one colour and one initial throughout:

O Oracle Q Quasar-Force L Lock-Step I Intrepid E Edge

Score strips. Every axis opens with a strip on its own native scale: `0–10` for magnitude, `−10…+10` for valence, `−10…0` for risk. A dot marks each member's Session 16 score. Where a returning member moved, a hollow ring and a thin line trace the score back to Session 15. Members within a dot's width of each other are stacked, so a tower of dots is a photo finish.

Entry markers. The numbered disc is the position on the axis, in the member's colour; the grey pill is the score.

The board. Valence and risk cells run from red (liability or exposure) through grey (zero) to blue (asset). Magnitude cells run from pale (absent) to dark blue (best plausible at Rank 3). Fame cells are grey, because exposure is scored without a sign.

The Board

O Oracle · Q Quasar-Force · L Lock-Step · I Intrepid · E Edge

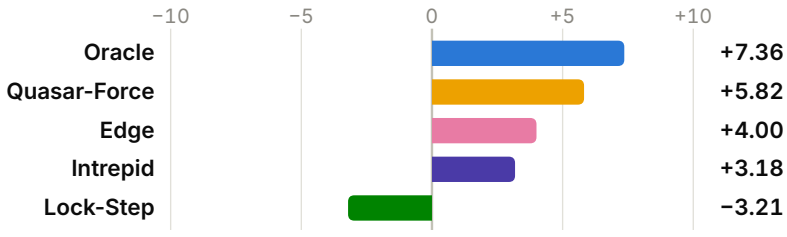

Valence & risk −10 … +10 · Magnitude 0 … 10 · Fame (no sign) 0 … 10 · Bold = position 1 · ▲▼ moved since Session 15

Scores are the Session 16 figures printed in §1–§9; position 1 on the §2 risk axes is the most exposed member. Section means on the composite scale are in §10.1.3.

§1 Psychology, Morality, and Discipline

Section mean on the composite scale, −10…+10 (§10.1.3)

1.1 Current Psychological Stability

1 Oracle +7.5

ALL-TIME The most settled person in the building: a purposeful role, accepted structure and no running quarrel with any authority. Session 14 was the test. He was held in an inescapable grab, drained from 180 Focus to 3, watched a teammate get one-shot and could not heal him, and then called Wonder Woman himself and reported the failure plainly. The ceiling is set by a hazard that never shows: Eidetic Memory means he does not get to forget the bisection, the jars or the body he failed to revive. Session 15 recorded the first weariness in his voice — "*It's no different than Nightwing*" and "*a big old mess like we usually do*" — logged as a sign, not scored as a crack.

SESSION 16 **holds at +7.5** The weariness continued as humour ("*Don't worry, the bar is low, it's alright*") and as candour ("*No plan. Not on this one*"). The test was physical. A 72-point Banging Heads put him on the floor at −2, his healing factor got him up, and he ran back into the warehouse at a sliver of Health: "*Drop me again, it was worth it.*" He then kept a teammate conscious for four rounds and moved Let's Go at the moment the extraction needed it. **Stability is what he showed; weariness is what he said.** Neither moves him.

2 Edge +3.0

DEBUT · SESSION 16 Composed from his first line ("*I don't want to break your hope*") to his last stand. A glitch bomb put him at exactly 0, his healing factor brought him back, and he held off Blitzkrieg alone for a round. Against it, his sheet and backstory carry the heaviest identity load on the roster: constant headaches since the powers arrived, eyes that glow, and a legend that he is a monster reborn that once "*cut down armies.*" The roster's narrative profile frames him as "*still figuring out whether he gets to be Murphy King or has to be the monster.*" **Second on one session of calm, carrying the largest unexamined question on the team.**

3 Quasar-Force +2.0

ALL-TIME His composure has been a fixture of the campaign, and Session 14 found that part of it is not his. The mother box holds a "*Peter Pan think happy thoughts*" baseline in its host and damps the panic-fear and anger that would impair his logic. **The famous calm is partly a second party's thermostat**, and a pencil sketch of Azimuth was enough to override it for five minutes on an infirmary bed. Two things hold the score up: he worked out mid-attack that the panic was not his, and he recovers absurdly fast. Session 15 told him he and the box may no longer be distinct, that he is "*no longer merely human,*" and that Azimuth wants him alive. He named her Stella and went back to his build list. "*I might end up better off dead*" is the darkest line on his file, and he said it without visible distress.

SESSION 16 **holds at +2.0** Before the fight he was the room's optimist: "*I like being hopeful. I want to help people get their happy thoughts back.*" Inside it, he was knocked to −5 in the Marvel round, spent Karma to get back to 13, moved to cover and kept working, then went to −30 — the deepest knockdown on his file. No panic and no episode from the box are recorded, and the log ends before any aftermath. Composure under fire is scored in 1.5 and 1.9. **Nothing in Session 16 tested the thermostat.**

4 Intrepid +1.0

ALL-TIME Iron Will and Fearless are on the sheet, and for most of the campaign his interior surfaced only in asides — the Session 10 monologue and its self-medication ladder. Session 14 put it into words as a fear of being discarded, with four reversals of his own decision in one conversation. Session 15 was the quietest session in his file, and it held the first forward-looking line he has said: "*I don't even think I'm as strong as Superman. Not yet anyway.*" Against it, "*I'm not really a thinker.*"

SESSION 16 **+0.5 → +1.0 (+0.5)** The most punishing fight on his file: his Sturdy stolen, 72 and 60 from Dragonborne, down twice. Nothing in the log records fear of losing control or of being replaced. When Lock-Step asked whether he would stay out if teleported clear, **he refused to leave.** In Session 14 the same teammate flipped him four times in one conversation; in Session 16 he offered him an exit under fire and got a no. The rise is small because it rests on behaviour, not on anything he said.

5 Lock-Step −4.5

ALL-TIME Mechanically the most armoured mind in the party and psychologically the most defended by avoidance. He is an orphan who says he is *glad* to have no parents, fills his time with dates and parties, distrusts adults by default, and has Berserk on his sheet. Session 14 logged the first slip in conversation, a rant at Wonder Woman with his rationality degrading. Session 15 put the most load on him of any session: he ran the team ("*it's tough*"), asked a villain to kill for him "*slurred in moral conflict,*" and had the happiest moment on his record when the ring went on. He stayed lucid, with no Berserk.

SESSION 16 **holds at −4.5** The session opened with the longest anti-adult statement on his file — "*Apparently all the adults are trash,*" "*Adults just suck,*" and Iron-Side "*lived in the security room… I got stonewalled*" — delivered to a teammate he had met a minute earlier. Then, answering Quasar-Force, came the first explanation he has ever given of himself: "*I just hope that one day, you get my happy thoughts back. Adults being adults and actually being helpful. Once I get that back, I think I'll be a bright-eyed kid just like you… But until then, this is me.*" That is insight, and it is scored in 1.2. It was followed at once by "*Maybe I just need another party,*" which is the old coping style. In the fight he was lucid and Berserk-free. **The structure is unchanged; for the first time he can describe it.**

1.2 Psychological Resilience vs Future Trauma (Trauma Processing & Recovery Rate)

1 Quasar-Force +7.5

ALL-TIME The best demonstrated recovery curve on the team. Stabbed in Session 14 from 60 Health to −12, he was woken at 5 and pacing the air within the hour. The roster explains the curve, and the explanation is not entirely reassuring: the box is deliberately building his resilience to trauma and panic. **The resilience is real, it is engineered, and the engineer has PTSD.** Session 15 put that half under expert care. Taleria made the box three promises and named Azimuth's error ("*He treated her as machinery*"), and when Quasar-Force raised the box's trauma under an alien telepath's read, the box did not panic.

SESSION 16 **holds at +7.5** Two knockdowns in one fight. Between them the curve did what it does: kept upright by Let's Go at −5, he spent Karma to reach 13 Health, went to cover and was back to work in time to crush Stote unconscious. The second knockdown, to −30, ends his part of the log, so the second recovery is untested.

2 Oracle +6.5

ALL-TIME A steady base, a purposeful role and Determination, and caretaking is protective. The fracture line this axis has named for five revisions is specific: *if Endo is seriously hurt on Oracle's watch, Oracle is the one who breaks.* Session 14 came as close as it could without arriving, with Oracle grabbed, drained and unable to heal Endo at −12. **He has not talked about it.** Session 15 added a hardware fragility (the module faltered under temporal transport) and one line drifting toward fatalism.

SESSION 16 **+6.0 → +6.5 (+0.5) The fracture line arrived, and this time he had the tools.** Endo went to −5 in the first exchange and to −30 in the third. Oracle kept him in the fight with Let's Go for four rounds, put 15 Health into him mid-fight knowing it would not reach zero, and healed him to consciousness afterwards. In between, Oracle was knocked out himself and came back with "*Drop me again, it was worth it.*" The scenario this axis predicted would break him is the one in which he did his best work. The other half point waits on the conversation about Session 14 that has still not happened.

3 Edge +3.0

DEBUT · SESSION 16 His backstory is a trauma with a clean before and after: an assault near him, the attacker's weapon sliced to pieces, then the headaches, the glowing eyes and the white hair. **His response was the healthiest one available — he went looking for help**, and when it came he trained "*all-out*" with Black Canary. In play he took 102 damage, went to exactly 0, got up on his own healing factor and held a doorway alone. What is not yet scored is the question his narrative profile says he is still deciding — Murphy King or the monster. That question is where future trauma would land.

4 Intrepid +1.5

ALL-TIME Iron Will, Fearless, Enduring Constitution, and a real willingness to take hits so others don't. The first data on how he metabolises defeat came in Session 14, and he did it by lowering expectations: nothing could have gone differently, and complaining gets you replaced. The trauma he is least equipped for is still the one most likely to arrive — he has come within one die roll of killing ordinary humans three times — and the only coping he has ever described is the Session 10 ladder from aspirin to buying off the street.

SESSION 16 **holds at +1.5** The heaviest physical beating on his file includes the first power ever stolen from a Titan, and the log records no reaction from him in either direction. Nothing was processed because nothing was said.

5 Lock-Step −5.5

ALL-TIME Lowest, and the mechanics agree with the fiction: Berserk is a hardwired route from trauma to violence, avoidance is his default, and every pressure on him delivers the same message, *you are dangerous and you don't belong.* After the Session 14 defeat he converted the loss into grievances, a joke and a request for souvenirs within minutes. Session 15 made him the author of something that has not happened yet — the Destined errand, "*cinder blocks in the ocean*" — and gave him the first admitted cost ("*it would hurt my soul*") and the first adult approval he welcomed.

SESSION 16 **−6.0 → −5.5 (+0.5) For the first time he named the wound under the deflection, and he named it accurately:** adults who were meant to be "*actually being helpful*" and weren't, and the cynicism as the result — "*until then, this is me.*" Naming is not processing, and his next sentence was "*Maybe I just need another party.*" But for eleven revisions this axis has said that none of his responses touched the cause, and this one does. He was one-shot from 60 to −24 later the same afternoon; the log does not record how he took it.

1.3 Operational Longevity / Low Burnout Risk

(Position 1 = most sustainable.)

1 Oracle +6.5

ALL-TIME He sleeps, eats, cooks, patrols, reports and accepts the structure he is given, which removes the largest single source of teenage-hero attrition. **His one real risk is load, not morale.** He is the medic, the cook, the comms relay, the overwatch and Quasar-Force's unappointed guardian. Session 14 drained him to 3 Focus and cost twelve hours of sleep to reach 75. Session 15 rested him by circumstance rather than design, and recorded the first morale-shaped doubt in his file.

SESSION 16 **holds at +6.5** The load got heavier and he carried it. The room named him "*our plan guy*," and he was the only healer in a fight that put all five Titans on the floor — still healing when it ended. The plan question exposed a seam: asked for one, he had none ("*No plan. Not on this one*"). **The team's default answer to "what do we do" is one person, and he was tired before the fight started.**

2 Quasar-Force +6.0

ALL-TIME Intrinsically motivated to an unusual degree, with no physical attrition curve: pristine cellular maintenance, frozen ageing, and a full 60 Health back in ten hours of sleep. **The failure mode is self-maintenance, not motivation** — with structure imposed from outside he is fine. Session 15's six days of building were restorative rather than draining. Back home the load rose: make-up classes, back-end analysis, and drones built for a teammate's streaming.

SESSION 16 **holds at +6.0** He went into the fight optimistic and came out of it at −30, which costs time rather than motivation. Nothing in Session 16 touched the structure question.

3 Intrepid +2.5

ALL-TIME He loves the tank role, is good at it and heals between fights, so his physical attrition is low. The risk is psychological accumulation behind the physical durability, which surfaced out loud in Session 14. Session 15 brought the first motivation from inside him ("*Not yet anyway*") and 210 Health, which lets the accumulation stay hidden longer.

SESSION 16 **holds at +2.5** He took 290 damage by the log's count, and refused to be taken out of the fight. That is the tank's motivation working, and it is also exactly the accumulation this axis exists to watch.

4 Edge +2.0

DEBUT · SESSION 16 The case for him rests on structure, and the case against on the body. **For:** an active mentor who volunteered, deliberate training, and a combat loop that costs almost nothing (§4.3). **Against:** "*constant headaches*" since the powers arrived — a chronic symptom tied to the power itself — and grades that "*were already bad*" before training took the time. One session cannot show an attrition curve. The headaches are the item to watch.

5 Lock-Step −2.0

ALL-TIME The only member whose attrition risk comes from his relationship with adults: a file of structural grievances, school to the legal minimum, and "*keep it street level.*" What changed across Sessions 13–15 is that the grievances kept being answered, with pay, Wonder Woman's commitment and, in Session 15, a ring and a succession that anchor his motivation inside hero work. The grievances also kept coming back.

SESSION 16 **holds at −2.0** Both halves were at full volume. The grievance file got its longest entry — "*all the adults are trash*," the stonewalling, "*there should be more supervision*" — and he described his own role as "*the if it all goes to hell guy.*" Then it went to hell, and he did exactly that job, going back for the last teammate on "*just about the last of his focus.*" **The motivation that matters held, and the attrition driver is louder than it has ever been.**

1.4 Personal Discipline Outside of Combat

1 Oracle +7.5

ALL-TIME Structured mornings, breakfast for the house, patrols on schedule and reports filed. What sets him apart is that he holds a line under social pressure. The only deduction in sixteen sessions is the Session 12 all-nighter, and he managed even that through the proper channel. Session 14 added a correctly managed recovery under medical orders.

SESSION 16 **holds at +7.5** Session 16 had no downtime to test it.

2 Quasar-Force +4.5

ALL-TIME Rule-following but not self-regulating, and the gap between the halves defines his score. On duty he is excellent; off duty he needs structure from outside. Session 14 was four tasks at once and a sedative. Session 15 was the reverse: he stated his order of work three times and delivered three builds, in that order, inside six days. The standing deduction remains because the Watchtower supplied the structure.

SESSION 16 **holds at +4.5** No downtime. His pre-fight work was deduction and a proposed entrance plan, both scored elsewhere.

3 Intrepid +4.0

ALL-TIME First up every morning, oatmeal, out on patrol while still wounded, and he defers to team decisions without sulking. Against him: no initiative, no questions when invited to ask them, and a private drift toward self-medication.

SESSION 16 **holds at +4.0** "*Nothing, I guess.*"

4 Edge +2.5

DEBUT · SESSION 16 The one off-duty fact in his file runs both ways: he trained "*all-out*" with Black Canary, and his grades "*were already bad*" before that. On arrival he asked for the plan, then for the situation, which is the right order. Neutral-positive and provisional.

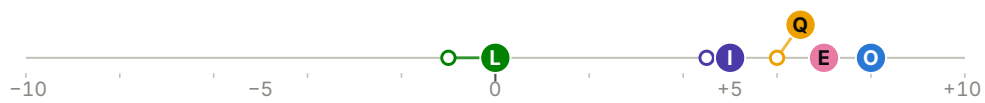

5 Lock-Step −7.5

ALL-TIME He skips school, ignores summons, once posted a sticky note saying to contact him only if someone was dying, sedated a teammate twice, concealed an artifact from his mentor, and treats breaking and entering as unremarkable. In Session 14 his conduct is the log's likely reason the team's Watchtower access was limited to the guest quarters. In Session 15 he slept through Iron-Side's make-up classes, admitted not listening in briefings, and streamed a Justice League station without asking anyone. **Nearly all of his self-directed effort goes into his own audience.**

SESSION 16 **holds at −7.5** No downtime. His one off-duty contribution was a briefing for the newcomer, and it was wrong on both facts it asserted. "*They just told him to fix it*" drew Quasar-Force's correction, "*You're mainly the one that told me to fix it.*" And "*they didn't even fill him in*" was wrong too, though he could not have known it: Nightwing had briefed Edge on every villain in the warehouse.

1.5 Personal Discipline in Combat

Session 16 is the first fight since Session 14, and the hardest the team has taken: all five members went to 0 Health or below.

1 Oracle +8.0

ALL-TIME He opens nearly every engagement by demanding surrender, holds actions rather than burning them, stays in position, reassesses targets on precognitive input, and heals rather than chasing kills. Session 14 was output under total neutralisation: grabbed, re-grabbed and drained, he fired whenever he had a target and spent turns on the escape only when the fog left him nothing to shoot. In Session 15 he positioned himself as the scout's healer before contact.

SESSION 16 **holds at +8.0** The opener was the plan executed exactly: Suppressive Fire on the agreed target, upgraded to a 6-1-6 by Charmed Life, for massive Focus damage and a stun. He kept Let's Go on the teammate who needed it for four rounds, then moved it to the one who could get everyone out. **Against:** knocked out in round two, he came back on his healing factor and ran straight back in at a sliver of Health — the team's only healer re-entering a room where a flying brick had just floored him. It produced the stun he wanted, and it is the riskiest thing on his file.

2 Edge +7.0

DEBUT · SESSION 16 A complete first fight. **He named the target before contact and the plan was built around it.** He shot and then moved — after the 74 + 27 on Stote he "*retreats away*" — and spent two actions assisting Intrepid at the moments that mattered, one of which turned a miss into a Marvel. He used Slow-Motion Dodge to cancel a charging Marvel, picked the device rather than a body when the device was the objective, and finished holding a door. One session, which is why he sits below Oracle.

3 Quasar-Force +6.5

ALL-TIME The best target-discriminator on the team, and his objective play from cover is textbook. **The deduction is the single most consequential discipline decision of the campaign:** in Session 14 he left concealment to take an artifact from a goddess with an unlocatable assassin in the room, and one action took him from full Health to −12. The objective reasoning was right; the risk arithmetic was not.

SESSION 16 **+6.0 → +6.5 (+0.5)** **The Session 14 lesson, applied.** Hit for 38 and 27 in the Marvel round before he could act, he was kept on his feet by Let's Go, healed on Karma and went straight to the far corner, behind a shipping container, and fought from there. From cover he grabbed Argent through her re-raised force field, pinned Dragonborne and crushed Stote unconscious. Blitzkrieg found him anyway — "*What's ya doing, Hiding?*" — because phasers do not respect containers. Hiding was the right answer, and it was not a sufficient one.

4 Intrepid +5.0

ALL-TIME Willing discipline and indiscriminate tools. He takes positioning suggestions without ego and tells teammates when to take an opening. Against him: Crushing Grip has done nothing in two sessions, he once considered punching through a floor to chase a phaser, and Ground-Shaking Stomp does not distinguish a goddess from a security guard.

SESSION 16 **+4.5 → +5.0 (+0.5)** His cleanest fight in three sessions. He used Banging Heads on the two right targets and Smash only with an assist behind it, and the one stomp he threw reached only the enemy he meant. With his Sturdy stolen, he "*contemplates using ram without any of his damage reduction*" — and didn't. Staying when offered an exit is scored in 1.12.

5 Lock-Step 0.0

ALL-TIME The record against him is severe: two Berserk episodes, teammates teleported out of combat without their consent, a blind teleport alone into a room of ten monsters, a proposed arson and a captive beaten conscious. Against it, clean combats in Sessions 11–14, with Session 14 the best of them: in, strike, out, and targeting direction taken from four teammates.

SESSION 16 **−1.0 → 0.0 (+1.0)** Five clean combats now, and the first change to the item that has defined this axis for him. **Before moving anyone, he asked:** "*Who is comfortable where they are at and who wants to move a little bit.*" He asked Intrepid directly whether he would stay out if teleported, accepted the refusal, and moved Oracle out of the building only once Oracle was unconscious. He offered handcuffs twice, and both refusals came from someone else's control. The one exception is that he moved Oracle *into* Argent's sphere with Teleport Together, and the log does not record whether Oracle agreed. He went down to a single Marvel-20 outside the building, with no Berserk at any point.

1.6 Operational Security Discipline

1 Oracle +7.0

ALL-TIME Textbook instincts without formal training. He shut down internal discussion in front of the Destined, keeps his reporting channel clean, and treats a teammate's misconduct as something a supervisor needs to know. In Session 14 he was the only person in the room who did not say a Justice Leaguer's civilian name aloud. In Session 15 his suggestion of a private call became a public broadcast because someone else made it one.

SESSION 16 **holds at +7.0** Nothing to secure in a warehouse fight.

2 Quasar-Force +6.5

ALL-TIME The team's most active security practitioner and one of its two largest leaks. He built the code rotation that Fade-Out called "*a pain in the neck*," and Fade-Out explained in the same sentence why it could not work against the system's designer. **The leak is a habit: he answers before deciding whether the asker should have the answer.** Session 15 brought the largest security improvement in the team's history — a signal mask he wears and a teleport shield he held against a teammate's suggestion to drop it — alongside the old habit (the Kwa story told "*to anyone else who would listen*").

SESSION 16 **holds at +6.5** Nothing leaked, and the circlet stayed on.

3 Intrepid +4.0

ALL-TIME Secure by having nothing to spill and a Secret Identity to protect. In Session 15 he was streamed as the future Superman in his hero identity only.

SESSION 16 **holds at +4.0** Nothing changed.

4 Edge +2.5

DEBUT · SESSION 16 A public identity, though "*not very well known*," and no lapses in his first session. There are no practices on file either. Neutral-positive until something tests it.

5 Lock-Step −4.5

ALL-TIME Until Session 15 he was personally the hardest member to trace and institutionally the most corrosive: a concealed artifact, "*Nightwing can't be trusted*," team decisions routed around, and "*Diana*" in a tower the Destined enter at will. **Session 15 was the largest single-axis fall in the document (−5.0).** He livestreamed the Watchtower, ran a week of lab coverage, and broadcast a surveillance operation with five juveniles' faces. He also confirmed his real name by text to an unknown sender, invited a telepath into his memories and proposed dropping the tower's new shield for a villain team.

SESSION 16 **holds at −4.5** No broadcasting is recorded. His welcome to the newcomer included the tower's breach history and Iron-Side's place in it, which is team business told to a teammate; its accuracy is scored in 1.4.

1.7 Civilian Life Stability & Maintenance Load

How stable the non-hero life is, and how much overhead it imposes. High = stable and low-maintenance.

1 Intrepid +6.0

ALL-TIME Secret Identity, school, and nothing else on the board. The absence of complications is the entire score, and he has held first since Exemplar II left.

SESSION 16 **holds at +6.0** Nothing touched his civilian life.

2 Oracle +3.5

ALL-TIME Stable inside the tower and structurally unable to live a normal civilian life outside it. **Extreme Appearance means he cannot walk into a shop unremarked**, and the roster records his civilian identity as *lapsed*.

SESSION 16 **holds at +3.5** Nothing changed.

3 Edge +1.5

DEBUT · SESSION 16 He has a public identity with low recognition, a school record that was poor before the powers arrived, and a visibly changed body — white hair, eyes that glow and constant headaches. He now lives at the tower, in Exemplar II's old room. Nothing on file describes his family. **Positive because there is still a civilian life to protect, and low because almost nothing about it has been described.**

4 Quasar-Force −1.0

ALL-TIME Publicly identified, with parents at a known address in Slate Hill, a family in court-adjacent therapy, a personal maintenance load nobody else carries, and OOC ageing that has stopped. Session 14 added a New God; Session 15's circlet answers the detection half of that.

SESSION 16 **holds at −1.0** Nothing changed.

5 Lock-Step −3.5

ALL-TIME No parents, no fixed address and a truancy record he keeps adding to, filled with dates and parties rather than anything load-bearing. **The instability is the thing he says he is glad about.** The weekly stipend is the one structure he asked for. Session 15 added a surname, a named best friend and a public channel, all anchored to fame.

SESSION 16 **holds at −3.5** Nothing changed.

1.8 Adult / Guardian / Peer Support & Safety Net

1 Quasar-Force +9.5

ALL-TIME By a wide margin the best-supported person on the team. He has two engaged parents, a family therapy arc, a father at STAR Labs, Nightwing watching since before he had a codename, Guy Gardner, and Oracle as an unappointed guardian. Session 14 added Iron-Side's surgery, Wonder Woman's personal sanctuary offer and Doctor Taleria. Session 15 added a week of Taleria at his bench, a founder who came in person when called, and a Green Lantern who picked up mid-fight. **He is the only member for whom the League's support is personal rather than institutional.**

SESSION 16 **holds at +9.5** Already at the top of the scale, and nothing new in a session spent in a warehouse.

2 Edge +6.5

DEBUT · SESSION 16 He arrived with a support network nobody else on the team brought. **Black Canary volunteered to train him** because his power is dangerous. **Nightwing, operating as Batman, recruited him personally and briefed him on the villains before the fight** — the only Titan to get a briefing from him in three sessions. The backstory adds an "Oracle" who found him online and called in the Birds of Prey. FLAG The roster tags him *Mentor (PC: Oracle)*, but the backstory says "*she called the Birds*," which reads as Barbara Gordon. Nothing in Session 16 shows the team's Oracle knowing him beforehand. His family is not described.

3 Oracle +5.0

ALL-TIME Nightwing is a mentor he actually uses and is the one most often absent; STAR Labs is an institutional origin. League hospitality and Taleria's interest raised the score in Session 14. In Session 15 he said it first: "*It's no different than Nightwing.*" **He is used to being the one who looks after people.**

SESSION 16 **holds at +5.0** Nightwing was absent from the table for a third session and present behind it — he recruited and briefed the newcomer. Oracle's support in the fight was his team.

4 Intrepid +3.5

ALL-TIME Nightwing, and a Secret Identity that implies an intact civilian family, with no detail on either. The one time he asked for something, in Session 14, a teammate called him a coward until he changed his mind.

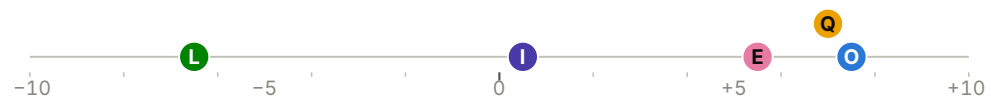

SESSION 16 **holds at +3.5** Nothing changed.

5 Lock-Step −3.5

ALL-TIME An orphan who volunteers that he is glad he has no parents. He distrusts Iron-Side and Nightwing and keeps his confidence for Zatanna, who is not present. **Since Session 13, adults he distrusts have kept acting in his interest anyway.** Session 15 brought two firsts: he asked Iron-Side what to do and did it, and a cosmic order tested him, found him worthy and gave him a ring.

SESSION 16 **−4.0 → −3.5 (+0.5)** The loudest grievance on file, and beneath it the clearest statement of need he has made: "*Adults being adults and actually being helpful.*" **Then, in the field, he used one.** "*Nightwing did say we can bring them back, so knock them out*" is the first time he has cited an adult's instruction to settle a question in a fight. Against it, the same breath accused Nightwing of failing to brief the newcomer, which was wrong.

1.9 Emotional Regulation / Impulse Control

1 Oracle +7.5

ALL-TIME He has held lines twice against the most socially dominant person on the team without escalating, and rations healing by arithmetic while people bleed. Session 14 was regulation under helplessness. In Session 15 he was talked over on a public stream without rising to it.

SESSION 16 **holds at +7.5** Knocked out, up again and back in, and his only line about it was a joke at his own expense.

2 Quasar-Force +7.0

ALL-TIME Regulated to a degree that would be impressive in an adult, and part of the reason is that the box damps his panic-fear and anger. **That is regulation and outsourcing at once, and this axis scores the outcome.** His deficit is attentional rather than emotional. His most heated moment in Session 15 was intellectual — pressing a Grey Lantern on principle until a teammate stopped him.

SESSION 16 **holds at +7.0** He met Lock-Step's sarcasm with optimism and two knockdowns with calm.

3 Edge +5.5

DEBUT · SESSION 16 Calm, dry and polite through a briefing delivered mostly as complaint ("*Ok, that told me nothing*"), and no recorded flinch across 102 damage. The one deliberate display was a weaponised one: back up from zero, he "*uses his monstrousness to intimidate with edge.*" **That is control of the frightening part of himself, used once and on purpose.** The risk this axis watches is the same part used once and not on purpose, and his whole profile is written around keeping it in.

4 Intrepid +0.5

ALL-TIME He voices his fear of losing control during fights, and the Session 10 ladder is impulse management sliding downhill in one monologue. Session 14 added four reversals and an escalated jab, and Session 15 enthusiasm ahead of information ("*It's time to take them out!*").

SESSION 16 **holds at +0.5** No fear statements this time. He thought about ramming without damage reduction and didn't.

5 Lock-Step −6.5

ALL-TIME **Berserk is loss of impulse control rendered as a game mechanic.** Around it sit sedating a teammate on impulse, beating a captive conscious and proposing arson. The violent impulses have stayed down in recent fights; the social ones have not. In Session 15 he started a stream inside a League station, shamed five teenagers on camera, and made his kill request "*slurred in moral conflict.*"

SESSION 16 **holds at −6.5** The Session 15 pattern, unchanged. The violent impulses stayed down through a fight that one-shot him; the social ones ran, and the session opened with an unprompted grievance delivered to a stranger. "*This is what happens when I stay with the team. I should have vanished,*" said seconds after a redirected shot hit him, is the honest version of the old impulse to leave. **He stayed.**

1.10 Moral Agency / Ethical Independence

Capacity for independent ethical judgement, as against deference and obedience. High = reasons from his own principles and acts on them.

1 Oracle +9.0

ALL-TIME **The clearest demonstrated moral agency on the team.** He refused to drug Quasar-Force when asked by the team's most socially powerful member, objected aloud to the prisoner humiliation, called Nightwing about the artifact knowing the cost, and refused Psyche's offer from inside his own head. In Session 14 he was the one who credited Wonder Woman's apology. In Session 15 he changed his mind about the progenitor on the evidence and went past the room ("*We really should help them find a different place*"). NOTE He was present for the Day 56 planning in which two teammates arranged a lethal outcome by proxy, and raised no objection.

SESSION 16 **holds at +9.0** Session 15 left a question — whether that silence was bandwidth or acquiescence — and **Session 16 did not answer it.** Nobody discussed lethal force. The Destined errand came up twice in passing, as Quasar-Force's "*murder hobos*" and Lock-Step's "*the other team's problem,*" and drew no objection from anyone. Oracle's one sentence about the warehouse's occupants is garbled in the transcript — "*we need to, hopefully, die, harming them?, dissuade them?*" — and it was Lock-Step who answered with knock-outs. **The question is carried, unscored, to Session 17** (§12).

2 Quasar-Force +8.0

ALL-TIME He reasons from an articulated frame rather than from instruction. In Session 14 he defended the box's personhood against the only qualified person in the room ("*She is still a person*"). In Session 15 he asserted himself four times — the tentacle, the shield, a principle argued with a Grey Lantern, and a proposed truth exchange — and also moved, on his own reasoning, toward lethal force by proxy.

SESSION 16 **holds at +8.0** He corrected the dominant teammate on the record ("*You're mainly the one that told me to fix it*") and defended the adults the room was condemning ("*everyone is busy, and we're busy too*"). Both are independence, and both are continuous with what he already scores.

3 Lock-Step +6.0

ALL-TIME Maximum independence: he acts on his own judgement and defers to nobody. His Session 13 position on adults sending children into world-ending situations was vindicated in Session 14, and he wrote the team's only mission-vetting proposal. In Session 15 he questioned a cosmic officer's premise and built the argument she adopted. **Then he abandoned his own stated principle under a clock** ("*we don't have the time to be democratic*"), which caps the score.

SESSION 16 **holds at +6.0** He put the line where it belonged for the warehouse — "*Nope, nope... knock them out*" — and did it by citing Nightwing, which is agency borrowing authority rather than replacing it. "*The other situation, is that other team's problem*" keeps the Session 15 exception exactly where he left it.

4 Edge +4.0

DEBUT · SESSION 16 So far the evidence of independent judgement is tactical rather than moral. He made the case for Argent first on his own reasoning, and declined the cynicism he was offered on arrival ("*I don't want to break your hope*"). The backstory's one moral fact is a choice: when his power appeared, he went looking for someone to teach him restraint.

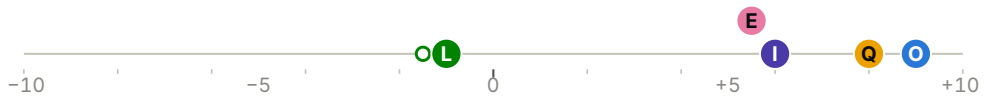

5 Intrepid +2.0

ALL-TIME "*Will go with any team decision*" — and in Session 14 he went with it and then argued that there had been nothing else to go with. Session 15 changed nothing: he accepted a cosmic officer's premise, voted to attack, and said "*I'm not really a thinker.*"

SESSION 16 **+1.5 → +2.0 (+0.5) The first time he exercised a judgement against a teammate's offer and kept it.** Asked whether he would stay out if teleported clear, he refused to leave. It was a small decision, and it was his own.

1.11 Morality / Moral Alignment

Not judgement or discipline — simply how good this person is.

1 Oracle +9.0

ALL-TIME He heals people who were trying to kill him minutes earlier, demands surrender before every engagement, attempted to revive a man he had no reason to save, and refuses to take part in cruelty, out loud. In Session 15 his instinct about a predator was elimination, and his conclusion, reached by listening, was relocation and protection.

SESSION 16 **holds at +9.0** Every point of damage he dealt was Focus damage, and his last act of the fight was healing the teammate who could carry the others out.

2 Quasar-Force +8.0

ALL-TIME He treats captured enemies as people, pulled bodies out of a gassed room, gave a statement against his own interest, and took a knife through the abdomen for a nation he has never visited. **The fatality on his record was an accident he has never tried to minimise**, and his stated rule is to kill only against lethal intent that cannot otherwise be stopped. Session 15 was the best moral record of his campaign, with one sentence set against it: "*I'm sure we would be more comfortable unleashing Fade-Out with his full lethal fury on the controller.*"

SESSION 16 **holds at +8.0** "*I want to help people get their happy thoughts back*," said to a teammate who has lost his, is the moral centre of the session's first scene. "*We sent the murder hobos after the bad progenitor*" is the Session 15 sentence again, an hour later and in plainer words. **The line has not moved back, and the hold is the cost of that.**

3 Intrepid +6.0

ALL-TIME Straightforwardly decent. He takes hits meant for softer people, is afraid of hurting anyone, and said his reason for going to the Watchtower was "*I'm just going to protect you guys.*" He sits below the top two only because his goodness is passive.

SESSION 16 **holds at +6.0** He stayed in the room where the others were being hurt.

4 Edge +5.5

DEBUT · SESSION 16 The first recorded use of his power was protective: an attacker's weapon sliced apart during an assault. His first fight was spent taking a mind-controller off the board, shooting a device out of a villain's hand, and holding off Blitzkrieg alone so that Lock-Step could get Oracle and Quasar-Force out. VOLATILE The roster's legend is that what he was "*cut down armies.*" **This axis scores the person in the room, and the person in the room used a lethal tool for protective ends.**

5 Lock-Step −1.0

ALL-TIME Genuinely split rather than simply bad. **For:** handcuffs offered first, bloodless captures, a bank's worth of hostages teleported clear, and the Session 14 heal. **Against:** a fourteen-year-old teammate sedated twice, a restrained prisoner humiliated, and consent treated as a formality. Session 15 put the largest numbers on both sides: a species saved, and five released teenagers shamed on camera, two teammates' minds linked without consent, and a detainee's death commissioned so the Titans could "*keep our hands clean.*" **On Kwa his argument was "they said they're people"; at home it was "it's not human."**

SESSION 16 **−1.5 → −1.0 (+0.5)** **The good got bigger in the place it matters most this week.** The warehouse held five infected human teenagers, and he insisted they be knocked out, offered them handcuffs twice, asked teammates before moving them, and carried four teammates out of the building. Against it, "*The other situation, is that other team's problem*" leaves the Session 15 errand unretracted, and "*I don't know why you keep wanting to do things the hard way*" was said to a teenager whose eyes had just rolled back under someone else's command. The inconsistency the last revision named — people when they are human, not when they are not — is still the shape of his morality.

1.12 Line-Holding Under Duress

Not what they believe — what survives contact with pressure.

1 Oracle +9.0

ALL-TIME Four separate documented holds against four kinds of pressure — peer (the sedation request), group (the humiliation), loyalty (the call to Nightwing) and compassion (Psyche, inside his head). He has never folded. Session 15 added the first open question on his file: no objection when two teammates arranged a lethal outcome by proxy.

SESSION 16 **holds at +9.0** NOTE Still open, and still not scored (see 1.10).

2 Quasar-Force +7.0

ALL-TIME He recited the conduct standard from memory, held his position against a Lex-Corp attorney, and held against expertise on the box's personhood. **What he does not do is convert holding a line into imposing one.** Session 15 had two holds against a teammate — the tentacle and the shield — and one shift: his line on force moved under a 24-hour clock, to lethal action by proxy.

SESSION 16 **holds at +7.0** "*We sent the murder hobos after the bad progenitor.*" The line that moved in Session 15 is still where the clock left it, and nothing new pressed on it.

3 Intrepid +3.5

ALL-TIME None of his lines was tested until Session 14, and then one broke four times in a single conversation under one teammate's single word. **"Goes with the team" and "cannot hold a position against a friend" were different findings, and the second was his.**

SESSION 16 **+2.5 → +3.5 (+1.0)** **The first held line on his file, and it was held against the teammate who broke him in Session 14.** Offered an exit mid-fight, with his Sturdy stolen and his Health falling, he refused to leave and stayed refused. The log adds that when the team finally withdrew, he was one of those who "*would be objecting to retreat*" and was too unconscious to do it.

4 Edge +3.0

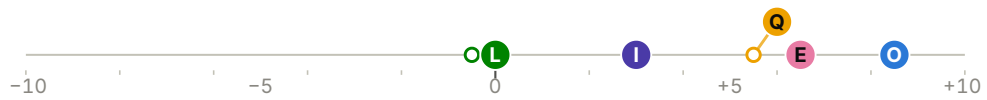

DEBUT · SESSION 16 His physical line held: knocked to exactly zero, up again, and holding Blitzkrieg off alone. No moral line was pressured. Restraint, the value his whole profile is built on, was not tested against a reason to drop it.

5 Lock-Step −4.0

ALL-TIME **He has been the pressure the others hold against** — the sedation, the humiliation, the concealment and the non-consensual extractions were all his initiative. His early holds were self-interested. Session 15 gave him the first hold not in his own favour, on Kwa. Then came the collapse in its most literal form: "*No, I'm not coming around on lethal force*" in the room, and "*cinder blocks in the ocean*" in private.

SESSION 16 **−4.5 → −4.0 (+0.5)** He held the non-lethal line for the warehouse under the pressure of a fight that one-shot him, and he was not the pressure on anyone else: he asked before moving people. The Session 15 collapse is unretracted.

1.13 Judgment Under Stress

1 Oracle +8.5

ALL-TIME He retargets mid-action on precognitive input, holds rather than burns actions, and made the coldest correct call of the campaign in Session 9. In Session 14 he kept producing from inside a grab and made the failure call nobody else wanted to make. In Session 15 he turned a failed Logic check into a structured, updated 24-hour forecast that named the warehouse before anyone else did.

SESSION 16 **holds at +8.5** Asked for a plan, he said he had none, then proposed the one the team used: teleport in and overwhelm one or two fast. His module confirmed the newcomer's target. **The best call of his fight was the quietest.** With Quasar-Force at −15 and Lock-Step unconscious, he moved Let's Go to the teammate who could teleport and healed him, and the extraction happened. The low-Health re-entry is the counterweight (1.5).

2 Edge +6.5

DEBUT · SESSION 16 The best tactical read in the pre-fight conversation came from the person who had been on the team for ten minutes: take the mind-controller first, because she "*can turn 5 vs 5 into 6 vs 4.*" Under fire he picked targets by threat, chose the device over a body when the device was the objective, and moved after shooting. **One session, and the read was right every time it was tested.**

3 Quasar-Force +6.0

ALL-TIME His read of what matters is often the best in the room. His read of what it will cost has failed twice on the record — the Session 8 crush and the Session 14 break from cover, which was the worst of his campaign. Session 15 had no fatal error: he refused the tentacle, proposed truth verification and kept evidence discipline. Against it, he escalated an argument about exterminating humanity with a being who could have acted on it.

SESSION 16 **+5.5 → +6.0 (+0.5)** The deductions were good: that the progeny had not yet given the five "*full access to any new powers*," and that the warehouse was "*probably the distraction they are staging.*" So was the self-preservation — hit to −5, he went to cover. **Against:** the villains had a plan for him specifically, built on his fame, his fragility and his preference for grappling, and he did not have one for that.

4 Intrepid +3.0

ALL-TIME He takes positioning guidance well and has visibly improved. He also committed a full action to a grab on a target whose force field had already negated a chain whip, and he still stomps rooms with ordinary humans in them. In Session 15 he took a cosmic officer's premise at face value and called for an attack before any facts were in.

SESSION 16 **holds at +3.0** "*Nothing, I guess*" for a plan. In the fight he took every assist offered and refused the one exit offered.

5 Lock-Step 0.0

ALL-TIME The old record — the blind teleport into ten monsters, the arson proposal, the captive beaten conscious, Berserk — has been climbing toward zero. The Session 14 healing hex was a cold, correct call. Session 15 held the best judgement sequence of his campaign, on Kwa, and then the Destined: a debt, and a private request to kill that Fade-Out can use against him for as long as he likes.

SESSION 16 **−0.5 → 0.0 (+0.5)** **Sound in action.** He pulled the downed healer out of the room, asked before moving anyone, and saved his last Focus for the last teammate. Against it, the pre-fight briefing he gave the newcomer was wrong on both facts it asserted. His first extraction also left him alone outside the building, where Blitzkrieg came out after him.

1.14 Justice League Vetting — Character & Conduct

Character side only; capability is 7.4. Scored as valence: +10 = would clear vetting and be championed by whoever sponsored him; 0 = nothing for or against; −10 = the record is disqualifying and reflects badly on the team that put him forward.

1 Oracle +8.5

ALL-TIME Exactly the profile a senior organisation wants. He reports honestly, defers to legitimate authority, refuses unethical instructions from peers, prioritises life over victory, and has generated no incident in sixteen sessions. **Session 14 added the entry a panel values most and sees least: he made the failure call himself.** Session 15's silence is the one line a panel might mark for follow-up.

SESSION 16 **holds at +8.5** A panel would find a fight conducted entirely in Focus damage and two teammates kept alive.

2 Quasar-Force +4.0

ALL-TIME His conduct would genuinely impress a panel: voluntary police cooperation, unprompted intelligence sharing, evidence discipline and an exemplary stay as the League's guest. **He is held below Oracle by an open fatality investigation**, and since Session 15 by a sentence no vetting officer reads past: a fourteen-year-old endorsing Fade-Out's "*full lethal fury.*"

SESSION 16 **holds at +4.0** The same file, plus "*murder hobos.*"

3 Edge +3.5

DEBUT · SESSION 16 Clean conduct, a League-adjacent sponsor in Black Canary, and a recruiter currently wearing the cowl. **A panel would ask one question first: the legend that he is a reborn weapon that cut down armies.** A clean first session does not answer it, and nothing in his conduct raises it.

4 Intrepid +2.0

ALL-TIME Clean, obedient and uncomplicated. A panel reading Session 14 would find a candidate who argued, in front of the sponsoring Justice Leaguer, that more information would not have helped, and framed the risk as being replaced. **That is not misconduct; it is a candidate talking himself down in the interview.** "*Not yet anyway*" is the counterweight.

SESSION 16 **holds at +2.0** Nothing a panel would weigh.

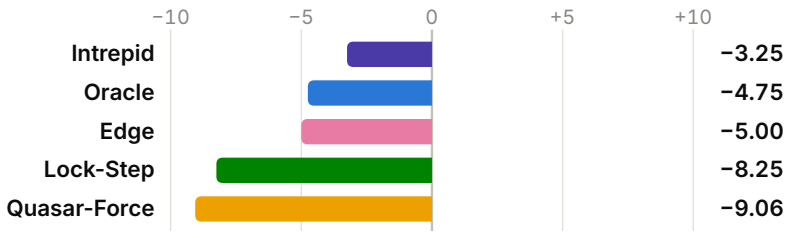

5 Lock-Step −8.5

ALL-TIME **The one file that is actively worse than no file.** Doctor Fate has publicly declared him a danger to the world. Beneath that are the sedations, the humiliated captive, the concealed artifact and two Berserk episodes; Session 14's lasso; and Session 15's two files — a species saved, a station livestreamed, juveniles shamed, a telepath invited into teammates' minds, and a killing solicited through a villain team.

SESSION 16 **holds at −8.5** Session 16 adds the best combat-conduct page in his file — consent asked, handcuffs offered twice and four teammates carried out. A panel would read it after the solicitation, which is still in a villain's memory.

SECTION 2 · 8 AXES · RISK −10.0 TO 0.0

§2 Enemy Risk

Section mean on the composite scale, −10…+10 (§10.1.3)

> NOTE **Session 16 is the first session in which a hostile force on the field was ordered to take the Titans themselves** — Blitzkrieg's "*my master's orders has changed to collecting you since you proved yourselves worthy*" and "*we need to collect these specimens*" — and the first in which villains explained, mid-fight, why they chose their first target. Both are scored in 2.2, the one axis that moved for all four returning members.

2.1 Vulnerability to Outside Subversion

(Position 1 = most vulnerable.)

1 Lock-Step −10.0

ALL-TIME The only member with a **confirmed, completed hostile operation** run against him: a temporal artifact purpose-built to lure him, profile him, transmit his data to an unknown recipient and brick itself. Around it sit the recruitment attempts, the three-way pull between Doctor Fate, Zatanna and Constantine, the Chaotic / Supernatural / Hounded tags, and a power source that may have been made from a piece of him. For most of the campaign Ego 20 and Protection Hex shut the psychic route, and his vector was biographical and social. **Session 15 opened every front at once.** The progenitor entered his mind "*with ease even with his protection hex up*" — the first logged entry past the Hex — and then read his memories with his consent, coming out knowing about portal travel, the Grey Lanterns and his first name. A cosmic order tested him without warning and put a ring on him that he cannot charge until he remembers an oath. The Destined hold a debt, and Fade-Out holds his private, verbatim request to have a detainee killed, which Fade-Out received as an endorsement ("*About time you stepped up the leadership*"). Three outside parties ran operations on him in one session, which is what the −10.0 anchor describes: *maximal, operations already underway.*

SESSION 16 **holds at −10.0 (the floor)** Nothing new was run on him and nothing was closed. The briefing said the warehouse was trafficking something keyed to his time manipulation, and the brood spent the fight searching crates for it; that is targeting, and it is scored in 2.2. VOLATILE Nobody knows what the device did, and Edge destroyed it.

2 Quasar-Force −9.5

ALL-TIME The strongest structural case in the document. An alien intelligence with a damaged personality, residual Apokoliptian corruption, its own survival drive and its own agenda lives inside his central nervous system and cannot be removed without killing him. OOC Built by New Genesis, rebuilt by Darkseid's scientists. Session 14 gave the threat a face, Azimuth standing over his unconscious body as an astral projection, and showed that the box tunes his emotional baseline by design and that a single image could override it. Session 15 answered two of the three findings in hardware: the circlet masks the New God signal Azimuth's search depends on, and Uncanny 3 raises every mental defence (Vigilance 18, Ego 20, Logic 20) and adds Focus damage reduction 3. He also raised the Azimuth memory himself under a telepath's read, and the box did not panic. What remains is still the second-worst profile on the board. The League's specialist cannot see where he ends and the box begins, the Grey Lantern's verdict is "*no longer merely human*," and he still answers whoever asks politely. **The mask hides the signal and does nothing about his manner.**

SESSION 16 **holds at −9.5** The Session 15 hardware had its first hostile test, and passed. Blood Blade's Swipe, which steals a power on a hit, landed a Marvel for 38 and then failed "*against his fortified mind.*" Swipe is a power thief, not a telepath, so this confirms the mitigation rather than extending it. The same attack worked on Intrepid later in the fight.

3 Oracle −7.0

ALL-TIME His cybernetics are a STAR Labs product he did not build and cannot fully audit, described in his own notes as a *Bio-Symbiotic Mutation Core, Host 'WADE' — Initiated & Maintaining*: the language of a relationship, not a prosthesis. In Session 12 something wrote into his predictive module, his own diagnostics reported no intrusion and no telepathy, and **the channel has never been fixed.** His Ego defence of 10 is the softest door on the roster. Session 15 put a telepath inside: the progenitor read his intent to hunt it ("*then you come to hunt us. I see it in your mind*"), with no roll or defence recorded. The module also "*did not adapt well*" to temporal transport, and it now resonates with Lock-Step's time-altering powers, which ties his cognition to a phenomenon nobody fully understands. What protects him is character: no divided loyalties, no factions courting him, and nothing hidden.

SESSION 16 **holds at −7.0** The fight contained a telepath with some mind control, and no attempt on any Titan's mind is recorded. Argent was the team's agreed first target; Oracle's opening super-Marvel stunned her, Quasar-Force grabbed her, and Lock-Step knocked her out inside the first round. Dragonborne turned Oracle's Return Fire back onto a teammate, which is a counter to his mechanics (2.2), not a way into his head.

4 Edge −5.5

DEBUT · SESSION 16 Three routes, none yet used.

- **Psychic.** Mental defences of 15 to 16, with Uncanny 2 and Focus damage reduction 2: better than Oracle's Ego 10 and Intrepid's Vigilance 14, well short of the two members at the top.
- **Biographical.** The widest route he has. His backstory is a legend that he is an ancient monster reborn, one that "*cut down armies*" and whose true name is lost. His powers arrived with constant headaches and eyes that glow, and his narrative profile says he is still deciding whether he gets to be Murphy King or has to be the monster. **Whoever arrives claiming to know what he is has a route nobody else on the team offers.**
- **Social.** He is the newest member, he met his teammates minutes before the fight, and his strongest attachments are outside the team, to Black Canary and the Birds of Prey.

Against all of it, nobody is known to be courting him, and his first session was clean. VOLATILE If the legend is literal, this is the axis it moves first.

5 Intrepid −3.0

ALL-TIME Least vulnerable, and it is a genuine virtue rather than an absence: a mutant origin, no technology, no artifacts, no patrons, no factions, no secrets from the team, Iron Will, and the only Secret Identity on the active roster. His levers are personal and he named them himself: the fear of hurting people and, since Session 14, the fear of being replaced. **Mental defence was always going to be the way in**, and Session 15 proved it when the progenitor pulled him into its network with a 14-Marvel against his Vigilance of 14, and he could not shake it for the rest of the day. The same session gave him a new lever: a time traveller, a hive mind and a viral stream all called him Superman, and he answered "*Not yet anyway.*"

SESSION 16 **−2.5 → −3.0 (−0.5, exposure up) The first Titan to have a power taken from him.** The Swipe that failed against Quasar-Force's fortified mind succeeded against him and stole Sturdy 3, so he lost his damage reduction mid-fight and Blood Blade gained it. He got it back only when an Edge-assisted Smash stunned her and broke her concentration. That is two sessions and two different hostile powers getting into him. He stays last because nobody is working on him; what is now proved is that anyone who tries can get in.

2.2 Target Priority for Hostile Organizations

(Lex-Corp, the Destined, the Marrow Syndicate, STAR Labs' leadership, the Breeder and its brood, and Apokolips-adjacent interests. Position 1 = highest priority target.)

1 Quasar-Force −10.0

ALL-TIME At once the **evidence engine**, the **object of study** and **the quarry.**

- **The evidence engine.** He built the case tying Lex-Corp to human experimentation, holds three redundant archives, runs the drone fleet and has made a statement on the record. In Session 15 he built the shield that shuts the Destined out of the Titans' floors of the tower, traced the limousine to STAR Labs' CFO, and kept the only evidentiary account against the organisation that holds the Breeder ("*we had more evidence before than we do now*").
- **The object of study.** He is New Genesis technology with a public face, a known father at STAR Labs, 60 Health, no healing factor and the build of an eleven-year-old. Doctor Varga wants him in a laboratory, the Prodigy breeder called this team *excellent progeny*, and a week of livestreamed workbench footage advertised his hardware to anyone watching.
- **The quarry.** A New God who defected from New Genesis to Apokolips is searching for the object fused to his nervous system. OOC Taleria's reading is that Azimuth's experiment failed and the merge with Endo completed it — "*it wasn't his success, it was hers.*" The circlet lowered the price of the quarry role in Session 15, and nothing else did.

SESSION 16 **−9.5 → −10.0 (−0.5, exposure up) A hostile team arrived with a doctrine for him, and said so.** Two of the brood opened on him in the Marvel round: Dragonborne missed, and Blood Blade hit for 38 and then 27 and put him at −5. Later, in their own words, they explained the choice: his fame, his known fragility, and his preference for grappling, which they called the thing most damaging to their tactics. In Round 3 Blitzkrieg's glitch bomb, which ignores damage reduction, put him at −30, the deepest knockdown on his file. Then the controller's orders changed to collecting the whole team. **His fame, his fragility and his fighting style are now an enemy's stated reasons, with an operation attached.** That is the floor.

2 Lock-Step −8.0

ALL-TIME Someone spent a purpose-built temporal artifact on him, which is a demonstrated willingness to invest. Add the magical factions and the Marrow Syndicate's willingness to talk to him specifically, and he is a person several organisations have concluded is worth the money. Session 15 supplied the reason — his powers are time-altering and lantern-derived — and tied the old operation to a new one. Oracle's module put the five infected teenagers on course for the mob warehouse where his time device had been found and used as a lure, and he had just made himself the public antagonist of those same five, zooming in on their faces for his followers.

SESSION 16 **−7.5 → −8.0 (−0.5, exposure up)** The forecast was right about the warehouse, and the briefing said what was in it: illicit materials, including something keyed to his time manipulation. The brood spent the fight searching crates for it. Dragonborne threw the crate that held it, and Blitzkrieg had the device in her hand and was phasing for the wall when Edge shot it apart. **The same Marrow Syndicate warehouse has now twice held hardware built around his powers.** VOLATILE What the device did, and who wanted it, is unknown, and the device no longer exists. Then the order came to collect the team.

3 Oracle −4.5

ALL-TIME STAR Labs cybernetics are worth reverse-engineering, and the predictive module is a standing tactical nuisance to anyone fighting the Titans. In Session 13 it located an invisible attacker nobody else could find, and he shot her; on Day 56 it named the enemy's destination before the enemy reached it. Session 14 showed the counter: Ecliptica held him in a grab and drained him from 180 Focus to 3 without ever beating his defences. That lowered the market price, and it is scored in 6.4. He is less publicly indexed than the two above, which is the main reason he is not higher.

SESSION 16 **−4.0 → −4.5 (−0.5, exposure up)** **The brood planned around him.** In Round 2 Dragonborne teleported into the middle of the team and hit Oracle and Intrepid together for 72 each — the healer and the biggest body in one action. When Oracle's Return Fire triggered, Dragonborne's reaction turned it onto Lock-Step. Two of his tools were answered inside one action, and he was on the floor at −2. The collection order covers him too.

4 Edge −4.0

DEBUT · SESSION 16 He was on nobody's list when the session began, and he ended it as the member who cost the brood its objective: he shot the device out of Blitzkrieg's hand and destroyed it. Blitzkrieg spoke the collection order while attacking him, and in the hand-waved ending he was one of the two Titans she could not carry out. Behind that sits a Monster origin that any organisation that studies metahumans would want a sample of. His identity is public but, in his own entry, "*not very well known*," and that is what keeps him below Oracle for now.

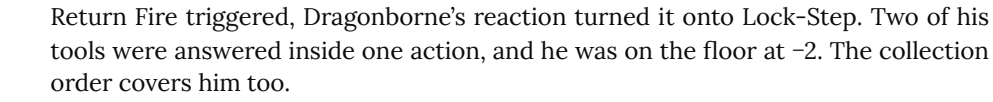

5 Intrepid −3.0

ALL-TIME A problem to be solved on the battlefield, not a target to be acquired: a Secret Identity, no technology, no unique intelligence and nothing to steal. Organisations planned *around* him rather than *for* him until Session 15, when a viral stream called him "*maybe the next Superman*" in a campaign where Lex-Corp is an active hostile organisation. OOC The time traveller's premise opened with green kryptonite "*headed for you, Superman.*"

SESSION 16 **−2.5 → −3.0 (−0.5, exposure up)** **He is the Titan the brood came closest to taking.** He ended the fight unconscious at −49, and the standing order was to collect specimens. The hand-waved ending gives two reasons Blitzkrieg withdrew without him: he weighs over 300 pounds, and Lock-Step's Force-infused whip can hit her while she is phased. Lock-Step went back for him on the last of his Focus. His mass did what his Secret Identity always did and made him expensive to acquire. **The order covers him anyway.**

NOTE *Lobo is still deliberately excluded.* He is hunting Shein Qua, not a Titan, and Wonder Woman took the engagement personally. Session 16 does not mention him. The team briefed Wonder Woman after the fight, and nothing she said back is logged.

2.3 Target Priority for Amanda Waller — Squad Value

Position 1 = highest priority as a Squad conscript.

(Waller has already appeared in-fiction — Session 6, Argus Station: she moved Shadow-Boxer to Belle Reve and pointed Quasar-Force at Project Catalyst.)

This axis asks one narrow question: who does she put in a harness? A deniable field slot on Task Force X, with a bomb in the neck, sent somewhere she cannot be seen to have sent anyone. The criteria are fit, not value — coercible, expendable, quiet enough that nobody makes noise if they don't come back, and morally flexible enough to do what's asked. **Everything else she might want from these five is scored separately in 2.4.**

1 Lock-Step −9.0

ALL-TIME The textbook profile, and nothing else on the roster is close. He is powerful, chaotic, and morally flexible enough to sedate a teammate and humiliate a restrained prisoner. **He has no parents, so nobody files the missing-persons report.** He moves comfortably through a criminal-adjacent social network, and he carries a documented misconduct file she could use without inventing anything. His near-immunity to mental coercion is not a deterrent but a *specification*: she reaches for a bomb rather than a leash, which she prefers anyway. Session 15 produced the most Squad-relevant item any Titan has: a killing commissioned by proxy, deniably and through a villain team, "*so we could technically keep our hands clean.*" That is Task Force X's operating model, and he designed it himself under a 24-hour clock. **The one thing keeping him off the floor is that he is no longer quiet**: a viral stream, an audience and a named best friend mean somebody would notice if he stopped posting.

SESSION 16 **holds at −9.0** In the field he was the opposite of his file. He offered handcuffs twice before swinging, insisted on knock-outs because "*Nightwing did say we can bring them back*," and asked a teammate's permission before teleporting him. **None of that is visible from where she sits.** What she would read is the Session 15 commission, which he mentioned again in passing as "*that other team's problem.*"

2 Edge −6.0

DEBUT · SESSION 16 **The closest skill fit on the roster.** A dedicated marksman with Accuracy 4, a signature Stopping Power, Double Tap and Suppressive Fire is the Squad's oldest archetype. Add a Monster origin, a legend about a creature that "*cut down armies*," a power that slices through objects by concentration, and an identity that is public but "*not very well known.*" OOC In at least one recent continuity Waller runs a squad made entirely of monsters. What keeps him behind Lock-Step is the handle and the noise. He has no record, no debts and no misconduct file, and his mentor is Black Canary, which puts the Birds of Prey and a League-adjacent hero one phone call from the harness. **He fits the slot; he does not yet fit the leash.**

3 Quasar-Force −5.0

ALL-TIME **A Squad slot is the worst possible use of him.** The homicide on file is real leverage and his power is obvious. Against it, he is the most photographed hero in Blüdhaven, publicly identified, reads as eleven, and has parents in Slate Hill who would go to every camera in the state. **Burning a cultivated asset to fill a field slot is bad tradecraft, and she knows it.** The stated ethic about killing acquired a footnote in Session 15 — "*we would be more comfortable unleashing Fade-Out with his full lethal fury on the controller*" — and a Waller file would quote that sentence in full.

SESSION 16 **holds at −5.0** He referred to the Destined in passing as "*the murder hobos*" sent "*after the bad progenitor.*" The file already holds the sentence that matters, and this one adds nothing to it.

4 Intrepid −3.0

ALL-TIME A Secret Identity is genuine deniability — there is no public figure to be missed — and he is by a wide margin the most physically survivable person on the team, which matters on operations where attrition is the point. He takes orders without argument. What keeps him low is that Waller can buy muscle anywhere, and he offers her no handle: no record, no debts, no secrets from his own team. A telepath opened him with a 14-Marvel in Session 15, which means she could use a leash rather than a bomb.

SESSION 16 **holds at −3.0** Blood Blade's Swipe went through the same door as the Session 15 telepath. That is vulnerability, scored in 2.1; she still has nothing to hold over him.

5 Oracle −2.0

ALL-TIME **The worst Squad fit on the roster.** He has a spotless record, no leverage of any kind, an Extreme Appearance that makes him unmistakable on any operation, and a STAR Labs provenance that guarantees institutional questions. Decisively, he has an instinct to report irregularities to Nightwing at once, including when a teammate begged him not to. Handed a total operational failure in Session 14, his first action was to ring the sponsoring authority and report it. She would get one conversation with him, and Batman would know about it that evening.

SESSION 16 **holds at −2.0** Nothing new. The team briefed Wonder Woman the same afternoon.

2.4 Target Priority for Amanda Waller — Strategic Interest

(Everything that is not a field slot: asset cultivation, informant recruitment, containment files, laboratory interest, and leverage held in reserve. Position 1 = highest priority.)

1 Quasar-Force −9.5

ALL-TIME She has already tasked him once: the Project Catalyst nudge at Argus Station used a fourteen-year-old as an unpaid intelligence asset, and she got away with it. He is New Genesis technology bonded to a compliant minor and the best technical mind in Blüdhaven. She can reach his parents, his identity is public, an accidental homicide sits on file, and he gives information freely to anyone polite. Session 14 added a New God hunting him, Justice League protection at the Watchtower and a League specialist building him countermeasures; **an asset that an intergalactic-tier adversary wants is worth a great deal more than the asset itself.** Session 15 added three builds ARGUS would want the specifications for before it wanted the builder: a device that masks a New God signature, a teleport shield that "*will learn and adapt other teleportation methodologies*," and a nanosuit upgraded with a League specialist. Too visible to strap a bomb to; perfect to *cultivate*. **It is the most valuable file in this document.**

SESSION 16 **holds at −9.5** The file did not grow. A hostile team targeted him first for his fame, his fragility and his grappling, which is a combat finding rather than a new reason to want him.

2 Oracle −7.5

ALL-TIME **Second because of Precognition.** A sixteen-year-old who sees twenty-four hours ahead is worth more to a planning cell than any brawler she could conscript, and the module has shown it can *receive* as well as forecast — the difference between a weather report and a conversation. The STAR Labs cybernetics are a second interest: the specifications, the failure modes and the name of whoever authorised implanting them in a minor. He is compliant with legitimate authority, so she can approach him through channels, which is cheaper than leverage. Session 15 produced his most operationally useful forecast — a probability, an actor, a destination and a collision window, updated live — and showed the module resonating with Lock-Step's time-altering powers. **A STAR Labs implant that reads time-wave phenomena is exactly what a planning cell would want dissected.**

SESSION 16 **holds at −7.5** The module worked all afternoon as a tactical instrument — a Marvel on initiative, a recommendation on whom to take first, a stomp steered onto the right target — and produced no new class of capability.

3 Lock-Step −7.0

ALL-TIME Until Session 15 he was a poor investment for anything but a harness: chaotic, unsupervisable, and carrying magical entanglements that would bring Fate, Zatanna and Constantine to her door. Her interest was containment — knowing where he is. **Session 15 made him three things she collects.**

- **A cosmic-order asset.** He is a designated Grey Lantern successor wearing a Grey Lantern ring. OOC Time powers are on the GM's ban list, which makes a time-coded fifteen-year-old a containment priority in any version of ARGUS.
- **An informant.** He has a working relationship with the Destined, and he owes them.
- **A public voice.** He administers the team's social media, every member's channel included.

SESSION 16 **holds at −7.0** A Marrow Syndicate warehouse was found trafficking a device keyed to his time manipulation. For ARGUS that is third-party confirmation of a containment case it had already opened, and it is already priced in. VOLATILE If the device's purpose comes out, this is the axis it lands on.

4 Edge −6.0

DEBUT · SESSION 16 **A containment file before he is anything else.** A Monster-origin fifteen-year-old whose legend says he is an ancient creature reborn, who can slice through objects by concentrating, and whose powers arrived with chronic headaches and eyes that glow, is exactly the profile ARGUS opens a laboratory file on. He brings a second asset — the team's best ranged shot — and a route through Black Canary to the Birds of Prey, a network she would rather watch than fight. **He sits below Lock-Step because nobody has yet confirmed what the legend is.**

5 Intrepid −2.5

ALL-TIME A mutant physiology file and nothing more, held above zero only because ARGUS keeps files on metas as a matter of routine. A viral stream calling a sixteen-year-old "*the next Superman*" (Session 15) is the sort of claim ARGUS opens a file on.

SESSION 16 **holds at −2.5** Nothing new.

2.5 Susceptibility to Enemy Legal & Bureaucratic Action

(Position 1 = most exposed. Lex-Corp's counsel is already engaged: a cease-and-desist is on record, a wrongful-death threat is circulating via the deceased's uncle, and Nightwing operates under the Batman mantle with correspondingly higher scrutiny.)

1 Quasar-Force −9.5

ALL-TIME Not close. **He caused a death**, gave a statement to police, is publicly identified, is the named custodian of contested evidence, and argued statutory law with a Lex-Corp attorney while unqualified to do so. He is a minor, which makes his parents the real defendants and his statements easy to characterise as unreliable. A "science advocate" is already seeding the press with a chemical-exposure, diminished-control narrative. He is not *a* legal exposure for this team; he is *the* case.

SESSION 16 **holds at −9.5** He crushed Stote unconscious inside a telekinetic grab. Every Titan used force on the five under the rule Lock-Step stated ("*knock them out*"), and nothing in the log takes his use outside it.

2 Lock-Step −8.5

ALL-TIME A defence attorney's gift. He sedated a fourteen-year-old teammate twice — an assault, with a witness who refused to take part — and humiliated a restrained captive while another teammate objected on the record. He breaks and enters habitually and concealed evidence from his own mentor. He has an income, a weekly stipend on a debit card issued by Iron-Side, which means a payer, a payment record, a bank relationship and an unanswered employment-law question about a fifteen-year-old. Session 15 added the largest movement on any risk axis that revision (−3.0, to −8.0):

- **Solicitation.** He asked a villain team to break into a research facility and kill a detainee in its custody, and clarified the request in private. If the Destined act on it, he is an accessory before the fact, and the witness to the request is someone who can sell it.
- **The five teenagers.** He broadcast the faces of five recently released sixteen- and seventeen-year-olds with captions implying they were reoffending ("*They did their time. What do they do? They go back and do more crime*"), when they had done nothing, and added *#SomeKidsJustNeedAWhooping*.
- **The STAR Labs employee.** He broadcast her face and her vehicle's movements.
- **The Watchtower.** He livestreamed the interior of a Justice League facility.

He was the member who once said out loud that this team needs lawyers. He is now the member who most needs one.

SESSION 16 **−8.0 → −8.5 (−0.5, exposure up) He met the teenagers he had published, and handcuffed one of them.** Argent is one of the five. He offered her the cuffs, she began to accept before her controller reasserted itself, and he knocked her out with 84 damage and a second strike and cuffed her. When the team withdrew, the hand-wave left "*the unconscious villains*" behind in a Marrow Syndicate warehouse, Argent among them, still cuffed. **A minor he publicly accused of reoffending, then knocked unconscious and left restrained in a crime syndicate's building, is the next exhibit.** The conduct was defensible — the offer came first, and the force was the agreed non-lethal standard — but this axis scores the paperwork. If the Destined act on his Session 15 request, the solicitation will sit beside it.

3 Intrepid −2.5

ALL-TIME Ground-Shaking Stomp discharged into rooms containing ordinary humans is a mass tort waiting for one bad roll, and he has come within a hair of it three times. There is no casualty, no public identity and no assets, so his exposure is entirely prospective.

SESSION 16 **holds at −2.5** He stomped once, in a warehouse holding only the enemy, with Oracle's module steering it, and it reached Dragonborne and nobody else. The tort stays prospective.

4 Edge −2.0

DEBUT · SESSION 16 Little on file. He is fifteen, his identity is public but "*not very well known*," and he has no record. The one incident in his backstory is an assault near him that ended with the attacker's weapon sliced to pieces. His first session added the fight's standard use of force against the five — one Stopping Power put 101 into Stote in a single action — and one piece of property destroyed: the device, which was being stolen at the time. **What would make him a case is the lethal ceiling of a power that slices through objects by concentration**, and nothing in Session 16 came near it. He sits above Oracle because a public identity and a lethal-capable kit are prospective exposures Oracle does not carry.

5 Oracle −0.5

ALL-TIME The cleanest record on the team, and actively exculpatory for everyone else. He demands surrender before engaging, heals opponents who were trying to kill him, revived a man Intrepid nearly killed, and attempted to revive the man Quasar-Force killed. In Session 14 he produced the most useful thing a witness can produce: a contemporaneous report of a loss, made voluntarily to the principal, on the night. **If this team is ever deposed, Oracle is the defence's best witness.** NOTE He was present for the Day 56 planning; a deposition would ask him what he heard, and his answer would help nobody on his own side.

SESSION 16 **holds at −0.5** He used Suppressive Fire on minors under someone else's control, and every point of it was Focus damage, not Health. He again sat through references to the Destined errand ("*murder hobos*," "*that other team's problem*") without comment, which is the Session 15 deposition question asked a second time.

2.6 Personal Leverage / Exploitability

What an adversary can hold over this person specifically. Position 1 = most exploitable.

1 Quasar-Force −9.5

ALL-TIME Every category at once: parents at a known address, a public identity, an accidental death on record, an artifact fused to his nervous system that cannot be removed without killing him, and a habit of answering honestly whoever asks politely. **He is fourteen, so leverage on him is leverage on his family and the reverse.** Session 14 found the most precise lever: shown a pencil sketch of Azimuth, he went into a passed-through panic attack and spent five minutes curled up on an infirmary bed. Session 15 weakened it — he raised the trauma himself under a telepath's read and the box held — and added a lever of a different kind. The entity inside him has a name, and he loves her: "*second mother*," "*Stella*," "*It's two people's home*." **Leverage on one of them is now visibly leverage on both.**

SESSION 16 **holds at −9.5** Nothing new was put in anyone's hands. What the brood showed — that his fame tells an enemy how fragile he is — is targeting, scored in 2.2.

2 Lock-Step −8.5

ALL-TIME A misconduct file that would end him with every authority figure in his life, and magical entanglements pulling three ways. For a long time he was insulated by having nothing to seize. Session 13's stipend and the truthful account extracted under the Lasso of Truth in Session 14 chipped at that, and Session 15 removed it. **A villain holds his private request to have someone killed, in his own words, and he knows it** — the most direct handle anyone in this document has held on a Titan. Around it:

- **What he owes.** A favour to the Destined.
- **What he could lose.** A public audience, a reputation he is actively building, and a named best friend with a public profile.
- **Who knows him.** At least one outside party knows him as "*Eric Williams, known as the Gray Lantern of Earth*."
- **What he wants.** A ring he cannot charge and a succession he very much wants.

SESSION 16 **holds at −8.5** He gave a stranger his grievances in his first minute with him — Iron-Side "*lived in the security room*," the adults "*just suck*" — and then described exactly what he lacks: adults "*actually being helpful*." That is a lever stated out loud, but he said it to a teammate, not an adversary.

3 Edge −4.0

DEBUT · SESSION 16 Three levers, all on the sheet or in the backstory.

- **The identity question.** Anyone who claims to know what the monster is, or how to stop the headaches, is offering something he has wanted since the powers arrived.
- **The people.** Black Canary, who volunteered to train him, and the Birds of Prey behind her. His family is not described.
- **The obligations.** School, with grades that were "*already bad*" before the powers, and a public identity.

Against them: no record, no debts, and nothing known to be concealed from the team.

4 Oracle −3.0

ALL-TIME A clean record, no divided loyalties and nothing concealed. The one lever that seemed to fit him — a voice inside his own head presenting as a frightened sixteen-year-old and asking to be saved — was tested under the worst available conditions and did not move him. What remains is structural rather than active: cybernetics he did not build and cannot fully audit, the weakest mental defence on the team, and a proven route into his cognition that a less honest occupant could use.

SESSION 16 **holds at −3.0** Nothing new. FLAG Edge's roster tags include *Mentor (PC: Oracle)*, which would make the newcomer someone Oracle is responsible for. Edge's backstory reads as Barbara Gordon ("*she called the Birds*"), and nothing in Session 16 shows the two had met. Not scored.

5 Intrepid −2.0

ALL-TIME A Secret Identity, no assets, no factions and no secrets from his own side. His levers are personal and he supplied them himself: the fear of hurting people, which requires finding him first; the fear of being replaced (Session 14); and an ambition, "*Not yet anyway*" (Session 15), which is an offer waiting for somebody to make it.

SESSION 16 **holds at −2.0** He refused an extraction under fire, which is scored in 1.12. It gives an adversary nothing new to hold.

2.7 Value to Enemy as Hostage / Leverage

How much would be surrendered to get this person back. Position 1 = most valuable to hold.

1 Quasar-Force −9.5

ALL-TIME The team would give up almost anything, and so would several institutions. He is fourteen, presents as eleven, is universally liked, and carries New Genesis technology that Batman, STAR Labs and ARGUS each have separate interests in. Holding him now means negotiating with six parties: the team, his parents, the Justice League (Wonder Woman came to the tower within minutes for a stranger's problem), Guy Gardner, Doctor Taleria, and Azimuth. **Nobody on this roster is worth more alive.**

SESSION 16 **holds at −9.5** The brood's first two attacks of the fight went at him, and its orders later changed to collecting the team. Holding him is the outcome this axis prices, and Session 16 showed somebody trying for it.

2 Oracle −7.0

ALL-TIME Taking Oracle removes the team's entire recovery capability as well as a person, and he is the most trusted and best-liked member, so any ransom put to this team would be paid. Session 14 ran the scale model without anyone having to take him: Ecliptica held him in place and emptied him, and the team's only casualty stayed down until a chaos mage improvised a heal. Session 15 added the forecast; the team spent Day 56 planning around his percentages.

SESSION 16 **holds at −7.0** **The scale model ran again, at full size.** While Oracle was down at −2, nobody healed anybody. When he came back, he spent the rest of the fight keeping Quasar-Force and then Lock-Step on their feet with Let's Go, and he healed both afterwards. Every recovery the team made in Session 16 went through him.

3 Lock-Step −6.0

ALL-TIME No family to ransom and a damaged relationship with his own side, which until Session 15 was nearly the whole entry. What raised him was external: Doctor Fate, Zatanna and Constantine all hold positions on him, which makes him a bargaining chip in negotiations he is not party to. Session 15 added parties who would pay: a time-travelling order that designated him a successor, the people of Kwa who owe their existence to him, and a team that now runs on his decisions. **Part of the price of holding him is Grey Lantern attention, and nobody knows what that costs.**

SESSION 16 **holds at −6.0** He was the team's way out. He teleported Oracle into Argent's sphere and then out of the building unconscious, and at the end he extracted all four teammates on the last of his Focus. Taking him would have left the other four in the warehouse, and that is scored in 3.3 and 4.9. The price to his outside parties is unchanged.

4 Edge −5.0

DEBUT · SESSION 16 The team has known him for an afternoon, so its own attachment is new. **The value comes from outside.** Black Canary volunteered to train him, which brings the Birds of Prey and a League-adjacent hero to the table, and Nightwing, operating as Batman, recruited him personally. An enemy holding him would be negotiating with the Bat-family and the Birds as well as the team, which is more institutional weight than Intrepid carries.

5 Intrepid −4.0

ALL-TIME Universally liked and institutionally invisible. The team would come for him; nobody else would. After Session 15 his audience would come for him too, which is not the same as anybody paying.

SESSION 16 **holds at −4.0** The team did come for him: Lock-Step went back in on the last of his Focus. That is the whole of the price, and it was paid on the day.

2.8 Consequence Severity in the Event of Compromise

Conditional severity, not likelihood — how bad is it if this person defects, is mind-controlled, or is turned by leverage. Position 1 = worst outcome.

1 Quasar-Force −10.0

ALL-TIME **The worst single scenario in the campaign.** Psyche ran the scale model twice across Sessions 12 and 13, the second time to completion, bringing down the main containment field on the Celestial Core with his own telekinesis. A compromised Quasar-Force delivers the complete Lex-Corp evidence chain, three redundant archives, the drone fleet and its codes, access to three laboratories and the team's operational picture. It also delivers a body that can lift cruise-ship tonnage without a check, wrapped around an Apokoliptian-modified intelligence with its own agenda. Since Session 14 the compromise surface has been one hybrid, and only half of it is a fourteen-year-old. Session 15 added the tower's teleport shield to the payload, and the device that hides him from Azimuth, which a compromised Quasar-Force could simply take off.

SESSION 16 **holds at −10.0 (the floor)** Nothing in Session 16 changed the payload.

2 Lock-Step −9.0

ALL-TIME Teleport Together means a compromised Lock-Step can put anything anywhere, including inside the tower, past every wall the team owns. Berserk has shown what he does without restraint, and Doctor Fate's stated objection is that his chaotic nature is a danger on a scale larger than Blüdhaven. Session 15 added a ring of unknown capability and a time-coded power source, a detailed knowledge of the Watchtower guest floor, and the team's entire public voice. **A compromised Lock-Step controls how the public sees the others.** He also showed that when rushed he will order a killing through intermediaries.

SESSION 16 **holds at −9.0** Session 16 demonstrated the first sentence. He put Oracle inside Argent's force-field sphere, carried an unconscious teammate out of the building, and moved the whole team out of a hostile building one at a time. **The same power, turned, puts an enemy where the team sleeps.**

3 Edge −7.5

DEBUT · SESSION 16 **Third on arrival, and the reason is the legend.** Mechanically, a turned Edge is the team's best ranged shot — Agility damage ×7+7, Accuracy 4, a signature Stopping Power that put 101 into one target in one action — with a healing factor, Slow-Motion Dodge, and the only Heightened Senses on the active roster. He lives in the tower, in the bedroom that was Exemplar II's. Behind the kit is a power that slices through objects by concentration, a roster title, *The Reborn Calamity*, and a backstory about an ancient monster that "*cut down armies.*" **If the legend is literal, the severity is not the kit but what the kit is attached to.** VOLATILE He ranks above Oracle because Oracle's payload is information and recovery, and Edge's is lethality.

4 Oracle −6.5

ALL-TIME Underrated and severe. A turned Oracle hands the enemy **twenty-four hours of precognitive lookahead and a perfect eidetic record of everything this team has ever done or discussed**, then heals the people fighting it. The channel into his module is proven and unrepaired. What keeps him below the members above is auditability: the one demonstrated write came with an identifiable author who could be — and was — questioned about it afterwards. A telepath got into his mind in Session 15, which moved the likelihood in 2.1, not the payload.

SESSION 16 **holds at −6.5** The payload is unchanged. Session 16 showed how much of the team's survival runs through his healing (2.7); a turned Oracle would withhold that as well as use everything else.

5 Intrepid −6.0

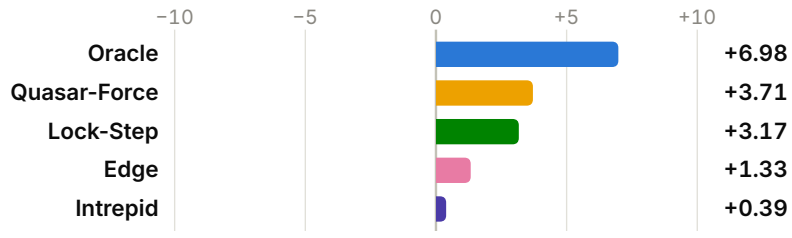

ALL-TIME A hostile Intrepid is a containment problem this team cannot solve with the tools it fields. He has 210 Health, DR 3, Healing Factor 7, Immovable, and an indiscriminate area attack. The Rank 3.5 advance widened the gap, and Session 15 showed that the door into him is mental.

SESSION 16 **holds at −6.0** Session 16 ran a partial version of the problem. Blood Blade took his Sturdy 3, used it against him and put him down; Dragonborne, a flying brick on the other side, hit him for 72 and then put him down for 60. **The team spent the afternoon unable to put down the one enemy built like him**, and Dragonborne left demoralised, not beaten. A turned Intrepid would be that problem with 210 Health and a healing factor.

Read this axis against 2.1. Among the returning four, Session 16 changed neither ordering. Lock-Step and Quasar-Force are first and second on likelihood and second and first on severity, so the two most dangerous people to lose are still the two most likely to be taken. Edge enters fourth on likelihood and third on severity. **He is not especially likely to be taken; what a taker would get is the open question**, and it is the same question his narrative profile says he has not yet answered: Murphy King or the monster.

SECTION 3 · 9 AXES · VALENCE 3.1–3.5 · MAGNITUDE 3.6–3.9

§3 Team Internals

Section mean on the composite scale, −10…+10 (§10.1.3)

3.1 Internal Reputation with Teammates

VALENCE −10.0 TO +10.0

1 Oracle +9.0

ALL-TIME Universally trusted, and it is earned rather than granted. He feeds the team, heals it and keeps his word, and what actually generates respect is that he declines to do the wrong thing even when a teammate with more social pull asks him to. Lock-Step still comes to him for help *after* being refused, which is the clearest signal available. In Session 14 Quasar-Force named him first among the teammates he wanted at the Watchtower. In Session 15 Lock-Step took him — "*my boy*" — into first contact as the one person who could keep the scout alive, and the room turned to him when it ran out of ideas ("*Oracle, You got anything?*"). The one public jab came on Lock-Step's stream: "*the guy that always tells us what we do wrong and tries to fix it, but you know, sometimes, it just doesn't work.*" **That is the joke you make about the person whose judgement you depend on.**

SESSION 16 **holds at +9.0** The jab became a title. When the newcomer asked whether there was a plan, Lock-Step answered for the team: "*Oracle is our plan guy.*" Oracle's own answer was "*No plan. Not on this one,*" and a few minutes later the team adopted his teleport ambush anyway. Already at the top of the band.

2 Quasar-Force +8.0

ALL-TIME Genuinely loved. Oracle calls him the only sane person in the group and cooks around his appetite, and Lock-Step, leaving the city once, asked *him* to look in on his friends. Session 14 rendered the affection as logistics: the team carried him home unconscious, Iron-Side sat with him through the night, and Lock-Step spent Focus he did not have to wake him. **The discount is structural:** the team talks to him as a pre-teen. Session 15 raised the intellectual respect ("*it's not like they have smarter people. We have Quasar-Force*"; to a villain, "*That's our smarts*") and, for the first time, put an open question on the table about who is speaking when he speaks: "*Quasar, like what are you? Are you human or are you mother box?*" High affection, capped authority, and a new doubt.

SESSION 16 **holds at +8.0** The discount was spoken aloud to the newcomer: "*you see that kid that looks like he is like 12 right there? They just told him to fix it.*" So was the correction, by Quasar-Force himself: "*You're mainly the one that told me to fix it.*" The question about the box did not come up.

3 Intrepid +6.5

ALL-TIME No enemies, no complaints, no friction. He plays video games with Lock-Step, takes hits for everyone and goes along with team decisions cheerfully. He is well liked, and nobody defers to him about anything. Session 14 was the first time a teammate went after him rather than around him — Lock-Step called him a coward and would not let it go — and Intrepid escalated back, which nobody had seen him do. Session 15 reversed it in public: "*Sorry, Intrepid. I will never doubt you again,*" and to the stream, "*this guy is going to be Superman.*"

SESSION 16 **holds at +6.5** Lock-Step offered him an extraction under fire, he refused it, and Lock-Step respected the refusal and came back for him at the end. **The teammate who called him a coward in Session 14 asked his permission in Session 16.** That is regard, and it is already priced at this level.

4 Edge +5.5

DEBUT · SESSION 16 Welcomed before he had done anything — "*Oh, thank god, finally, we get somebody competent*" — and then he earned it in order: the target call the team adopted, two decisive assists to Intrepid, the shot that destroyed the device, and a round alone against Blitzkrieg so that Lock-Step could get the others out. He asked the two questions the team had not asked itself ("*Do we have a plan for when we enter this place?*" and "*Can you tell me the situation, please?*"), and his reply to Oracle's briefing — "*Ok, that told me nothing*" — is the kind of line a room keeps. **The regard is real, and it is an afternoon old.**

5 Lock-Step +5.0

ALL-TIME Split into two accounts that don't reconcile. **Professional regard is high and still rising.** He held combat discipline for four consecutive engagements, took direction from four teammates in one fight, configured a hex into healing hands to wake the casualty in Session 14, and in Session 15 led the team and was followed (Oracle: "*I'll follow your lead*"; Quasar-Force: "*Lock-Step is blessed*"). **Character regard is damaged**, and the file behind it is long: the sedations, the humiliated prisoner, the concealed artifact, the fight with Intrepid over the word *coward* in front of Wonder Woman, and the lasso session. Session 15 added the use of every teammate as stream content, talking over Oracle on camera, pressing Quasar-Force to accept a bodily intrusion, and asking a telepath to link two teammates' minds without asking them. The disapproval showed only in behaviour: Quasar-Force disagreed with him three times and won each time.

SESSION 16 **+4.5 → +5.0 (+0.5)** The professional account moved again. He knocked out the mind-controller after offering her the cuffs, teleported Oracle into her sphere, carried the unconscious Oracle out of the building mid-fight, asked Intrepid before teleporting him, and at the end extracted all four teammates on the last of his Focus. The character account added two wrong claims in front of the newcomer. Quasar-Force corrected one to his face ("*You're mainly the one that told me to fix it*"), and the GM contradicted the other — "*they didn't even fill him in*" — by revealing that Nightwing had briefed Edge. There was also one line aimed at his own side: "*This is what happens when I stay with the team. I should have vanished.*" **The team has more reason to value him than it did, and the same reasons to discount him.**

3.2 Internal Influence with Teammates

VALENCE −10.0 TO +10.0

1 Lock-Step +8.5

ALL-TIME Raw, demonstrated influence. He moved the entire team to a party none of them wanted to attend, decided the artifact would go in the vault, and made the surrender ritual de facto team doctrine. He teleports people out of combat without asking, and the team argues afterwards rather than stopping him. Inside the Justice League's own station in Session 14 he assigned work and people, and all of it happened. Session 15 was the most complete demonstration of influence in the document: three teammates opened the Kwa scene ready to fight, and he turned all three to *talk first*; on Day 56 he hosted the refugee, called in the Destined, gave them their task and split the remaining work. **Groups follow whoever acts, and he acts.** The limit also has a name: Quasar-Force disagreed with him three times in Session 15 — on the tentacle, the shield and the plan to take over the hive — and won every time.

SESSION 16 **+9.0 → +8.5 (−0.5) He set the chair down himself.** Asked for a plan by the newcomer, he pointed at Oracle — "*Oracle is our plan guy. I'm just the if it all goes to hell… that's my element*" — and the plan came from Oracle and Edge. His influence showed in the rule of engagement, where his correction of Oracle's garbled line ("*Nope, nope, Nightwing did say we can bring them back, so knock them out*") became the standard, and in the exit, which he ran. It also met a refusal: he offered Intrepid an extraction, and Intrepid said no. **He asked rather than told, which is to his credit in 1.5 and costs him here.** Still first.

2 Oracle +7.5

ALL-TIME His moral and logistical influence became directive influence several sessions ago and has stayed there. He calls Lock-Step in when he needs him, tells the team not to discuss internal matters in front of the Destined, called Nightwing about the artifact knowing how Lock-Step would react, rescued a briefing somebody else was losing, and answered for the whole team when Nightwing asked how it was doing. In Session 14 he said the team should be resting more, and the team rested. In Session 15 his forecast set the room's reading of the situation, and he handed direction to someone else explicitly for the only time on record ("*I'll follow your lead*").

SESSION 16 **+7.0 → +7.5 (+0.5)** The room turned to him for the plan, and after "*No plan. Not on this one,*" he supplied one: a teleport ambush to overwhelm one or two of the five quickly. The team adopted it with Edge's choice of target, which his module endorsed ("*Mind control bad, yeah*"). In the fight his Let's Go decided who stayed on their feet, and he moved it from Quasar-Force to Lock-Step at the moment the extraction needed it. **He takes second back from Quasar-Force on score, not on a tie-break.**

3 Quasar-Force +7.0

ALL-TIME Substantial and self-limited. His analysis sets the targets, his intelligence sets the plans, and he assigns roles; Session 13 produced the first two orders he ever gave inside a fight, both obeyed without discussion. His influence is strongest where it is technical and weakest where it is social, and he rarely spends it against a teammate. When he does, it works. In Session 14 he turned a personal invitation from Wonder Woman into a team invitation. In Session 15 he set the order of work at the Watchtower, kept the tower shield up and refused the tentacle against the de facto leader, handled the team's calls to the League, and cast the vote that brought in the Destined ("*I say get them involved*"). **He beat the de facto leader in direct disagreement three times in one session, without raising his voice.**

SESSION 16 **holds at +7.0** He shaped the plan without authoring it. His drones found the five spread through the warehouse searching crates, and his deduction that the progeny had not yet given them full access to their new powers set the team's expectations. His sneaky-entry proposal lost to Oracle's ambush. He corrected Lock-Step on the facts, to his face, and it cost him nothing.

4 Edge +5.0

DEBUT · SESSION 16 **Influence within minutes of arriving.** Minutes after meeting the team he named the first target and the reason — Argent first, because a mind-controller "*can turn 5 vs 5 into 6 vs 4*" — and the plan was built around it. He also made the team answer the two questions it had skipped, a plan and a situation report. One adopted call is not standing, and it was ratified by Oracle's module rather than won in argument, which is why he starts here and not higher.

5 Intrepid +1.0

ALL-TIME "*Will go with any team decision.*" He once offered to squeeze objects until they break as his contribution to a security discussion. Charming, and not persuasive. In Session 14 he stated his own preference, to stay behind, and reversed it four times in one conversation under one teammate's single word. In Session 15, asked for an idea, he said "*I got nothing.*"

SESSION 16 **holds at +1.0** Asked whether there was a plan: "*Nothing, I guess.*" Asked by Lock-Step whether he would stay out if teleported clear, he said no, and stayed. **It is the first time on record that his answer to Lock-Step stood**, but it was a decision about himself, so it is scored in 1.12 rather than here.

3.3 Internal Trust / Reliance

VALENCE −10.0 TO +10.0

Not affection — who the team actually depends on.

1 Oracle +9.0

ALL-TIME Everyone relies on him for something they cannot do without: healing, food, honest reporting, and the medic station holding. He is the only member whose absence would change every other member's day. Session 14 showed what his absence looks like without his being absent: held immobile at 3 Focus and unable to heal the casualty, he left the team to improvise a replacement inside an hour. In Session 15 the Kwa plan attached him to the scout because he is the one who keeps people on their feet, and on Day 56 the team planned around his percentages.

SESSION 16 **holds at +9.0** **The reliance ran the whole fight.** Every recovery in Session 16 went through him: Let's Go kept Quasar-Force conscious, then moved to Lock-Step for the extraction, and he healed both afterwards. He was also the only teammate Lock-Step pulled out mid-fight. Already at the top of the band.

2 Quasar-Force +8.0

ALL-TIME The team routes intelligence, analysis, tactical calls and evidence custody through him without discussion. Session 14 showed the reliance surviving his worst session: with him unconscious, Lock-Step spent Focus he did not have to wake him, because the team needed him working. **You do not spend your last resource waking somebody you can do without.** Session 15 closed the one recorded reservation — the tower is teleport-shielded, and the shield held against the Destined — and ran most of the team's outward-facing work through him. Lock-Step's instructions to him were requests for things only he could do.

SESSION 16 **holds at +8.0** The drones were the team's eyes before the door opened, and his deduction about the progeny's powers was the team's intelligence. In the fight he was down in the first exchange and out for the last four rounds, and the team kept him within range of Let's Go rather than let him go. The reliance is unchanged; his availability is scored in 4.1.

3 Intrepid +6.5

ALL-TIME Relied upon absolutely for exactly one thing: nobody worries about whether Intrepid will be where the damage is. In Session 14 his tools failed him for the first time — Crushing Grip did nothing against a force field, and a stun took him out of the last two rounds — and nobody blamed him, which is itself the reliance. In Session 15 he tailed the limousine by air without being asked twice.

SESSION 16 **holds at +6.5** He was where the damage was — 72 and 60 from Dragonborne, 37 and 43 from Blood Blade, and his Sturdy stolen — and he refused to be moved out of it. The reliance is exactly what it was.

4 Lock-Step +5.5

ALL-TIME Professionally indispensable and personally unreliable, and the team behaves accordingly: they hand him negotiations and then discuss him behind his back. **Oracle went around him to Nightwing once and would do it again.** The professional half has improved sharply since Session 13. In Session 14 he became the only person other than Oracle who has ever restored another person's Health. In Session 15 the team relied on him to lead, and on Kwa that was the right bet. His personal reliability is still the problem: he slept through class, didn't pay attention in briefings, livestreamed without asking and linked two teammates to a hive mind, and part of the team's security came to rest on a favour he owes to villains.

SESSION 16 **+4.5 → +5.5 (+1.0)** **The team's way out was him, and it worked.** He moved Oracle into Argent's sphere, carried the unconscious Oracle out of the building in Round 2, offered Intrepid an exit and respected the refusal. In the hand-waved ending he got all four teammates out: Oracle and Quasar-Force while Edge held off Blitzkrieg, then Edge, then a last trip back for Intrepid on almost the last of his Focus. **The team relied on him for the way out, and he delivered all of it.** The personal half did not change: two of his pre-fight claims were wrong, and the Destined favour is still outstanding.

5 Edge +5.0

DEBUT · SESSION 16 The team had known him for minutes, and by the end it was relying on him for the exit. He held off Blitzkrieg alone for a round so the extraction could happen, assisted two of Intrepid's attacks — turning one of them from a miss into a Marvel — and destroyed the device that was the brood's objective. **The trust was earned in one fight and has not yet been tested by anything else** — a briefing, a disagreement, or a quiet week.

3.4 Team Cohesion Contribution

VALENCE −10.0 TO +10.0

1 Oracle +9.0

ALL-TIME He is the reason this is a household rather than a group of people in a building. Breakfast is timed around who wakes when and adjusted on request, and the medic station is also the place people end up talking. In Session 14, in a room full of people blaming a Justice Leaguer, he was the one who said out loud that she had admitted the mistake was hers, and that this counted for something. In Session 15 he supplied the session's one moment of pure levity: "*I'm Batman! Wait, no, I'm Batman!*"

SESSION 16 **holds at +9.0** To a newcomer who had just been told the adults were all trash, his first words were "*Don't worry, the bar is low, it's alright.*" After the fight he healed the teammates he had kept upright. The standing contribution is unchanged.

2 Quasar-Force +7.5

ALL-TIME Universally liked; he thanks people constantly and defuses rather than escalates. He absorbed the discovery that he had been drugged without turning it into a war. **He is the person nobody on this team wants to be in conflict with.** In Session 14 he spent that capital on the group for the first time, getting a personal sanctuary widened into a team invitation. In Session 15 he celebrated a teammate's honour with more enthusiasm than the teammate ("*Oh she called you a grey lantern!*"), spent his own deduction to help Lock-Step recall the oath, built him two drones, and disagreed with the most socially dominant person on the team three times without a moment of friction.

SESSION 16 **+7.0 → +7.5 (+0.5)** **He drew out the most honest thing Lock-Step has ever said about himself.** Against a run of "*Adults just suck,*" he answered: "*I like being hopeful. I want to help people get their happy thoughts back. You are not keeping your happy thoughts anymore.*" Lock-Step replied with the first explanation of his own cynicism on record — "*Once I get that back, I think I'll be a bright-eyed kid just like you... But until then, this is me*" — and Quasar-Force's answer to that was a yacht party. He also corrected Lock-Step's version of who had told him to fix things without any friction at all.

3 Intrepid +5.0

ALL-TIME No friction with anyone. He plays video games with Lock-Step, takes the hits, and never sulks about a decision going the other way. The only friction on his file came in Session 14 and was defensive: called a coward, he jabbed back at Lock-Step for always teleporting out of combat, retreated into "*he was just joking,*" and went anyway, to protect people. In Session 15 he laughed at the jokes, backed the scout and caused no friction. His cohesion is passive and reliable.

SESSION 16 **holds at +5.0** He agreed with Lock-Step's welcome ("*Yeah*"), caused no friction, and declined an exit without making it an argument.

4 Edge +4.5

DEBUT · SESSION 16 A good first afternoon. He met a complaint about adults with tact ("*I don't want to break your hope,*" "*I'm sorry to hear that*"), asked for a plan and a situation report without making anyone look bad for lacking one, and gave Oracle's apocalyptic briefing the reply it deserved without starting anything. In the fight he backed two of a teammate's attacks, turned one of them from a miss into a Marvel, and covered everyone's exit. **No friction, and nothing yet that binds the group**; one afternoon is not a household.

5 Lock-Step +3.5

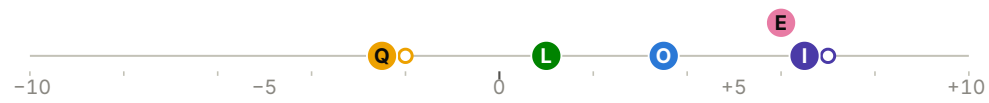

ALL-TIME **The team's largest source of both morale and conflict.** He brings the popcorn, the licorice, the parties and the video games, and he got everybody paid. In Session 14 he healed the casualty when nobody else could, and the same evening escalated a teammate's private self-criticism into a challenge to his manhood in front of an outside authority. Session 15 was mostly morale — he publicly elevated Intrepid, built a channel for every member, held a team huddle and called for "*a group discussion*" for the first time — against talking over Oracle on a stream, using Quasar-Force as content, pressing a bodily intrusion, linking two teammates' minds, and bringing the Destined, who have embarrassed this team before, into the tower as allies with a debt attached. **The morale he generates is real and has always come with a bill, and part of the bill is now owed to villains.**

SESSION 16 **holds at +3.5** Both columns grew. **For:** a warm welcome to the newcomer, the first explanation of himself he has given a teammate, a consent question in the middle of a fight, and the extraction. **Against:** the newcomer's first minute on the team was spent hearing that "*all the adults are trash,*" that Iron-Side "*lived in the security room,*" and a version of the team's history that Quasar-Force had to correct. Mid-fight he blamed the team for his own position ("*This is what happens when I stay with the team. I should have vanished*"). They balance.

3.5 Low Operational Support Burden

VALENCE −10.0 TO +10.0

What the team spends to keep this person in the field: gear, medical draw, money, transport, cover maintenance, and consequence cleanup. **Not** *how sustainably they occupy the role (1.3) and* **not** *how stable their private life is (1.7) — this is the squad's logistics bill. High = cheap to field, or a net contributor.*

1 Intrepid +6.5

ALL-TIME He costs almost nothing. He absorbs the worst punishment on the team and then repairs it himself, with no technology, no artifacts, no patrons and no consumables, and his Secret Identity maintains itself by simply not being spent. **He is the cheapest sustained combat capability this team fields.** The Rank 3.5 advance (Session 15) gave him 210 Health, H-DR 3, F-DR 1 and Healing Factor 7, and with Exemplar II gone he became the cheapest member outright.

SESSION 16 **+7.0 → +6.5 (−0.5) This time, he cost an extraction.** He went down twice, the second time to −49, and the hand-waved ending says Blitzkrieg could not carry him out; Lock-Step went back for him on almost the last of his Focus. His healing factor did the rest. He is still first, by half a point.

2 Edge +6.0

DEBUT · SESSION 16 **The second-cheapest member on arrival.** He heals himself — he came back from exactly 0 on his own healing factor — uses no technology, and his iconic weapon is Constructible, so the team keeps no armoury for him. His training is paid for by Black Canary and his recruitment was done by Nightwing. Against that, he is fifteen with a School obligation and grades that were "*already bad*," he lives in the tower, and his legend is a cleanup item nobody has priced. **Cheap to field; not yet a net contributor.**

3 Oracle +3.5

ALL-TIME Low draw and real overhead. He is the medic, so he never consumes medical support, and he heals himself. Against that, he has **no mobility power at all**, his cybernetics are a STAR Labs maintenance dependency he did not build, and Extreme Appearance means errands that need an unremarkable face fall to someone else. Session 14 exposed what the cost structure hides: drained to 3 Focus, he needed twelve hours of dedicated sleep to reach 75 of 180, and for that whole period the team had no recovery capability of any kind. **The bill for Oracle is rarely money and never medicine. It is time, and it arrives all at once.** In Session 15 the module failed under temporal transport and recovered without intervention.

SESSION 16 **holds at +3.5** He was knocked out by 72 physical damage, was up a round later on his own healing factor, and finished the fight with enough left to heal two teammates. The time bill was not presented. The mobility bill was: Lock-Step moved him into the fight's key position and later carried him out of the building.

4 Lock-Step +1.0

ALL-TIME **Cheap to field and expensive to keep.** He supplies his own transport, summons his own weapon, has no address to maintain and no civilian identity that needs cover. The bill arrives elsewhere. At 60 Health with H-DR 0 (1 under the Hex) he is a heavy medical draw whenever anything lands, and his conduct generates cleanup the team pays for. Session 15 made him more expensive to keep than he had ever been: a favour owed to the Destined, publicity the others have to live with, posts shaming five teenagers, and an unchanged medical draw. **He saved the team a fight on Kwa and ran up a tab at home.**

SESSION 16 **holds at +1.0** The draw arrived exactly as described. One glitch bomb took him from 60 to −24, and Oracle healed him back up. He then paid in more than anyone, extracting all four teammates. The Destined favour is still outstanding, and the five teenagers he published are now three unconscious in a mob warehouse and two at large.

5 Quasar-Force −2.5

ALL-TIME The largest medical draw on the roster: 60 Health and no healing of his own after fifteen sessions. The −12 in Session 14, from full Health in a single action, cost a surgical extraction, an overnight watch, most of Lock-Step's remaining Focus, a League medical robot, a sedative and twelve hours of mandated sleep. He needs a drone fleet with a charging rotation, laboratory access at three sites, and imposed structure to keep him eating and sleeping, and his public identity and legal exposure are standing costs. Session 15 ran the bill the other way (+1.5): Sturdy 3 and Uncanny 3 for damage reduction on both tracks, a signal mask so the team no longer relocates around him, a teleport shield for the Titans' floors, and two drones built for a teammate.

SESSION 16 **−2.0 → −2.5 (−0.5) The hardware did not stop the draw.** He went to −5 in the opening exchange, spent Karma to reach 13, and was kept conscious by Let's Go. Then a glitch bomb, which ignores damage reduction, put him at −30. Oracle put 15 Health into him mid-fight knowing it would not bring him back, kept him within range of Let's Go, and healed him to consciousness afterwards. **The medic spent more of the fight on him than on anyone else.**

NOTE *The anchor is half-restored.* (The Session 15 edition's note on this axis was cut off mid-sentence; this replaces it.) Exemplar II, first here in Session 14, was the only net contributor this axis has had — self-funded, self-housed and self-healing — and the four he left behind are all costs, ordered by how large a cost each one is. Edge arrives second at +6.0: self-healing and self-armed, with his training paid for by someone else, but housed by the team and fifteen. **He is cheap, not free.** And in Session 16 the cheapest member cost an extraction.

3.6 Command Chair — External Appointment

MAGNITUDE 0.0 TO 10.0

(Who Nightwing, Batman, Iron-Side, or the League would install.)

1 Oracle 8.5

ALL-TIME The obvious appointment. He is sixteen, mature, medically indispensable and already Nightwing's most reliable channel. He will report honestly against a teammate's wishes and complies with imposed structure. He also carries **Precognition, precisely the power an appointing authority wants sitting in a field-leader's chair.** When Nightwing needed a Titan in a room with a STAR Labs CFO, he arranged it for Oracle, and in Session 14, when the operation failed, Oracle was the one who rang the client; appointing authorities select for people who report losses without being asked. Session 15 added his best forecast. VOLATILE A time traveller from Kwa looked at the team and saw Batman in him. That is not an appointment; it is recorded because another of her identifications, Lock-Step as a lantern, turned out to be literally true within the hour.

SESSION 16 **holds at 8.5** No authority appointed anybody. NOTE The one external act of Session 16 did not go through him: Nightwing, operating as Batman, recruited the newcomer and briefed him on the five villains, and the team did not know. It reads as a recruiter briefing his recruit rather than a change of channel, and it is not scored.

2 Quasar-Force 3.5

ALL-TIME Strong indicators and hard blockers. He is the historical primary Nightwing correspondent, the evidence custodian, the one who cites conduct policy from memory, and the team's point of contact with the League; when Lock-Step asked who the smartest person in the Justice League was, Wonder Woman pointed at him. The blockers have nothing to do with competence. He is fourteen and presents as eleven, an open fatality investigation is unresolved, and OOC an Apokoliptian-modified intelligence is bonded to his brain with a New God hunting it. Session 15 added a Grey Lantern calling him "*no longer merely human*" in front of the team, and his endorsement of lethal force by proxy on the record. **Being the person an institution protects is close to the opposite of being the person it puts in charge.**

SESSION 16 **holds at 3.5** Nothing moved. A hostile team now opens on him first, which is a reason for institutions to protect him, not to install him.

3 Edge 2.0

DEBUT · SESSION 16 **The only member an outside authority chose for anything this revision** — Nightwing, as Batman, recruited and briefed him — but the appointment was to the team, not to its chair. He is fifteen, an afternoon into the job, and has Logic −1. His mentor is Black Canary, whose opinion would carry weight with the League. He sits just above Intrepid on the strength of the briefing and the first-day call.

4 Intrepid 1.5

ALL-TIME Brave and reliable, with no command indicators: Logic 0, no communications role, and no questions when Nightwing invited them. In Session 14 he argued, in front of the sponsoring Justice Leaguer, that nothing could have been done better. A time traveller's Superman reading in Session 15 is a matter of fame, scored in §8, not of anyone's appointment.

SESSION 16 **holds at 1.5** Nothing moved.

5 Lock-Step 1.0

ALL-TIME He has told Iron-Side to her face that her school is fake, told the room that Nightwing can't be trusted with their security, tried to conceal a dangerous artifact from him and sedated a minor teammate. In Session 14 he named the organisational failure a League founder then conceded, and he was also put in the Lasso of Truth by that founder. In Session 15 an external order did appoint him — to the succession of a Grey Lantern, the first time an outside order has chosen him for anything — but none of the authorities this axis lists would do the same. Iron-Side pinched him for not listening in briefings, the Watchtower was livestreamed without anyone being asked, and the person who praised his leadership was Fade-Out. **The one institution that chose him is not one his mentors can see.**

SESSION 16 **holds at 1.0** His opening statement to the newcomer was a case against every authority on this list: the adults are "*trash*," Iron-Side "*lived in the security room*," the League should be helping, and Nightwing "*didn't even fill him in*" — which was wrong. Nothing in it would change an appointing authority's mind, and nothing he did in the fight would reach one.

3.7 Command Chair — Internal Emergence

MAGNITUDE 0.0 TO 10.0

(Who the team converges on without anyone appointing anybody. Iron-Side deliberately declines to appoint a leader or impose a chain of command, so this path is currently the live one.)

1 Lock-Step 8.0

ALL-TIME **Emergence follows initiative, and nobody else on this team reliably supplies it.** Even inside the Justice League's station in Session 14 he was the one assigning work and allocating people. His authority has a known weakness: it decays with absence, as it did across Sessions 12 and 13. In Session 15 the team converged on him from the first minute to the last — the approach on Kwa, the

Watchtower huddle and stream, and on Day 56 the host who put the question to Iron-Side, brought in the Destined and split the work — with Oracle's *"I'll follow your lead"* and Fade-Out's *"About time you stepped up the leadership."* Under pressure he governs by decree (*"we don't have the time to be democratic"*), and the one teammate who argued with him on the merits won all three times.

SESSION 16 **8.5 → 8.0 (−0.5)** **He handed the plan to Oracle in front of the newcomer**: *"Oracle is our plan guy. I'm just the if it all goes to hell… that's my element."* What he kept was the part he named. Once it went to hell he ran it: the cuffs offered twice, Oracle moved into the sphere, the consent question (*"Who is comfortable where they are at and who wants to move a little bit"*), and the whole extraction. **Still the team's emergent leader in a crisis, and by his own description no longer its planner.**

2 Oracle 7.0

ALL-TIME The default in a crisis. He is the one who says surrender first, holds the line at the medic station and shuts down loose talk in front of enemies. Across two sessions without a leader in the room he simply *was* the team lead, and for four revisions this document said that if Lock-Step drifts, Oracle inherits. His emergence has always been by gravity. Session 15 was the first session in which he explicitly handed the lead to someone else. OOC The player was overloaded.

SESSION 16 **6.5 → 7.0 (+0.5)** The room turned to him for the plan, by name, and he supplied one after first saying there wasn't one. His module ratified the newcomer's target, his opening shot executed it, and his Let's Go decided who was still standing at the end. **Nobody handed him the chair, but Lock-Step pointed at it.**

3 Quasar-Force 7.0

ALL-TIME In practice he sets objectives, deconflicts targets, manages the operational picture and holds the institutional memory of the conduct standard. His emergence is functional rather than social: the room follows his analysis without treating him as its leader. Session 13 was the first session in which his habit of hedging cracked. In Session 15 he passed Oracle: he set the order of work at the Watchtower, ran every external communication and made the security calls, and each time one of those collided with the leader's preference his view prevailed. He was still positioned as the little brother (*"Is she going to listen to you? Like no offense? We're like kids"*).

SESSION 16 **holds at 7.0** He did the intelligence work — the drone sweep and the deduction about the progeny's powers — and proposed a sneaky entry that the team did not take. Then he was the brood's first target and spent most of the fight down.

4 Edge 4.0

DEBUT · SESSION 16 On his first afternoon he asked the room for a plan, got "*No plan,*" and supplied the target. **The newcomer's call became the plan within minutes of his arrival**, ratified by Oracle's module. One call is not emergence, and he directed nobody in the fight; four is the credit for asking the right question and answering it.

5 Intrepid 2.0

ALL-TIME The roster notes that he tries to lead and is not always the right man for it. The attempts are visible and they don't land. In Session 14 he reversed his own stated position four times while somebody else's opinion did all the work, and in Session 15 he said *"I'm not really a thinker."*

SESSION 16 **holds at 2.5** *"Nothing, I guess."*

Closest call: Oracle over Quasar-Force on a tie at 7.0, broken on Session 16 evidence: the room turned to Oracle for the plan.

3.8 Command Chair — Overall

MAGNITUDE 0.0 TO 10.0

(Weighted toward emergence, since no appointment currently exists.)

1 Oracle 8.2

ALL-TIME The only member with no hard blocker on either path: first on appointment, and first in practice in every session the incumbent missed. At Session 14 his lead over second place was the third-widest first-to-second gap in the document. Session 15 took 0.2 off on the emergence figure alone, with Nightwing and Batman absent for a second straight session and Iron-Side and Wonder Woman present and appointing nobody.

SESSION 16 **8.0 → 8.2 (+0.2)** The emergence figure recovered: the team's emergent leader pointed at him for the plan, and the plan was his.

2 Lock-Step 5.1

ALL-TIME Dominant on emergence and disqualified on appointment. He holds the chair in all but name, and he remains the least likely person on the roster to be handed it. Session 15 was the first session in which holding the chair produced a result nobody else on the team could have produced (Kwa) and a decision nobody else would have made (the Destined).

SESSION 16 **5.2 → 5.1 (−0.1)** The tenth is the plan he handed over. He keeps second because in a crisis the room still moves when he does.

3 Quasar-Force 5.0

ALL-TIME Top-three on both paths and blocked on both for reasons that have nothing to do with capability: his age and presentation, the open fatality investigation, and OOC the box a New God is hunting. **He is the most likely person to be *running* the team while someone else *leads* it**, and Session 15 was the literal case.

SESSION 16 **holds at 5.0** Nothing moved.

4 Edge 2.5

DEBUT · SESSION 16 Third on appointment, fourth on emergence, and an afternoon into the job. The early signs are good — the right question, the right target, and a recruiter who briefed him personally — and there is not yet a record to weigh them against.

5 Intrepid 2.0

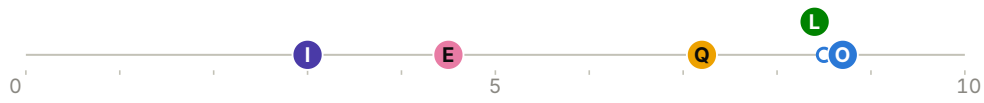

ALL-TIME Neither path is open to him, and he has not asked for either.

SESSION 16 **holds at 2.0** Nothing moved.

Volatile: Lock-Step over Quasar-Force by 0.1. **This is the third consecutive session without Nightwing on screen, and in this one he acted on the team from offscreen.** Operating as Batman, he recruited the newcomer and briefed him on the five villains, and the team did not know. After the fight the team briefed Wonder Woman, as it did in Session 15. NOTE The user's reading that Wonder Woman is becoming the team's mentor is still not GM-confirmed, and this document treats it as practice rather than declaration. **Two external authorities are now acting on this team, one through the front door and one through the newcomer, and neither has formalised a chain of command.**

3.9 Overall Pecking Order

MAGNITUDE 0.0 TO 10.0

1 Oracle 8.7

ALL-TIME The highest reputation, moral authority, indispensable support, and a willingness to overrule that has stopped being occasional. Nightwing routes through him, and the room defers to him when it is not arguing. Session 14 added two quiet markers: he made the failure call, and the youngest member asked for him by name. Session 15 added a public jab and an explicit deferral, and removed a distinction: he is no longer the only person on this team who has successfully told Lock-Step no.

SESSION 16 **8.5 → 8.7 (+0.2)** The jab became a job title — *"Oracle is our plan guy"* — from the person whose standing is closest to his, in front of the newcomer. He then took the hardest single hit of the fight, came back with *"Drop me again, it was worth it,"* and decided who was conscious at the end. **The gap to second widens from a tenth to three tenths.**

2 Lock-Step 8.4

ALL-TIME The highest raw influence on the team. He sets group direction, treats others' consent as negotiable and is not meaningfully checked for it. The ceiling has always been that the adults manage him rather than listen to him. Session 15 closed him to a tenth of first: he ran the session, carries a ring and is the team's public voice, while adults managed him (the pinch on the neck), a villain praised him, and a fourteen-year-old overruled him three times.

SESSION 16 **holds at 8.4** He ceded the plan and kept the crisis, and for the first time he asked a teammate before moving him, instead of treating consent as negotiable. **The standing is unchanged. The description of it — *"I'm just the if it all goes to hell"* — is his own, and it is new.**

3 Quasar-Force 7.2

ALL-TIME Indispensable capability and the team's actual brain, socially positioned as the little brother. Session 14 pushed both halves at once: a founding member of the Justice League offered him sanctuary, and he was carried home unconscious and summarised as *"a Quasar-Force type of thing."* In Session 15 he won all three of his disagreements with the leader, ran most of the team's external relationships and came home with three new pieces of hardware, while the room still talked about him as *"our smarts"* and asked whether he was human or mother box. **Value very high; status capped by the way the room talks to him.**

SESSION 16 **holds at 7.2** The cap was stated to the newcomer in so many words — *"that kid that looks like he is like 12"* — and he answered it himself, on the facts, without heat.

4 Edge 4.5

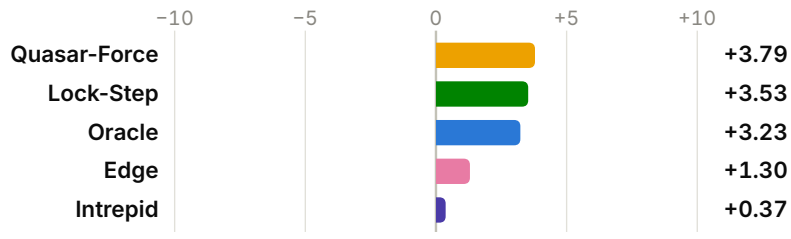

DEBUT · SESSION 16 **Ahead of Intrepid on his first afternoon.** He was greeted as *"somebody competent"* before he had done anything, and by the end of the fight his call had set the plan, his shot had ended the brood's objective, and his round alone against Blitzkrieg had made the extraction possible. Standing is not built in an afternoon, and he has not yet been in a room where the team disagreed.

5 Intrepid 3.0

ALL-TIME Beloved and essential in the line, and weightless in decisions. The only decision he made in Session 14 was reversed four times in one conversation, under one teammate's single word. In Session 15 he was publicly elevated (*"I will never doubt you again"*) and, ten days later, said *"I got nothing."*

SESSION 16 **holds at 3.0** The first decision on record that he held against Lock-Step — staying in the fight — was about himself. It counts in 1.12. It does not yet count here.

§4 Combat Power / Ability / Value

Section mean on the composite scale, −10…+10 (§10.1.3)

A note on this section this revision. **Session 16 is a full fight, seven rounds and a hand-waved ending, and the hardest the team has taken.** It is the first combat since Session 14, and every member went to 0 Health or below at least once:

- **Quasar-Force** twice: −5 in the opening exchange, kept up by Let's Go, and −30 in Round 3.
- **Oracle** once: −2 in Round 2, back up on his healing factor the next round.
- **Intrepid** twice: −3 in Round 4, back up on his healing factor the same round, and −49 in Round 6.
- **Lock-Step** once: one-shot from 60 to −24 in Round 4.
- **Edge** once: exactly 0 in Round 7, back up on his healing factor.

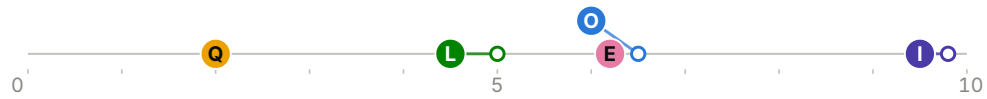

The opposition was five teenage villains carrying the Breeder's brood, under a controller's orders and fighting with what the log calls "*outstanding teamwork*":

- **Blitzkrieg:** phasing, teleporting, and glitch bombs that act as a ranged Disrupt Person and ignore damage reduction.
- **Argent:** telekinetic force fields, telepathy and some mind control.
- **Stote:** heightened senses, wall-crawling and electricity.
- **Blood Blade:** a magnetite weapon, explosive energy, and **Swipe**, which steals a power on a hit.
- **Dragonborne:** a flying brick with a damage-reflecting Counterstrike.

Argent, Stote and Blood Blade were knocked out and left in the warehouse. Dragonborne was demoralised and fled, Blitzkrieg withdrew on orders, and the device the brood came for was destroyed. No sheet changed except by Edge's arrival, so every Session 16 movement in this section comes from the fight. It was also the first test of several things this document has been carrying:

- **The Session 15 hardware.** Quasar-Force's fortified mind turned away Swipe; his Sturdy 3 was irrelevant against a glitch bomb.
- **The Session 14 counter-build against Oracle** (grab and drain) was not used. The brood beat him another way: 72 physical damage, and a reaction that turned his Return Fire onto a teammate.
- **The healing backup** (Lock-Step's hex-heal) was not needed. The monopoly carried the fight.
- **The Force whip** was never swung at a phaser. The hand-waved ending credits it as one reason Blitzkrieg withdrew. VOLATILE

4.1 Durability, Defense & Sustain — Health / Physical

1 Intrepid 9.5

ALL-TIME Best in every column: the largest Health pool on the team (210 since the Rank 3.5 advance), H-DR 3, physical defences of 20/20/20, a Healing Factor that returns 7 Health every turn, Immovable and Enduring Constitution. In Session 14 he took a Marvel-boosted area attack from an Olympian goddess in the chest and was upright the following round. **He is the only member who can absorb a bad round and simply keep standing.**

SESSION 16 **9.8 → 9.5 (−0.3) 290 damage by the log's count, more than his whole Health pool.** Dragonborne landed Marvels for 72 and 60, Blood Blade hit for 19, 17, 37 and 43, Blitzkrieg for 28, and Counterstrike returned 14 more. Swipe took his Sturdy 3 for two rounds, removing his damage reduction and the house-rule boost to his defences. He went down twice: to −3, up again on his own healing factor in the same round, and then to −49. He is still first by a distance. The three tenths are for the first fight in which the best body on the team was not enough to stay standing.

2 Edge 6.2

DEBUT · SESSION 16 90 Health, H-DR 2, physical defences of 19/19/15 from Evasion and Sturdy 2, a Healing Factor of 3, and **Slow-Motion Dodge**, a free reaction that puts trouble on any attack against his Agility defence. It worked three times in four: it evaded Argent's push-back, stripped the edge from a Dragonborne Marvel, and with a Karma point made a glitch bomb miss; it failed once, against Stote. He took 102 damage across the fight — 22 from Stote and glitch bombs for 37 and 43 that ignored his damage reduction — went down at exactly 0, and got up on his healing factor. **Ahead of Oracle's identical 90-point pool on two more points of physical defence and a dodge that works.**

3 Oracle 6.0

ALL-TIME 90 Health looks fragile and isn't. **Real Jinx imposes trouble on every direct attack against him, permanently**, stacked with H-DR 3, defences of 17/17/16, Charmed Life, Danger Sense, a Healing Factor of 3 a turn, and Healing Hands, which converts his own Focus into his own Health one for one. In Session 14 Ecliptica held him for most of the fight and never attacked his body: his physical durability was not beaten, it was declined. FLAG His two Rank 3.5 advances are undeclared, and anything they bought is not scored.

SESSION 16 **6.5 → 6.0 (−0.5) This time it was tested, and it lost.** Dragonborne hit him for 28 in Round 1 and then, teleporting into the middle of the team, landed a Marvel Banging Heads for 72. Real Jinx put trouble on both, and neither missed. He was down at −2. His healing factor got him up the next round, and he ran back into the warehouse on a sliver of Health. The ending was good, but it came from his healing, not his defences.

4 Lock-Step 4.5

ALL-TIME Feast or famine. Protection Hex routes everything to Ego 20, which is functionally unhittable against most opposition. When something does land, 60 Health with H-DR 0 (1 under the Hex) evaporates: Omega Grade took 75% in a single attack, and Dragonborne once left him at 10. His Healing Factor at Resilience 2 barely helps. **His best armour is discipline**, and in Session 14 he teleported out after every strike and finished the fight untouched. Melee 7 (Session 15) lifted his Melee defence to 17 without changing the famine.

SESSION 16 **5.0 → 4.5 (−0.5) The famine, in one roll.** He had done what his discipline says — struck and teleported clear — and was outside the warehouse when Blitzkrieg teleported out after him and threw a glitch bomb that ignores damage reduction. It rolled a Marvel-20 before edges and took him from 60 to −24 in a single attack, the worst single hit on his file. A teleporting phaser is the one opponent his discipline cannot outrun. Earlier, Dragonborne had also turned Oracle's Return Fire onto him for 13 Focus.

5 Quasar-Force 2.0

ALL-TIME 60 Health, no healing factor and no self-heal. He has finished sessions at 1, 4, −11 and −12 Health — the last from completely undamaged, in a single action, from an attacker nobody could locate. **There is no version of this axis where a character who can be removed from full to unconscious by one strike is not last.** What keeps him alive is a high Melee and Agility defence with Evasion, and the ability to simply not be within reach. Session 15 put Sturdy 3 in the nanosuit, for H-DR 3 and physical defences of 19/19/15.

SESSION 16 **holds at 2.0 Neither knockdown was decided by the Session 15 upgrade.** The brood opened on him. Dragonborne missed against "*great agility and augmented nanosuit*," and Blood Blade landed a Marvel for 38 and a reaction strike for 27 through his damage reduction, to −5. Kept up by Let's Go, he spent Karma to heal 18, went behind a shipping container and kept working. In Round 3 Blitzkrieg's glitch bomb, which ignores damage reduction, put him at −30, the deepest knockdown on his file; the log adds that "*Karma would be of no help, he hits before his edge.*"

Roadmap note: RULING Quasar-Force spent Rank 3.5 on Iconic Items, and the roster's house rule bans telekinetic or elemental protection alongside more than two levels of Sturdy, so with Sturdy 3 in the nanosuit Telekinetic Protection is closed to him. **Session 16 is the case for the other route.** His first knockdown came after damage reduction had done its work, and his second from an attack that ignores it. Energy Absorption, on the Rank 3→4 plan, is a reaction that converts Health damage — *after* damage reduction — into Focus, so it answers both. It remains the single highest-leverage purchase on the team's board.

4.2 Durability, Defense & Sustain — Focus / Mental

Focus pool, Focus damage reduction, mental defences, and demonstrated resistance to psychic attack.

1 Lock-Step 9.0

ALL-TIME The best demonstrated mental defence on the team. His Ego defence is 20 at baseline, and **Protection Hex routes every incoming attack and effect through it**, so there is no soft angle to attack. His F-DR 3 is tied for the highest on the team. Argent's mind control failed against him twice, and Dargrave's mind-read failed outright. The one crack is a 90 Focus pool that Omega Grade showed can be drained fast — and, since Session 15, the first logged entry past the Hex: the progenitor entered his mind "*with ease even with his protection hex up.*"

SESSION 16 **holds at 9.0** Argent was in the fight and made no recorded attempt on him; she was out inside the first round. The only Focus damage he took came from his own side — Oracle's Return Fire, redirected onto him by Dragonborne for 13.

2 Quasar-Force 8.8

ALL-TIME A 180 Focus pool, tied for the largest on the roster, and a record that cuts both ways: Viral catalogued his mind as very resilient after failing to get in, while Psyche made contact at will across Sessions 12 and 13. The Session 14 image was a big house with an unlocked door. Session 15 put a lock on it: the circlet's Uncanny 3 gives **Vigilance 18, Ego 20 via Integrity, Logic 20 and Focus damage reduction 3**, with "*mental defense fortification / augmentation to make it harder for enemy telepaths to mess with his mind*," at no Focus or action cost.

SESSION 16 **8.5 → 8.8 (+0.3) The lock held on its first test.** Blood Blade's Swipe, a power theft that rides on a hit, "*fails against his fortified mind.*" Later in the fight the same power stripped Intrepid's Sturdy. One test is not a record, which is why Lock-Step keeps first. *Closest call:* Lock-Step over Quasar-Force by 0.2, on demonstrated record against a specification that has now passed once.

3 Edge 5.5

DEBUT · SESSION 16 A middle profile: Focus 90, F-DR 2 from Uncanny 2, and mental defences of Vigilance 15, Ego 16 and Logic 16, with Wisdom covering his Logic of −1. Nothing in Session 16 attacked his mind. He has damage reduction on the track where the two members below him have none or one; he has neither the Hex nor the circlet of the two above.

4 Oracle 4.0

ALL-TIME The most lopsided profile in the section: Focus 180 and Vigilance 16 against **Ego defence 10** and F-DR 0. Session 14 emptied him without using the soft door — Ecliptica's elemental grab, four brain drains, 180 Focus down to 3. **F-DR 0 against a repeating drain is an open tap.** In Session 15 a telepath got in without visible effort ("*then you come to hunt us. I see it in your mind*"). His Ego defence is ten points below the two members at the top.

SESSION 16 **holds at 4.0** Nobody attacked his mind or drained his Focus. The counter-build was not used; the brood went through his body instead (4.1). FLAG Two advances are undeclared, and Uncanny would address this directly.

5 Intrepid 2.5

ALL-TIME Ego 11 and Logic 11 are the weakest pair of mental defences on the team, partly offset by Iron Will and Fearless, which are real mechanical resistances, and F-DR 1. He survives mental pressure by being stubborn rather than defended. In Session 14 an area attack stunned him for two consecutive rounds, and in Session 15 the progenitor pulled him into its network with a 14-Marvel against his Vigilance of 14: "*neither can kick it out of their minds for the rest of the day.*"

SESSION 16 **3.0 → 2.5 (−0.5) The first power ever taken from a Titan was his.** The Swipe that Quasar-Force's fortified mind turned away succeeded on him and stole Sturdy 3, and Blood Blade fought the next two rounds with his damage reduction. That is two sessions and two hostile powers getting in through the same side.

4.3 Stamina & Resource Efficiency

1 Intrepid 9.2

ALL-TIME 90 Focus and almost nothing to spend it on. Clobber, Banging Heads, Crushing Grip and Immovable are free; only Smash and Ground-Shaking Stomp cost. His Healing Factor returns 7 Health a turn against a 210-Health pool. He can fight all day, and does.

SESSION 16 **holds at 9.2** His healing factor took him from −3 to +4 in the same round, and he swung again; later it worked on him from −49 while he lay unconscious. Focus was never the constraint.

2 Edge 7.0

DEBUT · SESSION 16 **The cheapest kit on the team to run.** Suppressive Fire, Double Tap and Slow-Motion Dodge cost nothing, and only Stopping Power costs Focus, at 5. On a 90 Focus pool with a healing factor, he can shoot every round of any fight the team has had. Session 16 was seven rounds of exactly that: three Suppressive Fires, three Stopping Powers, and a dodge whenever one was needed. Second on arrival, behind a man with 210 Health and seven a turn.

3 Quasar-Force 6.5

ALL-TIME The largest Focus pool on the team at 180, driving a cheap core loop (Grab 5, Attack 5, Barrier 5, Crush 10). **His limiting resource isn't Focus, it's Health.** Session 14 was the purest demonstration, ending with a nearly full Focus pool and −12 Health. Session 15's F-DR 3 and Sturdy 3 protected both pools a little more. Energy Absorption, on the Rank 3→4 plan, would transform this axis outright.

SESSION 16 **holds at 6.5** The demonstration ran again: knocked out twice, never short of Focus.

4 Oracle 5.0

ALL-TIME 180 Focus, and he is the team's battery: every point of Healing Hands is a point of Focus, spent alongside Let's Go, Never Surrender, Return Fire and Precognition. In Session 9 he deliberately under-healed a teammate to keep reserves for a raid. Session 14 took the decision away from him: drained to 3 of 180 by an enemy reaction he could not escape, he could not restore a teammate at −12, and twelve hours of sleep returned him to 75. **An opponent worked out that draining him is worth more than hitting anyone.**

SESSION 16 **4.5 → 5.0 (+0.5) The battery lasted the fight.** He fired Suppressive Fire, which costs nothing, in seven of his eight turns. He ran Let's Go on Quasar-Force twice — from −5 in the opening exchange, and from Round 4 to the end — put 15 Health into him mid-fight, and moved Let's Go to Lock-Step for the extraction. After the fight he still had enough to heal Lock-Step twice and Quasar-Force to consciousness. Nobody drained him, so the counter is untested. What Session 16 showed is the budget holding under a medical load that put every member of the team below zero.

5 Lock-Step 2.5

ALL-TIME A 90-point pool, tied for the shallowest, against the hungriest demands: Protection Hex at 10, Powerful Hex at base cost plus 5, Chain Strikes at 5, and teleports at 10 to 15. F-DR 3 helps, but he is a sprinter. In Session 14 he ran himself dry on purpose, on somebody else's behalf. His ring has a charge he cannot yet refill — a second shallow pool rather than a deeper one.

SESSION 16 **holds at 2.5 The sprint, start to finish.** Blink, a Powerful Hex for Teleport Together, Chain Strikes in three different rounds, a teleport out with Oracle and a teleport back. After the fight Oracle had to heal him before he could teleport the others, and the last trip, for Intrepid, used "*just about the last of his focus.*" The pool was exactly as deep as the job and not a point deeper.

4.4 Crowd Control & Area Denial

1 Quasar-Force 9.0

ALL-TIME The most flexible controller by a distance. Telekinetic Barrier spans two spaces per rank, absorbs anything doing 10 or less indefinitely, and lets him choose which side of it a target ends up on. Telekinetic Grab has a **break-out target number of 20**, which most opponents cannot roll. He blocks doorways, escapes and lines of fire, and funnels enemies into the front line. Session 14 showed the ceiling: a barrier on a display case was beaten by a teleport gate opened *inside* the case. His answer, the tower shield (Session 15), is scored in 4.6.

SESSION 16 **holds at 9.0** From behind a shipping container on the far side of the warehouse, he grabbed Argent through a force field she raised against it, and she failed to break out with her own telekinetic strength. Later he pinned Dragonborne, who spent his last reaction of the round to escape. **The grab held the brood's first target in place until Lock-Step finished her.** He was then down for the last four rounds, and nobody else on the team controls anything.

2 Lock-Step 6.5

ALL-TIME Broad and inconsistent: ice control, paralysis riders on chain-whip hits, a Powerful Hex sleep effect that took Aegis-Girl out of a fight entirely, and Teleport Other for removing enemies or extracting allies. In Session 14 the whip's rider stunned Ecliptica and broke her grab on Oracle. The output depends on the hex configuration and the die.

SESSION 16 **holds at 6.5** He spent his hexes on movement rather than control; the one Powerful Hex of the fight put Oracle inside Argent's sphere. No rider effects are recorded.

3 Intrepid 5.5

ALL-TIME Denial by physics. Ground-Shaking Stomp prones everything within reach plus rank on a Fantastic, Banging Heads takes two, Crushing Grip holds one, and Immovable makes him a wall that cannot be repositioned.

SESSION 16 **holds at 5.5** Banging Heads took two at once and collapsed Argent's force field. He stayed in place when Argent's telekinetic sphere pushed Oracle out. His one Stomp reached only Dragonborne.

4 Oracle 5.0

ALL-TIME Zone control by threat rather than by physics. Suppressive Fire stuns on a Fantastic, Return Fire punishes anyone who declares against him, and his held overwatch actions have frozen reinforcements in a hallway. Session 14 was the counter-case: a man who denies ground by being dangerous to approach is worth very little once he has been grabbed.

SESSION 16 **4.5 → 5.0 (+0.5) The stuns landed.** His opening Suppressive Fire on Argent became a super-Marvel (6-1-6) through Charmed Life, for massive Focus damage and a stun. Dragonborne was stunned twice more, by a Marvel for 34 in Round 3 and by 17 in Round 5, and in Round 7, at 11 Focus, a 15-point hit demoralised him and he fled. **Suppressive Fire removed the brood's strongest body from the fight without beating its Health.**

5 Edge 4.0

DEBUT · SESSION 16 He carries the same Suppressive Fire at ×7 rather than ×4, so his stuns would come with far heavier Focus damage behind them, but he has no other control: no grab, no barrier and no area effect. In play his Suppressive Fire did 49, 27 and 31 Focus, and none of it rolled the Fantastic that stuns. Last on arrival, a step behind the man whose power he shares.

4.5 Grappling & Restraint

1 Quasar-Force 9.5

ALL-TIME **Telekinetic Grab's break-out target of 20** makes it soft removal rather than a hindrance. He has held Aegis-Girl, held White-Out pinned while himself at −11 Health, held Argent until she surrendered, and held Stote through repeated escape attempts. Session 14 added contested *objects*: the Diadem of Selene and the Aegis Fang moved out of the thieves' reach, and the Sphere of Harmonia taken out of Ecliptica's hand. He also cuffs people at range, once including a sleeping target without waking him.

SESSION 16 **holds at 9.5** The same two opponents again, and the same result. He grabbed Argent through a re-raised force field and held her against her own telekinetic break-out, and he grabbed Stote and crushed him unconscious for 35. Dragonborne was pinned and escaped, and the crush on him did nothing. **The brood said in the fight that grappling was why it went for him first** (2.2).

2 Lock-Step 6.7

ALL-TIME The handcuff ritual is restraint as doctrine, and it works: Nova and Ghost-Ape cuffed themselves voluntarily. His chain-whip paralysis riders have landed repeatedly, and in Session 14 one broke a goddess's hold on a teammate. Melee 7 (Session 15) adds to both halves of the axis: holding someone, and getting out of being held.

SESSION 16 **holds at 6.7** He offered the cuffs twice. **Argent started to accept** before her controller reasserted itself, and Dragonborne called it *"a good idea, but something inside us is telling us not to."* The doctrine reached the people and could not reach the thing commanding them. He cuffed Argent once she was unconscious.

3 Intrepid 6.3

ALL-TIME Crushing Grip at ×7 +7 since the Rank 3.5 advance, single-target and without finesse. For twelve sessions nothing got out. Then it failed twice: Umbra escaped with ease in Session 13, and in Session 14 he grabbed Ecliptica cleanly and **could not overcome her force field.** The grab still works; the thing it is meant to do afterwards has failed against both opponents above street tier the team has met.

SESSION 16 **holds at 6.3** He grabbed nobody. He did collapse Argent's force field with Banging Heads, which is the answer to the Session 14 failure that his grab never found.

4 Edge 2.0

DEBUT · SESSION 16 A marksman with no grapple tools and Melee 0. On the other half of the axis, his Melee defence of 19 makes him hard to grab, and nothing in his kit would break a hold once one landed. Just above Oracle on that defence.

5 Oracle 1.5

ALL-TIME A ranged attacker with no grapple tools; Suppressive Fire pins a position, not a person. Session 14 scored the other half of the axis. Ecliptica grabbed him in round three, lost the grab to a teammate's stun, grabbed him again in round four, and still had him when she left: *"Oracle has no ego or logic based powers that project strength so he only has his melee of −1 to use for escaping the grab."* The house rule that lets a mental ability substitute for Melee on an escape is the most favourable ruling in the campaign for a character like him, **and he owns nothing it can apply to.**

SESSION 16 **holds at 1.5** Nobody grabbed him. FLAG **Two advances have been banked since Session 14 and are still undeclared, for a third session.** If one bought an ego- or logic-based power that projects strength, this score is wrong by several points and the counter-build finding in §10.4 closes.

4.6 Objective Control

Taking and holding ground, protecting a point, denying a location.

1 Quasar-Force 9.3

ALL-TIME Barriers spanning two spaces per rank, placed at will, absorbing anything that does 10 or less. **Nobody else on the team can create terrain.** In Session 14 the objective was three portable artifacts, and his method — pick the objective up and put it where the enemy is not — was the correct answer to a theft; Phase Object beat it. NOTE The only artifact the team retained was the one buried in his abdomen. Session 15 added **the first denial capability on this team that works while nobody is standing on it**: a tower shield that *"will learn and adapt other teleportation methodologies,"* which denied the Titans' floors to the Destined in play.

SESSION 16 **holds at 9.3** The objective was a device in a crate, and he was down before it surfaced. The shield is at the tower, not the warehouse.

2 Intrepid 8.0

ALL-TIME **Immovable is objective control as a physical law.** He stands where the objective is, cannot be repositioned, and clears everything that comes near with Ground-Shaking Stomp. Session 14 was the case where it did not apply: the objectives were portable, and the enemies phased through floors.

SESSION 16 **holds at 8.0** Argent's telekinetic sphere pushed Oracle out and did not move him. He held his ground until he went down, and refused to be moved off it even by his own side.

3 Edge 7.5

DEBUT · SESSION 16 **He decided the objective.** The brood came for a device. Dragonborne found it and threw its crate at him, the crate broke, and Blitzkrieg picked the device up and phased to the wall, one turn from leaving. Edge took a Stopping Power shot at it with trouble for disarming a hand-held item, hit, and destroyed it. At the end of the fight he held off Blitzkrieg alone for a round so that Lock-Step could get the others out. Denial at range, and a rear guard: third on arrival.

4 Oracle 7.0

ALL-TIME Control by threat rather than by presence: held overwatch actions that froze reinforcements in a hallway, and Real Jinx making approach a losing proposition. In Session 12 he interposed against Star Heart to keep the Celestial Core's containment field standing. Session 14 reversed the polarity: for most of the fight the enemy made *him* the objective and held him in place.

SESSION 16 **holds at 7.0** His Suppressive Fire took Dragonborne, the member of the brood who actually found the device, out of the fight by demoralising him. That is control of the objective by removing the person who wanted it, and it is scored in 4.4 and 4.14.

5 Lock-Step 5.0

ALL-TIME Superb at *contesting* objectives and poor at holding them. He arrives instantly anywhere and leaves the same way. Session 14 was four turns of in, strike, out against a target he could not finish. NOTE In Session 15 he proposed dropping the tower's new shield *"for a few seconds"* to let a villain team in; that is scored as judgement in 1.6.

SESSION 16 **holds at 5.0** He held nothing and contested everything.

4.7 Reaction / Response Speed

Initiative, reactions, interrupts, and acting before the enemy does.

1 Oracle 9.5

ALL-TIME Not close. The module's Danger Sense guarantees him a turn in the bonus round of every combat, and he runs Combat Reflexes, Return Fire, Charmed Life and Precognition 1 — he acts on information the enemy has not generated yet. Session 14 was the best pure demonstration, even in a loss: the module gave him the lead to dodge an invisible attacker, his Return Fire went off as a reaction and hit her, and he still took his own action. NOTE In Session 15 the module *"did not adapt well"* to temporal transport, and recovered.

SESSION 16 **holds at 9.5** He took the bonus round as always, and his first action of the fight was the super-Marvel stun on the agreed first target. **Session 16 also showed the first counter to his reactions.** When Return Fire triggered on Dragonborne's Banging Heads, Dragonborne spent his own reaction redirecting it onto Lock-Step. A reaction can be answered by a reaction.

2 Lock-Step 8.0

ALL-TIME Blink as a reaction negates an attack outright, and Quick Phase via hex adds another interrupt layer. Session 14 was four turns of teleport-in and strike, three of them with a teleport straight back out, and he was never punished for any of them.

SESSION 16 **holds at 8.0** In one turn he Blinked to Oracle, moved him into Argent's sphere, and knocked her out. The one time he was punished, he was outside the warehouse and a teleporting enemy reached him first (4.1).

3 Edge 7.5

DEBUT · SESSION 16 Combat Reflexes, Situational Awareness and **Slow-Motion Dodge**, a free reaction that puts trouble on any attack against his Agility defence. It worked three times in four: the push-back evaded, a Dragonborne Marvel stripped of its edge, and a glitch bomb made to miss with Karma's help. Third on arrival, behind two members whose reactions act or move rather than only make an attack harder.

4 Quasar-Force 5.5

ALL-TIME Vigilance 5, permanent flight, and Evasion converting Agility attacks onto a high Melee defence. Fast in position, with no reaction powers to spend. Session 14 showed the cost: a character with no interrupt has no answer to being struck from concealment. The circlet (Session 15) raised his Vigilance *defence* to 18, which makes him a harder target, not a faster actor.

SESSION 16 **holds at 5.5** **He rolled the first Marvel initiative of his career** and spent the bonus round being hit. Dragonborne and Blood Blade had Marvels too, and they had planned for him. With no reaction to spend, his only answer was Karma after the fact.

5 Intrepid 3.0

ALL-TIME Agility 0 and a Vigilance defence of 14. He is the last to act and the hardest to move once he has. In Session 14, stunned in round six, he was still stunned in round seven when the fight ended.

SESSION 16 **holds at 3.0** His one reaction-economy moment was Karma spent to take the Marvel off Blood Blade's attack; it still did 43 and put him down.

4.8 Personal Mobility & Positioning

1 Quasar-Force 9.5

ALL-TIME Flight 2 is unmatched: combat speed at base × rank, non-combat at **base × rank × 50**. He hovers permanently out of melee reach, once moved a van fifteen squares vertically while carrying it, and nobody else operates in three dimensions by default. Session 14 was the reminder that positioning is a choice, not a

property: two perfect rounds from concealment, then he flew into the open. On Kwa (Session 15) he hovered twenty metres off and went higher when the progenitor reached for him.

SESSION 16 **holds at 9.5** He used it well, and it was not enough. After the first knockdown he went to the far side of the warehouse, behind a shipping container, and worked from there. Blitzkrieg found him ("*What's ya doing, Hiding?*") and a round later moved into range and dropped him. At −15, kept up by Let's Go, he stayed outside the warehouse and inside Oracle's range: positioning as life support.

2 Lock-Step 8.0

ALL-TIME The best *tactical* repositioning in the party, if not the fastest. Blink as a reaction negates attacks, Teleport 1 covers rank × 10 in combat, and Teleport Blind via hex reaches places he has never seen. Session 14 was four insertions and three clean extractions without one counter-attack landing. He volunteered as scout on Kwa for exactly this reason.

SESSION 16 **holds at 8.0** Blink, a teleport into the middle of Blood Blade and Dragonborne, and a teleport out after each strike. Blood Blade switched targets in Round 1 "*because of Lock-Step's teleporting nature.*" The one position that failed him was the one he chose to rest in.

3 Intrepid 4.5

ALL-TIME Flight 1 at base × rank. He flies, and has used it to get around an ice barrier and down into an alley. Agility 0 caps the finesse; in Session 14 he considered punching through a floor to chase a phasing enemy, which is the exact shape of his mobility problem. In Session 15 he tailed a limousine across Blüdhaven by air.

SESSION 16 **holds at 4.5** He walked up to Dragonborne and Stote and punched. No flight is recorded.

4 Edge 2.5

DEBUT · SESSION 16 No movement power. Agility 7 makes him quick on foot, and he moved the way a marksman should, shooting and then stepping away, from Stote and later from Blitzkrieg. His roster role is *Precision Marksman & Spatial Infiltrator*, and nothing on the sheet yet supports the second half. VOLATILE His powers summary calls the weapon "*spatial-severing.*"

5 Oracle 1.5

ALL-TIME No mobility power at all: Agility 4 and one STAR Labs acrobatic roof-jump. He walks, and it has cost the team tempo more than once; in Session 14 both of his moves ended with him grabbed the moment he arrived. On Kwa he said it himself: "*I'll have to run. I got a long run to get over there.*"

SESSION 16 **holds at 1.5** He ran back into the warehouse on his own feet. His other two moves of the fight were Lock-Step's: into Argent's sphere, and out of the building unconscious.

4.9 Team Mobility & Positioning

1 Lock-Step 9.8

ALL-TIME Overwhelmingly. He is the team's strategic mobility layer. Teleport Together has inserted the entire team into a fortified lab, extracted Intrepid and Oracle mid-fight, lifted Robin off a sacrifice altar, cleared a bank of hostages and driven a civilian home. In Session 13 he teleported into a STAR Labs facility he had never seen **using a drone camera feed for visualisation**. VOLATILE In Session 15 the progenitor told him "*you may, Eric. Your abilities*" about temporal travel; time powers are on the GM's ban list, and that is not scored.

SESSION 16 **9.5 → 9.8 (+0.3) Three different uses in one fight.** An insertion: Blink to Oracle, then a Powerful Hex for Teleport Together that delivered Oracle *inside* Argent's telekinetic sphere. A mid-fight rescue: the unconscious Oracle carried out of the building in Round 2. And the whole extraction: Oracle and Quasar-Force, then Edge, then a last trip back for Intrepid on almost the last of his Focus. He asked first, too: "*Who is comfortable where they are at and who wants to move a little bit.*"

2 Quasar-Force 6.5

ALL-TIME Not transport, but the highest-value *positioning* asset. The telekinetic nudge that converts a teammate's miss into a hit has been decisive in at least nine engagements. He places Oracle where Oracle asks to be placed, guided Intrepid to the square from which one Stomp removed six monsters, and funnels enemies with barriers. Session 14 added object logistics to personnel logistics.

SESSION 16 **holds at 6.5** One aid, on Edge's Suppressive Fire against Argent, and a grab that held the first target in place for Lock-Step. Then he was down.

3 Oracle 4.0

ALL-TIME Positioning as an information service: precognitive warnings broadcast before contact, and the explicit guidance that set up Intrepid's best attack of the campaign. In Session 14, from inside a grab, he guided Lock-Step's swing onto Ecliptica rather than onto Intrepid. On Day 56 (Session 15) the service was the forecast that pointed the team at the warehouse.

SESSION 16 **holds at 4.0** The forecast was right about the warehouse. In the fight his module turned Intrepid's stomp, which reached only Dragonborne, into a hit.

4 Intrepid 0.5

ALL-TIME He moves himself only.

SESSION 16 **holds at 0.5** Nothing changed.

5 Edge 0.5

DEBUT · SESSION 16 He moves himself only. The rear guard that let Lock-Step move everyone else is scored in 4.6 and 4.19.

Tie: Intrepid over Edge at 0.5. Nothing in Session 16 separates them, and on an unbroken tie the newcomer is listed second.

4.10 Single-Target Damage

Multiplier-plus-add convention; expected values use a Marvel-die mean of 4.33 and exclude Fantastic doubling, edges, assists, and Focus investment.

PC	Attack ability	Multiplier + add	Avg damage / hit	On a Fantastic
Intrepid	Melee	×7 +7	**37.3**	49 (98 doubled)
Edge	Agility (ranged)	×7 +7	**37.3**	49 (98 doubled)
Quasar-Force	Logic	×7 +7	**37.3**	49 (98 doubled)
Lock-Step *(whip)*	Melee	×6 +7	**33.0**	43 (86 doubled)
Oracle	Agility	×4 +4	**21.3**	28 (56 doubled)
Lock-Step — unarmed	*Melee*	*×3 +7*	*20.0*	*25 (50 doubled)*

MECHANICAL FLAG *The roster lists Edge's Agility damage at ×7 +7, which does not appear to include the Cutting Edge's +1 ranged damage multiplier. If it applies, his ranged line is ×8 +7: 41.7 on an average hit, 55 on a Fantastic and 110 doubled, the highest on the team. Scored on the roster figure.*

1 Intrepid 9.2

ALL-TIME A ×7 multiplier, tied for the highest on the team, and **Smash is the differentiator: +1 to the add for every 2 Focus spent, with a built-in edge.** His 90 Focus is otherwise nearly idle, so the conversion is close to free. He has the highest floor and the highest realistic ceiling, and he has delivered most of the knockouts on named opposition; in Session 14 a Marvel on Umbra removed the hammer-wielder in one action. Melee 7 (Session 15) lifted the add to +7.

SESSION 16 **holds at 9.2** Thirty-two to Blood Blade with Banging Heads, 28 to Dragonborne with a punch, 32 more with Smash, and a Smash Marvel in Round 4 that put Blood Blade at 17 and stunned her. He knocked out nobody this time. **The fight's three knockouts went to Lock-Step, Quasar-Force and Edge.**

2 Edge 9.0

DEBUT · SESSION 16 **×7 +7 at range, on Agility 7 with Accuracy 4, tied for the best base line on the team.** Two powers turn it into damage per action that nobody else delivers at range. Stopping Power, his Signature Attack and so always carrying an edge, doubles on a Fantastic and grants a second attack on the same target; Double Tap doubles and adds bleeding. In play one Stopping Power took Stote from full Health to 19 — 74 on the Marvel and 27 on the follow-up, **101 in one action** — and another Marvel knocked out Blood Blade. He trails Intrepid only on Smash's scaling add.

3 Quasar-Force 8.7

ALL-TIME ×7 +7 off Logic 7, tied for the best base line, delivered at five spaces per rank. Telekinetic Attack doubles and stuns on a Fantastic, and Grab into Crush chains in a single round. He is held back by what he targets (Melee and Resilience defences) and by Crush needing the grab to land first. In Session 14 he attacked nobody at all.

SESSION 16 **holds at 8.7** One crush, for 35, knocked out Stote after Edge's 101. The crush on Dragonborne did nothing. He spent the fight's opening exchange being hit and its last four rounds down.

4 Lock-Step 7.8

ALL-TIME **The ×6 is not his, it is the whip's.** His base multiplier is ×3 and he carries no Mighty; the Vibranium Chain Whip supplies the rest, and Summonable makes disarming him impractical. What he does hold is **the highest Fantastic rate in the party**: Chain Strikes carries an edge, Signature Attack adds a second, and Combat Trickery guarantees a 1 on the Marvel die once per battle. In Session 14 his damage was shunted to Focus and negated by a force field. Session 15 added Elemental Infusion (Force), which under the house rule lets the whip hit a phasing target.

SESSION 16 **7.5 → 7.8 (+0.3) The spike landed on people this time.** Chain Strikes with Combat Trickery did 84 to Argent, and a second strike knocked her out. In Round 3 a Marvel with multiple edges did 50 to Blood Blade, and a follow-up 19 more. VOLATILE The Force whip was never swung at a phaser in the log; the hand-waved ending credits it as one of the two reasons Blitzkrieg withdrew.

5 Oracle 3.5

ALL-TIME ×4 +4, the lowest on the team, and **first for Focus damage rather than Health**: Suppressive Fire and Return Fire attack a different resource entirely. In Session 14 Ecliptica recovered the Focus damage he dealt by draining him. A damage type the enemy can refund is a damage type with a counter.

SESSION 16 **holds at 3.5** The Focus damage did its job — the stuns and the demoralise that drove Dragonborne off are scored in 4.4 and 4.14 — and nobody refunded it.

Closest call: Intrepid over Edge at 1–2, on identical base expected damage. **Smash's scaling add and its built-in edge are the margin, and the Cutting Edge's +1, if it applies, would erase it.**

4.11 Area-of-Effect Damage

1 Intrepid 9.6

ALL-TIME Not close. Ground-Shaking Stomp checks Melee against the Agility defence of every target within reach plus rank in spaces. It has removed six monsters in a single attack, then four more, then a room of mobsters, then every Lex-Corp guard in an alley. Banging Heads takes two at full damage. With Exemplar II gone, he is the only member with a real area attack.

SESSION 16 **holds at 9.6** He used both. Banging Heads in Round 1 collapsed Argent's force field and did 32 to Blood Blade. The Stomp in Round 5 reached only Dragonborne, became a hit on Oracle's module assist, and did 11.

2 Lock-Step 3.0

ALL-TIME Elemental Burst is functionally single-target. Whatever area effect he brings comes out of a Powerful Hex configuration and costs him a turn to set up. The Force infusion adds reach against phasers, not area.

SESSION 16 **holds at 3.0** Nothing changed.

3 Quasar-Force 1.0

ALL-TIME **Effectively zero.** Telekinetic Toss damages the thrown person and one target, and that is the whole list. It is the most conspicuous gap in his kit, and nothing on his Rank 3→4 plan closes it.

SESSION 16 **holds at 1.0** Nothing changed.

4 Oracle 0.5

ALL-TIME Single-target ranged only.

SESSION 16 **holds at 0.5** Nothing changed.

5 Edge 0.5

DEBUT · SESSION 16 Single-target ranged only: Suppressive Fire, Double Tap and Stopping Power each take one target. The newcomer did not fill the gap this axis has been describing.

Tie: Oracle over Edge at 0.5. Nothing in Session 16 separates them, and on an unbroken tie the newcomer is listed second.

The second-widest first-to-second gap in the section is still here, at 6.6, behind only Healing's 7.0. **This team's entire area-damage capability is still one person's stomp.** Session 16 was five enemies spread through a warehouse, the shape of fight an area attack is for, and the one stomp reached one of them.

4.12 Ranged Combat / Engagement

1 Edge 9.4

DEBUT · SESSION 16 **A second ranged specialist, and the better shot: first on arrival.** Accuracy 4 to Oracle's 1, a ×7 line to Oracle's ×4, three ranged attack powers — Double Tap, Stopping Power as his Signature Attack, and Suppressive Fire — and the Cutting Edge, a constructible weapon nobody can take off him for long. His best shot of the fight was not damage. With trouble for disarming a hand-held item, he shot the device out of Blitzkrieg's hand as she reached the wall, and destroyed it. **He also answers, on paper, the counter that beat Oracle in Session 14.** Heightened Senses 2 compensates for a lost sense and gives a double edge to perceive, which is the profile that, in Exemplar II, still saw the room when invisibility and fog had beaten every instrument. Untested.

2 Oracle 9.0

ALL-TIME For fifteen sessions the team's dedicated ranged specialist: Accuracy 1, Suppressive Fire stunning on a Fantastic, Return Fire punishing anyone who declares against him, and held-overwatch discipline in every engagement. His misses hit walls. Session 14 showed the quality — the predictive module let him hit an *invisible* opponent — and the first hard counter: once the Vapors of Galator blocked line of sight past five squares, he could not shoot an enemy he could not see, from inside a grab he could not leave. **A ranged specialist with no mobility is a turret, and Session 14's opponent fogged the turret and then bolted it to the floor.**

SESSION 16 **holds at 9.0** **He loses first without losing anything.** Suppressive Fire in seven of his eight turns, the super-Marvel that stunned Argent, two stuns and a demoralise on Dragonborne, and one Return Fire turned against him. The newcomer is simply the better shot. The obscurement counter is now answered on paper by a teammate rather than by him.

3 Quasar-Force 8.5

ALL-TIME **Everything he does happens at five spaces per rank**, which makes him the most consistently ranged member of the team without a single ranged *attack* trait: Telekinetic Attack, Grab, Barrier and Toss all reach, off Logic 7. Session 14 was an entire session conducted at range on objects, including lifting an artifact out of a goddess's hand from across a gallery.

SESSION 16 **holds at 8.5** He grabbed Argent from behind a shipping container on the far side of the warehouse. Range did not protect him: Blitzkrieg came into range and threw.

4 Lock-Step 5.0

ALL-TIME The chain whip has reach and Elemental Burst projects, but his kit wants him in the target's face, and he obliges. In Session 14 he went in on each of his four turns and three times returned at once to a position from which he could not be answered. The Force infusion sits on a reach weapon, not a ranged one.

SESSION 16 **holds at 5.0** In, strike, out, three times.

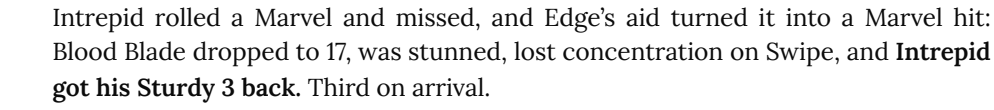

5 Intrepid 1.0

ALL-TIME No ranged option whatsoever. He flies to the problem and hits it.

SESSION 16 **holds at 1.0** Nothing changed.

4.13 Support — Ally Buff

Powers and actions that make teammates measurably better.

1 Oracle 9.7

ALL-TIME The team's only dedicated buffer, and the margin is enormous. **Let's Go** kept Quasar-Force conscious and acting at −11 Health. **Never Surrender** pulled Intrepid out of a demoralised stun against Omega Grade. **Danger Sense guarantees him a turn in the bonus round of every combat**, usually spent on somebody else. In Session 14, from inside an inescapable grab at 3 Focus, he guided Lock-Step's whip onto Ecliptica. Session 15 added a GM-granted channel: his module resonates with Lock-Step's time-altering powers, which gives him "*more easy justification to do assist directions to give Lock-Step edges.*"

SESSION 16 **holds at 9.7** **Let's Go was the hinge of the fight.** It held Quasar-Force up at −5 in the opening exchange, held him again from Round 4 to the end at −15 after 15 Health went in, and then moved to Lock-Step for the extraction. His module turned Intrepid's stomp into a hit, and he aided Edge's Suppressive Fire on Argent. VOLATILE The Lock-Step resonance channel was not used.

2 Quasar-Force 7.5

ALL-TIME No buff *powers*, and nonetheless the second-best buffer on the team. The telekinetic nudge that turns a teammate's miss into a hit is a pure action-economy gift, decisive in at least nine engagements. Session 14 produced three in two rounds, including one that made Intrepid's punch land on Umbra *without wasting the Marvel Intrepid had already rolled.* In Session 15 he used deduction to hand Lock-Step an edge on recalling the Grey Lantern oath.

SESSION 16 **holds at 7.5** One aid, on Edge's Suppressive Fire. The nudges need him upright, and he was upright for the first half of the fight only.

3 Edge 5.0

DEBUT · SESSION 16 No buff powers, and two assists that each decided something. In Round 3 his aid helped Intrepid's Smash land 32 on Blood Blade. In Round 4 Intrepid rolled a Marvel and missed, and Edge's aid turned it into a Marvel hit: Blood Blade dropped to 17, was stunned, lost concentration on Swipe, and **Intrepid got his Sturdy 3 back.** Third on arrival.

4 Lock-Step 4.5

ALL-TIME Powerful Hex can be configured into buff-adjacent effects, and Teleport Together is force projection of a kind. It is real but occasional, and it always costs him the turn. Since Session 15 he has been the *recipient* of the most specific buff channel on the team.

SESSION 16 **holds at 4.5** He aided Edge's Suppressive Fire, and put Oracle back inside Argent's sphere after it had pushed him out.

5 Intrepid 2.5

ALL-TIME Immovable holding a line and a body absorbing hits meant for softer people are genuine passive support, not buffs. Session 14 brought the first two active assists of his campaign: he guided Lock-Step's whip from a miss into a hit and told him when to take the opening.

SESSION 16 **holds at 2.5** He aided Edge's Suppressive Fire on Argent.

4.14 Support — Enemy Debuff

Effects that degrade enemy capability rather than removing enemy Health.

1 Oracle 8.8

ALL-TIME **Real Jinx imposes trouble on every attack made against him, permanently, with no action cost and no roll** — a debuff applied automatically to every enemy who engages him. In Session 14 it made Ecliptica's fourth brain drain miss. Suppressive Fire stuns on a Fantastic, Return Fire punishes anyone who

declares against him, and his Focus damage degrades enemy capability directly. AGAINST Ecliptica recovered the Focus damage he dealt by draining him, so his damage type is a resource an enemy can refund.

SESSION 16 **8.5 → 8.8 (+0.3) The debuff that ended the fight was his.** The opening super-Marvel stunned Argent. In Round 3, on his way back from being knocked out, a Marvel for 34 stunned Dragonborne, and in Round 5 another stun followed. In Round 7, with Edge's 31 having left Dragonborne at 11 Focus, his 15 demoralised him; Dragonborne missed his next attack, said "*We need to leave!*", and fled. **The brood's strongest body left the fight on Focus damage, not Health.**

2 Lock-Step 8.4

ALL-TIME The broadest active debuff kit on the team: paralysis riders on chain-whip hits, a Powerful Hex sleep effect that removed Aegis-Girl from a fight entirely, ice control, and Disrupt Person. In Session 14 the Marvel-boosted whip stunned an Olympian goddess and broke her grab on Oracle. His effects are bigger than Oracle's and need rolls and setup that Oracle's do not. The Force infusion (Session 15) extends the whip's riders to phasing targets.

SESSION 16 **holds at 8.4** His contribution was removal rather than degradation — Argent knocked out, Blood Blade cut down — and no rider effects are recorded.

3 Edge 7.8

DEBUT · SESSION 16 **Oracle's tool at nearly twice the multiplier.** Suppressive Fire at ×7 turns his Agility into Focus damage: 49 to Argent with the whole team aiding, 27 to Blood Blade, and 31 to Dragonborne, which set up Oracle's demoralise. He also tried his Monster trait — he "*uses his monstrousness to intimidate*" — on the two still standing, and "*they don't budge.*" No stun yet; a Fantastic on that line would be the largest single debuff on the team.

4 Quasar-Force 7.0

ALL-TIME Control as debuff, and the numbers are brutal: **a grab break-out target of 20** makes Telekinetic Grab a soft removal rather than a hindrance. He has held Aegis-Girl, White-Out, Argent and Stote out of fights for multiple rounds. Barriers deny positioning, and Telekinetic Attack stuns on a Fantastic.

SESSION 16 **holds at 7.0** The grab held Argent, the brood's mind-controller, through the first round. The pin on Dragonborne did not hold.

5 Intrepid 5.3

ALL-TIME Ground-Shaking Stomp prones everything within reach plus rank on a Fantastic, which is mass debuff by physics. Crushing Grip holds one, and Banging Heads staggers two. In Session 14 he held a goddess in place for a round and did nothing to her while doing it.

SESSION 16 **5.0 → 5.3 (+0.3) He took his own power back.** In Round 4 his Edge-assisted Smash Marvel stunned Blood Blade, and the stun broke her concentration on Swipe, which returned his Sturdy 3. Banging Heads in Round 1 had already collapsed Argent's force field. Two debuffs, both on the right target.

Closest call: Oracle over Lock-Step by 0.4, up from 0.1. For two revisions this axis said "*one more session like it and this flips.*" Session 16 was the test, and it went the other way: **Lock-Step's debuffs are larger, but Oracle's ended the fight.**

4.15 Healing

1 Oracle 10.0

ALL-TIME **The only 10.0 awarded in the document.** He is the sole member with a general capacity to restore another person's Health: Healing Hands converts his Focus into their Health one for one, and Let's Go and Never Surrender reverse conditions nobody else can touch. He healed Quasar-Force back from −11, revived the man Intrepid nearly killed, and attempted to revive the man Quasar-Force killed. In Session 9 he rationed his own reserves, a triage decision nobody else on the roster is equipped to make. In Session 14, drained to 3 of 180 Focus, he could not heal a teammate at −12: **the monopoly failed once, under load, at the moment it was the only thing that mattered.**

SESSION 16 **holds at 10.0 The monopoly carried the fight.** Let's Go kept Quasar-Force acting at −5, and later at −15, and then moved to Lock-Step for the extraction. He put 15 Health into Quasar-Force mid-fight, knowing it would not bring him back. After the fight he healed Lock-Step so that Lock-Step could teleport the others, healed Quasar-Force to consciousness, and healed Lock-Step again. Nobody else restored anyone's Health. **This is the session the axis exists for, and it went the way the score says.**

2 Lock-Step 3.0

ALL-TIME For three revisions this document scored Powerful Hex's healing potential as theoretical upside. **Session 14 used it.** With Quasar-Force at 0 two hours after the fight and the medic empty, he configured Powerful Hex into healing hands and brought him to 5, the second person on the roster ever to restore another person's Health. Three caveats keep it at 3.0: a hex configuration rather than a dedicated power; "*the minimum amount allowed that will wake him up*"; and a stated motive that was not compassion ("*Really need him to start working on this 'phase stuff'*").

SESSION 16 **holds at 3.0** VOLATILE Not used, for a second session. Nobody needed the backup, because the healer was never drained, and every point of Lock-Step's Focus went into teleports, which was the better use of it. The question this entry has carried since Session 14 — whether the backup recurs — stays open.

3 Intrepid 2.7

ALL-TIME Healing Factor, the best regeneration on the team, returning a Resilience-rank of Health every turn — 7 since the Rank 3.5 advance. Self only.

SESSION 16 **holds at 2.7** It worked exactly as written: −3 to +4 in the same round, and −49 to −42 to −35 while he lay unconscious.

4 Edge 2.0

DEBUT · SESSION 16 Healing Factor at Resilience 3, self only. It got him up from exactly 0 in Round 7, and he held the rear guard on it. Behind Intrepid on rate.

5 Quasar-Force 0.0

ALL-TIME **Zero.** No healing factor, no self-repair and no regeneration of any kind in combat, and he is the only member with none. Outside combat the box's bio-mechanical constructs heal him fast — three hours from −12 to consciousness, and a full 60 in ten hours of sleep — but only the in-combat half has ever decided anything.

SESSION 16 **holds at 0.0** He healed himself 18 in the opening exchange, but with Karma, under a rule every character has; that is not a capability. Zero for a sixteenth session.

Structural note. One healer and one improvised backup. **Session 16 tested the healer at full load, and he held.** It did not test the scenario the single-healer finding in §10.4 is about: the counter-build that drained him in Session 14 was not used, and the backup was not needed. If a mentalist takes Oracle out of a fight, the team still has no recovery mechanism *during* the fight. NOTE Edge brings a second healing factor, not a second healer.

4.16 Ability to Avoid Collateral Damage

1 Oracle 9.0

ALL-TIME Ranged precision with Accuracy 1 and a Charmed Life edge. He moves nothing, shakes nothing and lifts nothing, and his misses hit a wall.

SESSION 16 **holds at 9.0** The one stray shot of the fight was his, and an enemy aimed it: Dragonborne redirected his Return Fire onto Lock-Step. It is not scored against him.

2 Quasar-Force 8.0

ALL-TIME **The most interesting entry on this axis.** His powers are inherently surgical: firearms plucked individually off gang members, a van lifted without disturbing an alley, unconscious bodies extracted from a room filling with gas, a sleeping man cuffed without being woken. Session 14 was three turns of precision work in a gallery of irreplaceable objects, without breaking one. Against it, the largest destructive ceiling on the team. **The control is genuinely there; the judgement occasionally isn't.**

SESSION 16 **holds at 8.0** Two grabs and a crush, each on a person, in a warehouse full of crates. No collateral is recorded.

3 Edge 7.5

DEBUT · SESSION 16 A marksman's profile: every attack he made was one shot at one target, and his most delicate one was aimed at a device in a villain's hand. Against it, the roster describes his weapon attacks as "*spatial-severing*," and his backstory begins with an attacker's weapon sliced to pieces. **Precise in his first fight; the ceiling of what he cuts is unknown.**

4 Lock-Step 6.0

ALL-TIME Teleportation is clean, the whip is single-target and his ice constructs are localised. Session 14 was four insertions and three extractions in a room full of exhibits without a stray effect. Against: he has proposed setting fires in bushes as a plan, and Berserk removes every restraint at once. His Session 15 collateral was reputational, and it is scored in 2.5 and §9.

SESSION 16 **holds at 6.0** Clean, and no Berserk.

5 Intrepid 2.5

ALL-TIME His signature attack is, by definition, an indiscriminate area effect, and a ×7 multiplier and 301 pounds arriving by air into an enclosed room is a structural event. In Session 14, in a gallery holding three Themysciran relics, he did not use Ground-Shaking Stomp once. Whether that was restraint or aperture was unresolved.

SESSION 16 **2.0 → 2.5 (+0.5) He used the stomp, and it hit only an enemy.** In a warehouse full of crates, with four teammates and a device everyone wanted somewhere on the floor, his one Ground-Shaking Stomp reached Dragonborne and nobody else, with Oracle's module steering it onto him.

4.17 Lethal vs Non-Lethal Precision

1 Oracle 9.5

ALL-TIME The only member whose primary attacks **cannot kill**: Suppressive Fire and Return Fire deal Focus damage. On top of that he carries Healing Hands, Let's Go and Never Surrender, so he can un-kill other people's mistakes, and has.

SESSION 16 **holds at 9.5** Every point he dealt was Focus, and he is the reason the fight with Dragonborne ended in a retreat rather than a body.

2 Lock-Step 7.5

ALL-TIME **He holds a throttle nobody else has.** Half of his ×6 comes from the whip, so dropping it halves his multiplier — a deliberate, mechanical non-lethal setting, used in Session 11 and announced out loud. Session 13 ran the doctrine twice under pressure and it held both times. Against: he was beating a captive conscious in Session 9, and Berserk suspends the doctrine entirely. **Session 15 gave the doctrine an exception clause.** "No, *I'm not coming around on lethal force*," he said in the room; moments later, in private, it was "*dealt with, cinder blocks in the ocean*," justified by "*it's not human.*"

SESSION 16 **7.0 → 7.5 (+0.5) The doctrine was stated, applied and held under the heaviest fire the team has taken.** When Oracle's line about the five came out garbled ("*hopefully, die, harming them?, dissuade them?*"), Lock-Step corrected it: "*Nope, nope, Nightwing did say we can bring them back, so knock them out.*" He offered the cuffs twice, knocked Argent out with 84 and a second strike, and cuffed her. The exception clause is still on file — "*The other situation, is that other team's problem*" — which is why half a point comes back rather than the whole point.

3 Edge 6.0

DEBUT · SESSION 16 Half of his offence is non-lethal by construction: Suppressive Fire deals Focus damage, and he used it three times. The other half is the hardest-hitting ranged line on the team: Stopping Power put 101 into Stote in one action, and a Marvel knocked out Blood Blade. Nobody died. The unanswered question is the power behind the weapon, which slices objects by concentration, and a backstory monster that "*cut down armies.*" **He has a throttle — choosing Suppressive Fire — and nobody has yet seen him at full.**

4 Quasar-Force 3.5

ALL-TIME The finest control on the team, the clearest stated ethic, and **the team's only confirmed kill.** Crush is an all-or-nothing damage reaction applying ×7 +7 to whatever is already held. His precision is high; **his calibration against unknown durability is the failure mode.** His stated rule, per the roster, is to kill only against lethal intent that cannot otherwise be stopped. Session 15 added "*we would be more comfortable unleashing Fade-Out with his full lethal fury on the controller.*" **The old risk was calibration; the new one is his willingness to delegate.**

SESSION 16 **holds at 3.5 The calibration held on a person he had crushed before.** Stote, at 19 Health after Edge's shots, took a 35-point crush and was knocked out, not killed. He also described the Destined errand as "*the murder hobos*" sent "*after the bad progenitor.*" The delegation is unchanged.

5 Intrepid 2.0

ALL-TIME Every large swing is a near-death event against ordinary humans — a coin flip on manslaughter — and he knows it, which is exactly why he is afraid all the time. In Session 14 a Marvel on Umbra for massive damage produced a knockout rather than a body.

SESSION 16 **holds at 2.0** His opponents were powered teenagers, not ordinary humans, and the heaviest hit he landed was 32. The coin was not flipped.

4.18 De-escalation / Conflict Termination Without Force

1 Lock-Step 9.7

ALL-TIME **The most underrated thing he does, and it is genuinely excellent.** He opens engagements offering handcuffs and telling people they don't want to kill anyone; Nova and Ghost-Ape cuffed themselves rather than fight him. He talked the Burnout Kings into standing aside and negotiated the Destined out of the lobby. Session 15 was the single best de-escalation this document has recorded. He paused a team that had talked itself into a fight, found the missing premise ("*do we even know if they're hostile?*"), walked up to an apex predator's leader and asked it a question, and worked the conversation to terms both sides accepted. The officer who had built the scenario told him: "*This was a test to see what you would do… Your choices are interesting.*" Against it, from the same session: the Day 56 proposal that "*we might need to break him*," handed to a villain team.

SESSION 16 **holds at 9.7 The offer reached the people and lost to the thing controlling them.** Offered the cuffs, Argent "*seems to start to 'accept'*", and then her eyes rolled back as if she had received a renewed command to kill. Offered again, Dragonborne said "*It is a good idea, but something inside us is telling us not to.*" No words were going to work against a controller, and he said them anyway, twice — then "*I don't know why you keep wanting to do things the hard way.*"

2 Oracle 8.0

ALL-TIME He demands surrender before nearly every engagement, without exception and without being told to. His version is less charismatic than Lock-Step's and applied more consistently. In Session 14 he rang the client, opened with the loss, and credited Wonder Woman for taking responsibility. On Kwa (Session 15) his first read was elimination, and he talked himself out of it on the evidence.

SESSION 16 **holds at 8.0** No surrender demand is recorded this time; Lock-Step made the offers. His garbled line about the five — "*hopefully, die, harming them?, dissuade them?*" — ended on *dissuade*, and he did not contest the correction to knock-outs.

3 Quasar-Force 7.0

ALL-TIME Compassion as a termination tool, effective in a narrow band and remarkable inside it. Argent surrendered while he was holding her. Cassidy Yanks gave her real name because he was kind to her. World Ender's whole villain persona collapsed under sincerity. In Session 14 he defused the panicking box by acknowledging its fear. Session 15 was split: "*an exchange of truth*" and "*I don't think we should just beat him up*" about Lobo, against a debate he escalated with the one being present who could have acted on it.

SESSION 16 **holds at 7.0** He read the situation correctly before anyone tried: "*We probably can't talk to these guys, because they are being controlled.*" He did not try, and he was right.

4 Edge 3.0

DEBUT · SESSION 16 His instinct before the door opened was a plan, not a fight: "*Do we have a plan for when we enter this place?*" His one attempt to end things without force in the fight was the other kind — the Monster trait used to intimidate the last two standing — and "*they don't budge.*" Fourth, on one good question and one intimidation that failed.

5 Intrepid 0.5

ALL-TIME On the record, Shadow-Boxer would have got nothing out of him but fist. In Session 14, the one conflict he was personally involved in, he escalated, lost, and retreated with "*he was just joking.*" In Session 15 he was the member most ready to attack a species the team then saved ("*It's time to take them out!*").

SESSION 16 **holds at 0.5** Nothing changed.

4.19 Rescue / Civilian Protection

1 Lock-Step 9.8

ALL-TIME The best rescue tool on the team by a distance. He teleported a bank's worth of hostages clear, lifted Robin off a sacrifice altar, extracted teammates mid-fight and drove a civilian home. In Session 13 he freed three mind-controlled hostages at once by knocking out the thing holding the leash. **Teleport Together is the only power on this roster that removes a person from danger instantly.** Session 14 added the first medical rescue by anyone but Oracle. Session 15 was the largest rescue in the campaign, done without a power: the planet Kwa has a people on it because he argued for them.

SESSION 16 **9.7 → 9.8 (+0.1) Two rescues of teammates, and the first with consent asked.** In Round 2, with Oracle unconscious at −2 in the middle of the brood, he teleported out of the building with him. In the hand-waved ending he got all four teammates out of a building two villains were still in. Before either, he asked: "*Who is comfortable where they are at and who wants to move a little bit.*" The tenth is small because the axis is already near the ceiling.

2 Oracle 8.5

ALL-TIME Rescue after the fact and by prevention: he revives, he heals, and he demands surrender first precisely so that nobody needs rescuing. In Session 12 he put his own body between Star Heart and the Celestial Core's containment field. Session 14 was the first session he could not do it: held and empty, he watched the person he would have reached first stay on the floor.

SESSION 16 **holds at 8.5** The Session 14 failure did not repeat. The person he would have reached first went down twice, and both times Let's Go reached him.

3 Quasar-Force 8.4

ALL-TIME He pulled unconscious bodies out of a room filling with toxic gas, moved a juice van away from buyers instead of destroying it, and cut Doctor Varga out of webbing. He proposed the parasite screening that caught three infections. In Session 14 he broke cover to deny a goddess the artifact that could have located Themyscira and took a blade through the abdomen for it. Since Session 15 the tower shield protects at the scale of a structure.

SESSION 16 **holds at 8.4** Nobody was rescued from the brood this session (note below). His screening precedent — "*we were able to cure the other kids*" — is still the hope for the five.

4 Intrepid 7.0

ALL-TIME He absorbs the damage that would otherwise land on someone softer, and Immovable makes him a wall people can stand behind. In Session 12 he interposed for Doctor Varga deliberately and unprompted. On Kwa he offered the scout "*You could always use my body as a shield.*"

SESSION 16 **holds at 7.0** He stayed where the damage was and refused to be moved out of it, which is the body-as-shield offer made good.

5 Edge 6.8

DEBUT · SESSION 16 **The rear guard.** With Oracle near collapse, Quasar-Force at −15 and Lock-Step needing turns to ferry them, he held off Blitzkrieg alone for a round so that the extraction could start. Close behind Intrepid on one act of protection.

NOTE *The civilians in this fight were the opponents.* The five were infected teenagers under a controller's orders, and Lock-Step's rule — *"we can bring them back, so knock them out"* — made the brief a rescue as much as a fight. Three were knocked out and left in the warehouse, one of them cuffed; two left on their own feet. **None was secured, cured or brought back**, and the log does not resolve the 24-hour clock from Session 15. By the end, the team itself needed rescuing.

4.20 Combat Synergy / Combined-Arms Compatibility

How much better this person makes everyone else's kit work.

1 Quasar-Force 9.5

ALL-TIME **The telekinetic nudge that converts a teammate's miss into a hit is the most efficient action economy on the team**, decisive in at least nine engagements. He guided Intrepid to the exact square from which one Stomp removed six monsters, places Oracle where Oracle asks to be placed, and builds barriers that funnel enemies into the brawlers. Session 14 added preserving somebody else's critical rather than replacing it. Every one of those actions is worth more in someone else's hands than in his own.

SESSION 16 **holds at 9.5** The grab that held Argent was the platform for her knockout: Lock-Step put Oracle into her sphere and finished her while she was held. He also aided Edge's shot. Then he was down.

2 Oracle 9.3

ALL-TIME He heals, buffs, revives and positions, and takes a turn in every bonus round. **He raises everyone's floor where Quasar-Force raises their ceiling.** In Session 14 he contributed synergy from inside a grab at 3 Focus. Session 15's Grey Lantern resonance is **the first synergy on this roster that exists because two characters' powers are compatible, not because one of them is generous.**

SESSION 16 **holds at 9.3** His Focus damage and Edge's stacked: Edge's 31 left Dragonborne at 11, and Oracle's 15 broke him. His module steered Intrepid's stomp. Let's Go is synergy in its plainest form, and it kept a teammate below zero on the board for half the fight.

3 Lock-Step 8.2

ALL-TIME Enormous positive potential and a recurring negative. He inserts the whole team into places it could not otherwise reach, and he also removes people from fights without asking. Session 14 was the most-assisted performance on record at the time: four pieces of teamwork from four teammates in one combat. **A character who absorbs help from every teammate in a five-round fight is a combined-arms platform whether or not he thinks of himself as one.** In Session 15 he connected two teammates to an alien hive mind without asking them.

SESSION 16 **holds at 8.2** The recurring negative half-recurred: he asked Intrepid before moving him, and moved Oracle into Argent's sphere with no recorded ask. That move was combined arms in a single turn — his teleport, Quasar-Force's grab and his own whip. He also aided Edge's Suppressive Fire.

4 Edge 8.0

DEBUT · SESSION 16 **His first attack for the team was aided by all four of his new teammates** — Intrepid, Oracle, Lock-Step and Quasar-Force on one Suppressive Fire at Argent, for 49 Focus. Nobody had to be told the newcomer's shot was the one to back. He returned it: two aids to Intrepid, one of which turned a Marvel miss into the hit that gave Intrepid his Sturdy back; Focus damage that set up Oracle's demoralise; and the target call the plan was built on. Fourth on arrival, close behind three veterans.

5 Intrepid 6.5

ALL-TIME He holds the line so that four fragile people can operate behind it: passive synergy of high value, with historically little interaction with anyone's specific abilities. Session 14 added the first active thread, guiding Lock-Step's whip and telling him when to swing.

SESSION 16 **holds at 6.5** His Banging Heads collapsed Argent's force field, he aided Edge's first shot, and the two best moments of his fight came on Edge's aid. **The new member's kit and his fit together from the first afternoon.**

4.21 Overall Combat Value / Contribution

Not raw power — contribution to the team winning and surviving. This axis and the next are deliberately different questions, and the difference is the point.

1 Oracle 9.0

ALL-TIME **He is the reason nobody has died.** Let's Go held Quasar-Force conscious at −11, Never Surrender pulled Intrepid out of a demoralised stun, Healing Hands resets the party between engagements, Real Jinx absorbs enemy actions passively, and Danger Sense gets him a turn in every bonus round. Session 14 showed his absolute floor: grabbed, blinded and drained to 3 Focus, he still dodged an invisible attacker, landed Return Fire, made Real Jinx eat a brain drain and redirected the swing that freed him. Session 15's resonance with the team's teleporter added a tenth.

SESSION 16 **8.8 → 9.0 (+0.2) He opened the fight, kept it going and ended it.** The super-Marvel stun on the agreed first target came first. Knocked out by 72 in Round 2, he was back in Round 3 with *"Drop me again, it was worth it"* and a stun on Dragonborne. Let's Go kept Quasar-Force on the board for the second half of the fight, the demoralise in Round 7 sent Dragonborne running, and his healing afterwards made the extraction possible. FLAG Two advances, still undeclared.

2 Edge 8.7

DEBUT · SESSION 16 **Second on arrival.** He named the first target. He knocked out Blood Blade, the member of the brood who had stolen Intrepid's power. He put 101 into Stote in one action, so that Quasar-Force's crush could finish him. He dealt 107 Focus damage across three Suppressive Fires, the last of which set up the demoralise. He turned a Marvel miss into the hit that returned Intrepid's Sturdy. He destroyed the device the brood had come for, and he held the rear so the extraction could happen. Down once, at exactly 0, and back up.

3 Lock-Step 8.4

ALL-TIME Insertion and extraction nobody else can provide, the decisive blow on more named villains than anyone, and a surrender ritual that has ended fights before they started. Session 14 was his best sustained combat performance: five disciplined rounds against the hardest target the team has faced, the stun that freed the healer, four assists accepted and converted, and the post-combat heal. He remains docked for the two Berserk episodes and the non-consensual extractions. Melee 7 and a whip that reaches phasing targets (Session 15) widened what he can contribute.

SESSION 16 **8.1 → 8.4 (+0.3)** He knocked out Argent in the first round — the plan's target, finished — and put 69 into Blood Blade in Round 3. He took the healer out of the fight unconscious, and brought everyone home at the end. Against it, he was one-shot from full while alone outside and was out from Round 4 to the end. **No Berserk, and the one extraction of a conscious teammate was asked first.**

4 Quasar-Force 8.2

ALL-TIME Control that removes named opponents for multiple rounds, mobility that repositions the whole team, an assist economy that converts teammates' misses into hits, barriers that shape the battlefield, and joint-highest base damage. **What caps him is not contribution but survival: he cannot stay standing long enough to deliver a full engagement's worth of it.** Session 15 moved the floor (H-DR 3, defences 19/19/15, the best passive mental profile on the team) without solving it.

SESSION 16 **8.4 → 8.2 (−0.2) The cap, demonstrated by an enemy that planned for it.** In four turns he grabbed Argent through her force field and held her for the knockout, pinned Dragonborne, crushed Stote unconscious, and kept working from cover at 13 Health. Then a glitch bomb took him out for the last four rounds. **The brood said in the fight that he was its first target because of what he does when he is standing.**

5 Intrepid 8.0

ALL-TIME He absorbs the damage that would kill anyone else on the team, and he ends fights outright: Session 14 opened with a Marvel on Umbra that removed the hammer from the board in one action. Then the aperture closed — a missed assisted target, a grab whose payload could not beat a force field, and a stun he could not shake. Session 15's sheet (210 Health, 20/20/20, Healing Factor 7, the only area attack left on the roster) lifted him to 8.0, untested.

SESSION 16 **holds at 8.0** He absorbed 290 damage, collapsed Argent's force field, punched Dragonborne for 28, took his own power back with a Smash Marvel stun, and refused to leave. He knocked out nobody and went down twice. **The fight's worst damage went to him, which is what he is for, and none of its knockouts did.**

Volatile: positions two through five are separated by 0.7, **and the newcomer is second.** Session 16 moved Oracle up and Quasar-Force down for the same reason: one stayed in the fight and one could not. The inversion with 4.22 holds at both ends.

4.22 Overall Combat Power / Potency

Raw capability to impose an outcome by force, as distinct from 4.21's contribution. Compare the two orderings.

1 Intrepid 8.3

ALL-TIME Elite physical durability, elite area damage, elite single-target damage, elite stamina, and the best objective-holding on the team via Immovable: **the highest raw combat output on the roster.** It fell in Sessions 13 and 14, both times on the same component — Crushing Grip landed cleanly on two opponents and accomplished nothing either time — and the Rank 3.5 advance reversed the decline. The number of things he can do with his weight is unchanged; there is simply more weight.

SESSION 16 **holds at 8.3** The weight showed: 290 damage absorbed. So did the limit: a power thief took his Sturdy and put him down, and a flying brick of his own class hit him for 72 and 60 and was never put down in return.

2 Edge 7.9

DEBUT · SESSION 16 **A specialist's potency.** Tied for the best base damage on the team and the best ranged attack on it, a free Focus-damage line at ×7, a dodge that strips Marvels, a healing factor and the only Heightened Senses on the roster. Against it: 90 Health, no area attack, no control, no movement power and middling mental defences. VOLATILE The legend and the Cutting Edge's unapplied +1 are both upside the score does not count.

3 Quasar-Force 7.8

ALL-TIME Best crowd control, best grappling, best personal mobility, best combat synergy, best objective creation, and joint-highest base damage. Against it: paper Health, no healing of any kind, effectively no area damage, and a demonstrated one-strike removal from full to unconscious. **His ceiling is the highest on the team, and his floor is the reason it is rarely reached.** Session 15 was the first revision in which the floor rose.

SESSION 16 **holds at 7.8** The ceiling showed in four turns, and the floor in two strikes.

4 Lock-Step 7.5

ALL-TIME Best mental durability, best team mobility, best de-escalation, best rescue and the highest Fantastic rate in the party, plus second place on Healing since Session 14. He is held down by a Focus pool tied for the shallowest, fragile Health, damage that belongs to the whip rather than to him, and Berserk. He passed Oracle on this axis in Session 14, and since Session 15 he carries the one weapon on the roster that reaches a phasing target.

SESSION 16 **holds at 7.5** The whip landed on people this time — 84 and a knockout on Argent, 69 on Blood Blade — and a single glitch bomb removed him from full. Both halves, as scored.

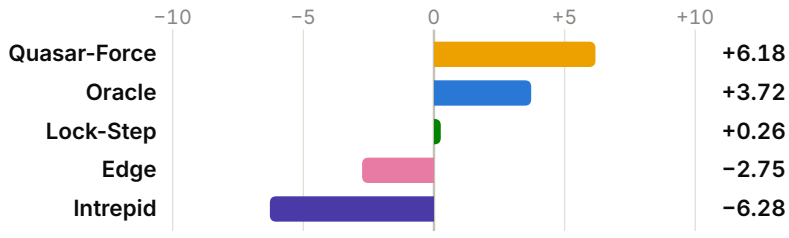

5 Oracle 7.2

ALL-TIME First on more of the twenty-two combat sub-axes than anyone else. What sinks him on raw potency is three narrow weaknesses — Focus durability, Stamina and Grappling — which Session 14's opponent hit with two effects, a grab and a drain. **A character whose weaknesses are narrow and known is a character an opponent can build against, and somebody did.**

SESSION 16 **holds at 7.2** He is first on seven combat sub-axes after Session 16 — Reaction, Ally Buff, Enemy Debuff, Healing, Collateral Avoidance, Non-Lethal Precision and Combat Value — having lost Ranged to the newcomer. The brood did not use the counter-build; it knocked him down with 72 physical damage, and he got up. FLAG Two advances are banked and undeclared. If either buys a mental power that projects strength, or Uncanny, this entry is understated.

Read this against 4.21 and the inversion holds. Oracle is last here and first there; Intrepid is first here and last there. **Edge is second on both, the only member whose contribution and potency agree.** The spread on this axis is 1.1 points top to bottom, as it was in Session 15.

§5 Non-Combat Power / Ability / Value

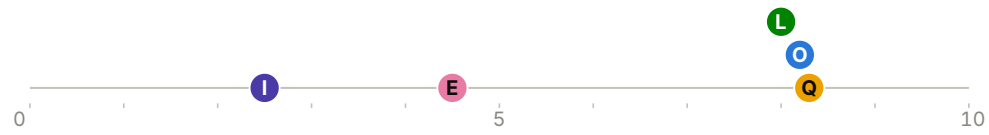

Section mean on the composite scale, −10…+10 (§10.1.3)

Session 16 was a fight with a short planning scene outside the warehouse, so this section moved less than any other in the revision: three axes among the returning four. The new evidence is mostly Edge's. Heightened Senses 2 restores, on paper, the counter-infiltration and innate-senses capability that left with Exemplar II, and his Ego 4 is the second-highest social ability score on the team. His Logic of −1 is the lowest on the roster, and it puts him level with or below Intrepid on every Logic-driven axis. Where the two tie on those axes, the tie is broken on Logic.

5.1 Leadership / Organization

Running things, as distinct from being followed — see 3.6–3.8 for command.

1 Quasar-Force 8.3

ALL-TIME **Organisationally the best on the team, and long unwilling to command.** In Session 14 he started the entire Titans Tower security programme, specifying the requirement — block teleportation and phasing while preserving the League transport already in the building — and recruiting the one specialist on the station qualified to build it. Session 15 was the first session in which he also ran things: a six-day engineering programme delivered in priority order in someone else's facility, then a layered surveillance operation on Day 56 — two drones in his normal pattern, a plate trace to a named STAR Labs executive, a stealth drone left in a warded garage, a tail on the drop-off, and a scout sent ahead to the warehouse on the strength of Oracle's forecast.

SESSION 16 **holds at 8.3** The organising he did was intelligence: the drone sweep that found the five searching crates, the deduction about the progeny's powers, and a proposal for a sneaky entry that the team did not take.

2 Oracle 8.2

ALL-TIME He runs the household on a schedule, staffs the medic station, keeps the patrol rota and files honest reports. He has acted unilaterally on principle, which is where organisation becomes leadership, and he has run two sessions outright. In Session 14 he made the client call nobody else wanted to make. In Session 15 his organisational contribution was the forecast, which gave the room a probability, an actor, a timeline and a destination to plan around.

SESSION 16 **holds at 8.2** The plan came from him, after he had first said there wasn't one, and it is scored in 3.2 and 3.7.

3 Lock-Step 8.0

ALL-TIME He leads by acting first. For most of the campaign he organised nothing, and the team followed him because he moved. Session 14 brought real staff work in a facility he did not control, and the team's only mission-vetting proposal. Session 15 was the largest movement on this axis: preparation before first contact, a team huddle at the Watchtower that diagnosed the gap correctly ("*it's not like they have smarter people… they just have better resources*"), a week-long social-media operation run as a production, and on Day 56 a division of labour across three parties under a 24-hour clock. He also called, for the first time, for "*a group discussion*" before a decision. Against: the decision the discussion produced.

SESSION 16 **holds at 8.0** He handed the plan to Oracle and ran the exit. The organising he did before the fight was complaint rather than organisation — about Iron-Side, the League and the adults — and two of its claims were wrong.

4 Edge 4.5

DEBUT · SESSION 16 **The newcomer made the team plan.** "*Do we have a plan for when we enter this place?*" and "*Can you tell me the situation, please?*" were the two questions the team had not asked itself, and when the plan came together, its target was his. One afternoon, Logic −1, and no record of running anything yet.

5 Intrepid 2.5

ALL-TIME The roster notes that he tries to lead and is not always the right man for the job; the attempts are visible and nothing lands. His most useful organisational remark came a day late in Session 14 ("*did we do any research on the items we were protecting at all*"), and the answer was that they had. Asked for a plan on Day 56: "*I got nothing.*"

SESSION 16 **holds at 2.5** Asked for a plan: "*Nothing, I guess.*"

5.2 Engineering & Crafting / Fabrication & Repair

1 Quasar-Force 9.8

ALL-TIME Uncontested. Logic 7 with Brilliance 4 gives an effective +11, on top of Inventor, Scientific Expertise and lab access at three sites. He runs and modifies the drone fleet, rewrote its security after the Destined breach, and once built four new drones in a three-day downtime window. Session 15 was the most productive week of engineering in the campaign: a signal-masking circlet of "*Metamaterial-infused Hastelloy C-22*" with "*new-god based circuitry*" that also provides Uncanny 3; an anti-teleportation device that defeated the Destined's transport in play; a nanosuit upgrade to Sturdy 3 with the League's specialist; and two drones for Lock-Step's streaming. **Three GM-approved builds from one week of downtime is the strongest engineering evidence this document has had for anyone.**

SESSION 16 **holds at 9.8** No downtime and no builds. The circlet passed its first field test (4.2).

2 Oracle 4.5

ALL-TIME Logic 3 with Tech Reliance and Eidetic Memory, and he understands the STAR Labs systems he is built from well enough to interface with them. He has not been shown building anything. In Session 14 his hardware was named as a component of somebody else's build. **He is not the engineer; he is part of the bill of materials.** Since Exemplar II left, the gap from first to second on this axis has been 5.3 points.

SESSION 16 **holds at 4.5** Nothing changed.

3 Lock-Step 1.0

ALL-TIME Logic 0. He recognises when technology is valuable and cannot do anything with it himself, but he knows who to ask: "*Quasar, can you make her a helmet? For telepathy?*" was the right request to the right person.

SESSION 16 **holds at 1.0** Nothing changed.

4 Intrepid 0.5

ALL-TIME Logic 0. His offer to a security discussion was to squeeze objects until they broke, and in Session 14 he said, accurately, "*I don't have any tech skills.*"

SESSION 16 **holds at 0.5** Nothing changed.

5 Edge 0.5

DEBUT · SESSION 16 Logic −1. His iconic weapon is Constructible, which describes the item, not a skill.

Tie: Intrepid over Edge at **0.5**, broken on Logic (0 against −1).

5.3 Cyber & Information Warfare & Security

1 Quasar-Force 9.3

ALL-TIME He rebuilt the drone fleet's security architecture after the Destined breach, rotated every code, established three geographically separate archives, and fields a communications-blackout electronic-warfare suite he has used operationally. Nightwing credited him by name. Fade-Out conceded the code changes "*were a pain in the neck*" and explained why it did not matter ("*Dick Grayson designed the system*"), and the correct response, changing the physics rather than the credentials, is exactly what he did. Session 15's circlet is information security at a level nobody on this team had operated at: passive cloaking and active jamming that hides a New God signature from a New God. NOTE In Session 14 the supervillains did not appear on the drones' infrared at all.

SESSION 16 **holds at 9.3** **The Session 14 infrared blind spot did not recur.** His drone's infrared found the five spread through the warehouse searching crates before anyone went in. One success against these opponents does not close the gap against the ones who beat it.

2 Oracle 4.5

ALL-TIME He interfaces with STAR Labs systems and monitors media, but carries Tech Reliance as a vulnerability rather than a skill and has built nothing. In Session 15 the module was logged for the first time as a network interface ("*I'm actually interfacing with the internet right now*") running alongside his precognition — not intrusion, but information gathering through a channel no teammate has.

SESSION 16 **holds at 4.5** Nothing changed.

3 Lock-Step 3.0

ALL-TIME Logic 0. On the *security* half of this axis he is the team's single largest liability (§1.6). Session 15 showed that the *information warfare* half is his: a broadcast set trending on command with an Ego check of 20, a week-long influence operation run with a co-producer, and a seeded channel for every teammate. **That is audience manipulation at scale.** His security record is why this is 3.0 and not higher.

SESSION 16 **holds at 3.0** No broadcast is recorded.

4 Intrepid 0.5

ALL-TIME Logic 0, and his contribution to the post-breach security discussion was to offer to squeeze objects until they broke.

SESSION 16 **holds at 0.5** Nothing changed.

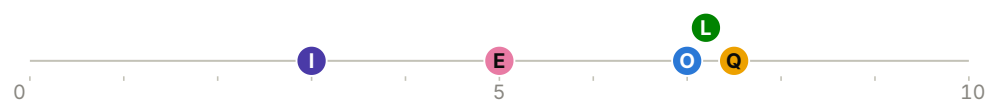

5 Edge 0.5

DEBUT · SESSION 16 Logic −1, and nothing on the sheet or in the log touches this axis.

Tie: Intrepid over Edge at 0.5, broken on Logic.

5.4 Field Investigation, Forensics & Intelligence Gathering

On-scene work, canvassing, tailing, source handling, and human intelligence.

1 Quasar-Force 7.5

ALL-TIME A laboratory mind doing field work by remote, and doing it well: stealth drones with hyper-spectral and infrared reconnaissance, an electronic-warfare blackout suite, and the tradecraft to phone in a false noise complaint so a patrol car would occupy a front gate. In Session 13 he read a technopathic intrusion off nothing but four drones drifting out of position. In Session 15 he took first, partly on the vacancy, with the best remote surveillance of his campaign — the juveniles watched, the plate traced to STAR Labs' CFO, a stealth drone in a warded garage, a tail on the drop-off — and **he stated the evidentiary status of each finding accurately every time.**

SESSION 16 **holds at 7.5** The drone sweep before entry, and the deduction that the progeny had not yet given the five full access to their new powers. Both were right.

2 Lock-Step 7.2

ALL-TIME Elite human intelligence and nothing else. He got the nightclub location out of a mob lieutenant over Polish cake, the midnight deal location out of a captive, and the warehouse intelligence out of the Burnout Kings. People tell him things they would tell nobody else on this team. Session 15 held the tradecraft failure of his campaign: he broadcast a surveillance operation to the public, zooming on the targets' faces and telling viewers "*Stay tuned.*"

SESSION 16 **holds at 7.2** No sourcing. His briefing to the newcomer contained two errors of fact — that Nightwing had not filled Edge in, and that the adults had told Quasar-Force to fix things — which is the opposite of intelligence, but it was talk among teammates.

3 Oracle 7.0

ALL-TIME Sent to look at a museum in Session 13, he produced what a professional would: every entrance, an underground approach nobody asked about, an accurate security posture, and an independent sighting of somebody casing the building. Vigilance 6 is the highest on the roster, and precognition is reconnaissance by another name. Session 15 brought the most operationally specific forecast of his campaign, and on Kwa the question that determined the progenitor's threat model.

SESSION 16 **holds at 7.0** The forecast was right: the five went to the warehouse it named. His own briefing of the situation to the newcomer drew "*Ok, that told me nothing.*"

4 Edge 5.0

DEBUT · SESSION 16 **The instrument is excellent and the operator is new.** Heightened Senses 2 lets him sense four times as far as normal, gives him a double edge on Vigilance checks to perceive, and lets him listen to a person's heartbeat to see whether they are lying — "*as reliable as a traditional lie detector.*" Against it, Logic −1 and no investigative record. He also arrived briefed: Nightwing had told him about the five, which the team did not know.

5 Intrepid 3.0

ALL-TIME He found the Insidious nest by walking around and looking, which is a real contribution and an unskilled one. In Session 14 he gave Wonder Woman an accurate description of the stolen artifacts. In Session 15 he tailed a limousine across the city by air without being spotted.

SESSION 16 **holds at 3.0** Nothing changed.

5.5 Lab Investigation, Forensics & Data Analysis

Bench work, document analysis, data synthesis, and evidence handling.

1 Quasar-Force 9.5

ALL-TIME Logic 7 with Brilliance 4, and a results record nobody else approaches: checks of 20, 21, 22, 24 and 25. He decoded the containment release mechanisms, found and interpreted the medical report on the bane derivative and its non-terrestrial component, analysed the temporal artifact down to its purpose and its transmission, and built the whole Lex-Corp evidence chain. In Session 14 he worked out that the mother box's "*Oh No*" was a panic-driven reproduction of his own mother's voice. **That is forensic reasoning applied to the inside of his own skull.** In Session 15 he connected Kwa to the present the moment Shein Qua spoke, and he still holds the team's memory of where the evidence chain stands.

SESSION 16 **holds at 9.5** The deduction about the progeny's powers was bench reasoning done in the field, and it held up.

2 Oracle 7.0

ALL-TIME **Eidetic Memory is a serious analytical instrument**: perfect recall of every document, scene and conversation the team has encountered. In Session 14 he produced the names of what had been stolen while the room was still arguing. Session 15 produced a genuine analytical product: the module's conclusion that Lock-Step's powers are "*based on lantern technology / magic,*" linked to Oa and the Grey Lanterns, and work "*by unconsciously altering time waves*" — **the first explanation anybody on this team has produced of what Lock-Step actually is.**

SESSION 16 **holds at 7.0** Nothing new. VOLATILE The device the brood came for was keyed to Lock-Step's time manipulation, which is the module's subject, and it was destroyed before anyone could look at it.

3 Lock-Step 1.0

ALL-TIME Logic 0. He recognises when data matters and can do nothing with it.

SESSION 16 **holds at 1.0** Nothing changed.

4 Intrepid 0.5

ALL-TIME Logic 0, and no engagement with the analytical side of any case.

SESSION 16 **holds at 0.5** Nothing changed.

5 Edge 0.5

DEBUT · SESSION 16 Logic −1, and no engagement with the analytical side of the case. He destroyed the one piece of physical evidence the fight produced, which was the right call in the moment and is scored in 4.6.

Tie: Intrepid over Edge at 0.5, broken on Logic.

5.6 Law & Legal Skill / Ability

A live operational front: a cease-and-desist on record, a threatened wrongful-death suit, an open police investigation, Lex-Corp counsel engaged, a juvenile-privacy exposure and a solicitation — to which Session 16 adds a minor left cuffed in a crime syndicate's warehouse.

1 Quasar-Force 5.0

ALL-TIME A diligent amateur, and diligence counts for a lot here. He quotes the Public Conduct and Powers-Use Standard from memory, keeps genuine chain-of-custody discipline, and walked into a police station to give a statement rather than being summoned. Against that, he argued statute with a corporate lawyer while unqualified, and as a minor he has no standing of his own. He took first in Session 15 on the vacancy left by the team's only professional investigator. **Against, in the same session:** he endorsed sending a villain team to break into a research facility. **The only member of this team who understands evidence voted for the burglary.**

SESSION 16 **holds at 5.0** Nothing changed.

2 Lock-Step 3.5

ALL-TIME The only member who worked out that this team needs professional lawyers and said so out loud. Session 13 added two protective instincts — that employing minors is unlawful in most states, and that a fourteen-year-old cannot consent to agreements adults float over his head — and Session 14 a standing pre-acceptance questionnaire. In Session 15 he analysed the juveniles' release and the garage break-in correctly, and then contracted the breaking and entering out with a killing attached. **Knowing where the line is and paying someone to cross it is still, technically, knowing where the line is.**

SESSION 16 **holds at 3.5** He stated the rule of engagement correctly — Nightwing "*did say we can bring them back, so knock them out*" — and then left a cuffed minor in a mob warehouse. The exposure is scored in 2.5.

3 Oracle 3.0

ALL-TIME No formal knowledge and correct instincts. Demanding surrender before engaging is, among other things, the legally correct posture, and he does it every time without being told. In Session 14 he reported a loss immediately, in his own words, to the principal.

SESSION 16 **holds at 3.0** Nothing changed.

4 Intrepid 1.0

ALL-TIME No engagement with the subject whatsoever.

SESSION 16 **holds at 1.0** Nothing changed.

5 Edge 1.0

DEBUT · SESSION 16 No engagement with the subject. His one legal fact is a public identity that is "*not very well known.*"

Tie: Intrepid over Edge at 1.0, broken on Logic.

5.7 Medical & Medical-Diagnostic

1 Oracle 9.5

ALL-TIME The team medic in every sense that matters. He triages, treats, rations and makes the hard calls: in Session 9 he deliberately under-healed a teammate to preserve reserves for a raid. He heals Quasar-Force to full before every deployment, revived the man Intrepid nearly killed, and attempted to revive the man Quasar-Force killed. The cooking belongs on this axis too. Session 14 tested the supply chain rather than the capability (§4.15).

SESSION 16 **holds at 9.5** **The triage call of the session was his.** He put 15 Health into Quasar-Force at −30 knowing it would not bring him back, kept him within range of Let's Go, and then moved Let's Go to Lock-Step at the moment the team's exit depended on Lock-Step being conscious.

2 Quasar-Force 6.5

ALL-TIME Not a clinician; a strong diagnostician. He interpreted the medical report on the bane derivative, identified the non-terrestrial component nobody else spotted, and proposed the airborne-spore screening that caught three infections. In Session 14 he diagnosed his own panic response as foreign while it was happening. In Session 15 he was a co-investigator on his own biology with the League's specialist, and he remembered that "*we were able to cure the other kids*" — **the precedent that turns five infected teenagers into patients rather than casualties.**

SESSION 16 **holds at 6.5** The five are still infected, and three of them are unconscious in a warehouse. The precedent has not been applied.

3 Lock-Step 3.5

ALL-TIME Practical pharmacology first: he sedated a teammate twice at a dose that worked without visible harm. Session 14 brought the first therapeutic act of his career, a hex configured into healing and calibrated to "*the minimum amount allowed that will wake him up.*" Dosing to the endpoint you want is the same skill as the sedative, pointed the other way for once.

SESSION 16 **holds at 3.5** Not used.

4 Intrepid 1.5

ALL-TIME Aspirin, ice cream, and a working knowledge of what hurts.

SESSION 16 **holds at 1.5** Nothing changed.

5 Edge 1.5

DEBUT · SESSION 16 A healing factor that works on him alone, and nothing for anyone else.

Tie: Intrepid over Edge at 1.5, broken on Logic.

5.8 Stealth & Infiltration Capability

1 Lock-Step 8.0

ALL-TIME Teleportation *is* infiltration. He goes through walls, fences, guards and shielding, and he inserts the whole team behind a defended perimeter. Session 14 was the purest concealment-by-relocation on record: four insertions, three withdrawals, and not one enemy action directed at him. Against: he botched a blind teleport in Session 1, and he is loud by temperament. Session 15 took half a point for the man rather than the power: after a viral stream and a week of broadcasts he is the most recognisable face on the roster after Quasar-Force.

SESSION 16 **holds at 8.0** Blink and teleport, in and out, all fight.

2 Quasar-Force 7.8

ALL-TIME Personally the least stealthy person on the roster — he glows, hovers and has a public identity — and **the owner of the team's entire infiltration toolkit**: stealth-mode drones with hyper-spectral vision, infrared reconnaissance, an EW blackout suite, and fake-noise-complaint tradecraft. Session 15 gave him the one concealment that matters most to him, a New God signal mask, and the best covert surveillance on his file.

SESSION 16 **holds at 7.8** He proposed the sneaky entry, and the team chose the ambush. Inside, he hid behind a shipping container, and Blitzkrieg found him: "*What's ya doing, Hiding?*"

3 Edge 4.0

DEBUT · SESSION 16 His roster role is *Precision Marksman & Spatial Infiltrator*, and the sheet supports the first half. He has no stealth powers, white hair and eyes that glow, and a public identity. Agility 7 and Situational Awareness are the case for him; his real contribution to this axis is the opposite capability — making it hard for anyone else to sneak — which is scored in 5.9.

4 Oracle 3.5

ALL-TIME Tactical gear and Vigilance 6, no stealth powers, and an Extreme Appearance that means anyone who sees him remembers him. He cased a museum for a full day without being made, which is the whole of the credit.

SESSION 16 **holds at 3.5** Nothing changed.

5 Intrepid 1.0

ALL-TIME Six foot four, 301 pounds, a floor-length red cape and a metallic gold "I" on his chest. His Secret Identity protects his civilian life, not his approach. In Session 15 he tailed a limousine across the city without being spotted, in a red cape at altitude.

SESSION 16 **holds at 1.0** Nothing changed.

NOTE *The team's counter-infiltration capability is back, on paper.* Last revision this note recorded that Heightened Senses 2 left with Exemplar II and that nothing on the four remaining sheets did what it did. **Edge carries the same power:** enemies have double trouble on checks to sneak past him. Nothing tested it in Session 16. §10.4 carries the finding as answered on paper.

5.9 Sensory & Environmental Awareness

1 Oracle 9.0

ALL-TIME Vigilance 6 with a Vigilance defence of 16, Danger Sense guaranteeing him a turn in every bonus round, Precognition 1 for a 24-hour lookahead, Intuition, Charmed Life, Real Jinx and Combat Reflexes. **He literally sees things before they happen.** Session 14 showed both halves: the module gave him the lead to dodge an attacker he could not see, and then he failed to pinpoint Veil, could not see through the fog, and was the only person in the room who did not know an astral figure was standing over Quasar-Force. **Precognition tells you what is about to happen. It does not tell you what is in the room.**

SESSION 16 **holds at 9.0** The forecasting half was right about the warehouse, and the module kept its Marvel on initiative.

2 Edge 8.0

DEBUT · SESSION 16 **The best innate senses on the team, at the score Exemplar II left at.** Heightened Senses 2: four times normal range, the ability to compensate for a lost sense with the others, a heartbeat lie-detector, a double edge on Vigilance checks to perceive, and double trouble for anyone sneaking past him. Situational Awareness and Combat Reflexes sit beside it. Against it, a Vigilance of 3. Second on arrival: **he tells you what is in the room, which is the half Oracle's module does not.**

3 Quasar-Force 7.0

ALL-TIME Vigilance 5 and a sensor suite that outperforms most innate senses: hyper-spectral drones that defeated Shroud's darkness outright, a 21 on a camera sweep, a technopath detected from the drift of his own drones, and tactile awareness of objects at range through telekinetic contact. Session 14 was the first time the instrument model lost to an innate one — the villains did not show on infrared. He also has one sensory channel nobody else has: the box speaks to him.

SESSION 16 **holds at 7.0** The infrared worked this time, and showed the five searching crates.

4 Lock-Step 3.5

ALL-TIME Vigilance 2, a Vigilance defence of 15 from Uncanny 3, and a genuinely good suspicion instinct: he identified the mentalist among five costumed villains, and flagged Iron-Side's convenient absence during the Destined incursion. He did not know his own building had a library.

SESSION 16 **holds at 3.5** Nothing changed.

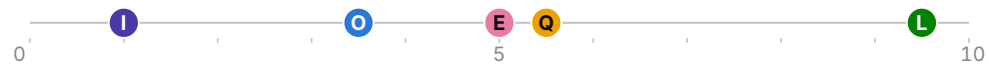

5 Intrepid 2.5

ALL-TIME Vigilance 3, a defence of 14, and no sensory powers. A 19 on museum watch is the only thing this axis has ever credited him with. He did know about the library.

SESSION 16 **holds at 2.5** Nothing changed.

NOTE *The best innate senses on the team are back.* Last revision ended this axis by saying that the team that next faced Veil or the Vapors of Galator had nobody who could see the room. **It now has one person who might**, and nobody has yet tested him.

5.10 Social Engineering, Espionage, Grifting & Interrogation

1 Lock-Step 9.5

ALL-TIME Ego 7 — the highest social ability score on the team by three points — and a record to match. He got the nightclub location out of a mob lieutenant over Polish cake, talked the Burnout Kings into standing aside, negotiated the Destined out of the lobby, and has produced repeated bloodless captures. **He is the only member of this team who is good with people.** His one genuine loss came in Session 14, when he tried to grift souvenirs off a founding member of the Justice League and ended up in the Lasso of Truth. Session 15 was the best social performance of the campaign across four very different targets: an alien apex-predator telepath worked to a settlement, a cosmic officer who had built the scenario to test him, a public audience set trending on an Ego check of 20, and Fade-Out brought in to do the job. **In Session 15 he was good with non-people as well.**

SESSION 16 **holds at 9.5** The cuffs almost worked on a mind-controlled telepath: Argent "*seems to start to 'accept'*" before her controller reasserted itself. With his own side, he got the most honest exchange of his file out of a conversation he started as a rant.

2 Quasar-Force 5.5

ALL-TIME Not manipulation; arguably its opposite, and it works anyway in a narrow band. Compassion, reciprocal information-sharing and transparent sincerity get wronged people talking, and they produced the Guy Gardner channel. In Session 14 they turned a League specialist from an examiner into a collaborator inside one conversation. Session 15 produced "*an exchange of truth… with telepathy*" and got Wonder Woman and a Green Lantern to answer within minutes on a Saturday. Against hostile professionals he gets red-herringed. Ego −2; he cannot deceive and does not try.

SESSION 16 **holds at 5.5** He judged correctly that the five could not be talked to, and did not try.

3 Edge 5.0

DEBUT · SESSION 16 **Ego 4, the second-highest social ability score on the team**, and a Monster trait that gives him an edge to intimidate. He used it once, on the two villains still standing, and "*they don't budge*" — against opponents whose will was not their own. With his new teammates he was tactful under a stranger's rant ("*I don't want to break your hope*") and direct when it mattered ("*Ok, that told me nothing*"). Third on arrival, on the ability score and the trait rather than on a record.

4 Oracle 3.5

ALL-TIME Ego 0 and an Ego defence of 10. He speaks plainly, demands surrender and coordinates clearly, and twice — in Sessions 12 and 14 — he did the most effective social act in the room by naming the thing everyone was talking around. On Kwa he conducted the interrogation that mattered, in two questions. Honest rather than persuasive, and occasionally that is the more useful of the two.

SESSION 16 **holds at 3.5** "*Don't worry, the bar is low, it's alright*" was the right line for a newcomer; his briefing of the situation was not.

5 Intrepid 1.0

ALL-TIME Ego 0 and no social traits. His own contribution to one interrogation debrief was that Shadow-Boxer would have got nothing but fist from him. The most socially deft line in his file is "*Sometimes*," his answer when the progenitor asked whether he was Superman.

SESSION 16 **holds at 1.0** "*Yeah.*"

5.11 Domestic Utility & Skills

1 Oracle 9.0

ALL-TIME He is the household. He cooks buffet-style, adjusts the menu on request, times breakfast around who wakes when, and personally makes sure the fourteen-year-old actually eats. Nobody else contributes anything comparable, and when the household moved to a Justice League guest suite with a robot doing the catering, he was still the one telling people to rest.

SESSION 16 **holds at 9.0** The session ends with the team going to the underground bunker to recover, on his heals.

2 Quasar-Force 7.0

ALL-TIME Enormous utility and near-zero chores. Telekinesis is the ultimate domestic force multiplier: he moved Exemplar's entire office single-handedly and works objects at range by reflex. PARTIALLY OOC His suit self-cleans, self-repairs and manages waste, and in Session 14 it sealed a stab wound and cleaned the blood off itself before he reached the infirmary. He will not cook.

SESSION 16 **holds at 7.0** Nothing changed.

3 Lock-Step 3.0

ALL-TIME Cocoa Puffs, Instagram Day, popcorn with red licorice for a stakeout, and a standing promise of black licorice for Quasar-Force. Genuine morale value and zero reliability. His Session 14 contribution was establishing that the Justice League's space station has Wi-Fi.

SESSION 16 **holds at 3.0** "*Maybe I just need another party.*"

4 Edge 2.5

DEBUT · SESSION 16 He has moved into bedroom 3, the room that was Exemplar II's, and nothing about his life in the tower is on record yet. A student with School as an Obligation and grades that were "*already bad.*"

5 Intrepid 2.0

ALL-TIME He makes his own oatmeal, breaks things, and offers to squeeze household objects until they fail. Pleasant, willing, and hazardous near anything fragile. He knows where the library is.

SESSION 16 **holds at 2.0** Nothing changed.

5.12 Teaching & Mentorship

1 Oracle 7.5

ALL-TIME He teaches by structure and by example. He runs the routine everyone else lives inside, he showed that a person on this team can say no to Lock-Step and survive it, and he is the person a younger teammate would actually approach. Session 15 gave him an explicit tutoring role: the module's resonance with Lock-Step's powers lets him "*give advice and assistive edges in learning to use any powers he may unlock in the future*," and he gave the first lesson. **The teammate a younger member would approach is now the designated tutor for the most volatile power set on the team.**

SESSION 16 **holds at 7.5** His one teaching moment was a briefing for the newcomer — an alien influence, and "*we are trying to change the course of how that alien evolves to not become a nemesis*" — and the newcomer's verdict was "*Ok, that told me nothing.*" FLAG Edge's roster tags list *Mentor (PC: Oracle)*. His backstory reads as Barbara Gordon ("*she called the Birds*"), and nothing in Session 16 shows the two had met. If the tag is meant, it is a second tutoring role; it is not scored until play shows it.

2 Quasar-Force 7.1

ALL-TIME He explains constantly and enthusiastically to anyone who will listen, shares intelligence unprompted, and models genuine curiosity. In Session 13 he briefed Lock-Step on the one threat that endangered him alone, and in Session 14 he corrected a Justice League scientist's professional manner and she changed how she spoke to the room. In Session 15 he corrected Lock-Step's plan to take over a hive. **He is undercut by being the youngest person present and reading younger still** — "*Is she going to listen to you? Like no offense? We're like kids.*"

SESSION 16 **holds at 7.1** **He gave the newcomer the one-line version Oracle could not:** "*If he has his way, the whole planet will become part of his brood.*"

3 Lock-Step 4.0

ALL-TIME He established the surrender ritual as de facto team doctrine, which is teaching whether or not he meant it as such. His Session 14 instruction to a teammate was that he was a coward, repeated until it worked. Session 15 was better: a principle ("*You don't punish the [bunch] for one bad apple*"), which Quasar-Force took, and an unprompted "*consent is everything.*" Against: "*That's why I don't get a job, kids, live your life.*"

SESSION 16 **4.5 → 4.0 (−0.5)** **The first lesson he gave the newcomer was that the adults are trash.** In his first minute with Edge he taught that "*all the adults are trash*," that Iron-Side "*lived in the security room*," that the adults had told a twelve-year-old to fix things (Quasar-Force: "*You're mainly the one that told me to fix it*"), and that Nightwing had not briefed him (he had). Against it, the most useful thing anyone taught Edge that afternoon was also his: the rule of engagement, "*we can bring them back, so knock them out.*"

4 Edge 2.5

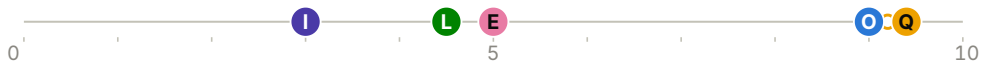

DEBUT · SESSION 16 Black Canary's student, with Quick Learner on his sheet. He has nothing to teach yet, and he was the one doing the learning.

5 Intrepid 2.0

ALL-TIME Nothing to teach, and no inclination to try.

SESSION 16 **holds at 2.0** Nothing changed.

5.13 Empathic / Emotional Support

1 Quasar-Force 9.4

ALL-TIME **Compassion is his defining trait, and it works on people who have no reason to respond to it.** Shadow-Boxer opened up to him, Cassidy Yanks gave her real name because he was kind, and World Ender's facade collapsed under sincerity. In Session 13 he told a seventeen-year-old who had just been used as a

weapon that his mother loves him. In Session 14 he aimed it at an alien machine intelligence with PTSD, and it landed. In Session 15 its main recipient was the entity inside him: he asked her permission before naming her and made her comfort a condition of the research.

SESSION 16 **9.2 → 9.4 (+0.2) He reached the teammate who never lets anyone in.** Against Lock-Step's run of "*Adults just suck*" he said, "*I like being hopeful. I want to help people get their happy thoughts back. You are not keeping your happy thoughts anymore.*" What came back was the first explanation of his cynicism Lock-Step has ever given — "*I just hope that one day, you get my happy thoughts back. Adults being adults and actually being helpful*" — and Quasar-Force answered it with a yacht party. He does it without technique, which is why it lands.

2 Oracle 9.0

ALL-TIME The team's caretaker in the full sense. He cooks around individual appetites, heals people to full before deployment, notices who is not eating, and holds the space where injured people end up talking. His protectiveness toward Quasar-Force is the clearest emotional attachment anyone on this team has expressed. In Session 13 he thanked Psyche for not letting the universe be destroyed, a sentence that did more work than any heal he has cast.

SESSION 16 **holds at 9.0** He put the newcomer at ease with one line, kept Quasar-Force on the board through the deepest knockdown of his file, and healed him afterwards.

3 Edge 5.0

DEBUT · SESSION 16 A tactful first afternoon. Met with a stranger's grievance about adults, he answered with care — "*I don't want to break your hope*," "*I'm sorry to hear that*" — rather than with agreement or argument. In the fight his support was practical, not emotional. Third on arrival on two lines; his backstory says he went looking for help when he needed it, which is a good sign for someone asked to give it.

4 Lock-Step 4.5

ALL-TIME Socially warm in a real way — the licorice, the popcorn, the video games — and attached to a willingness to override other people's autonomy that undoes most of it. Session 14 held the warmest and coldest things he had done, an hour apart. Session 15 held two of the warmest acts on his file: asking Quasar-Force unprompted whether he consented to being studied ("*consent is everything*"), and going back to check on the refugee before leaving. Against, the same pattern as always: teammates as content, and five teenagers' faces on the internet for laughs.

SESSION 16 **holds at 4.5** For: a warm welcome to a stranger, and the first consent question asked in a fight. Against: that welcome was also a lecture on how the adults had failed, and mid-fight he told the team that this is what happens when he stays with it.

5 Intrepid 3.0

ALL-TIME Cheerful, agreeable, and emotionally unavailable in both directions. He is going through something and has told nobody. The closest he has come was "*I feel like a coward*" in the middle of a Session 14 argument, which nobody in the room treated as a disclosure, including him.

SESSION 16 **holds at 3.0** Nothing in either direction.

5.14 Team Coordination / Interoperability

Working with powers, styles, and skillsets that are not your own.

1 Quasar-Force 9.5

ALL-TIME He has found a use for every teammate's kit: nudging Intrepid's strikes, placing Oracle on request, funnelling enemies toward the brawlers, handing negotiations to Lock-Step, and feeding the whole team drone reconnaissance before entry. In Session 13 a drone he built became the visualisation source for a teleport he cannot perform, and in Session 15 he built two drones for a teammate's use. **He adapts to other people's abilities more readily than to his own limitations.**

SESSION 16 **holds at 9.5** The drone sweep fed the plan, and he aided the newcomer's first shot. The grab on Argent was the platform for Lock-Step's finish.

2 Oracle 8.8

ALL-TIME He interoperates with everyone by construction: he heals whoever is hurt, buffs whoever is failing, and broadcasts warnings to the whole team. In Session 14, at 3 Focus and inside a grab, he redirected a teammate's swing off another teammate and onto the boss. Session 15's resonance gave him a sanctioned interface with Lock-Step's powers — coordination grounded in two characters' powers being compatible.

SESSION 16 **holds at 8.8** His module turned Intrepid's stomp into a hit, his Focus damage finished what Edge's had started on Dragonborne, and he aided the newcomer's first shot.

3 Lock-Step 7.8

ALL-TIME He physically integrates the team better than anyone, and socially degrades the advantage by moving people without consent. Session 14 was his best-integrated session: input from every teammate in one combat, all of it converted. In Session 15 he fitted the Kwa approach around Oracle's condition and built a plan across three parties. **Against:** the interoperability he arranged with the progenitor's network was imposed on two teammates rather than offered to them.

SESSION 16 **7.3 → 7.8 (+0.5) The stated deduction came off.** He asked before moving a teammate — "*Who is comfortable where they are at and who wants to move a little bit*" — took Intrepid's no, and came back for him later. He put Oracle inside Argent's sphere and finished the target Quasar-Force was holding, aided Edge's first shot, and ran an extraction that depended on Oracle's heals and Edge's rear guard.

4 Edge 7.3

DEBUT · SESSION 16 **Fitted in from the first round.** His target call was built around the team's kit, his first shot was aided by all four teammates, he turned two of Intrepid's attacks into better ones, his Focus damage set up Oracle's demoralise, and his rear guard bought Lock-Step the turns he needed. Level on arrival with Lock-Step's Session 15 score.

5 Intrepid 6.0

ALL-TIME He accepts positioning guidance from Oracle and Quasar-Force without ego, which is rarer and more valuable than it sounds in a character with this much raw power. In Session 14 the traffic ran both ways for the first time. In Session 15 he backed whoever was on point.

SESSION 16 **holds at 6.0** He aided Edge's first shot, took Edge's aid twice, and let Oracle's module steer his stomp.

5.15 Cross-Team / Institutional Alliance Capital

Ability to obtain resources from, and coordinate with, outside organisations.

1 Quasar-Force 9.7

ALL-TIME **Built entirely from nothing.** A working relationship with Blüdhaven PD, STAR Labs access through his father and in his own right, two loans of suppression cuffs, direct contact with Wonder Woman, an open channel to a serving Green Lantern, and a habit of posting intelligence to public superhero forums. Session 14 added a personal sanctuary offer from a founding member of the Justice League, a week of Watchtower access, and Doctor Tal Taleria volunteering to build him a signal mask. In Session 15 Wonder Woman answered his communicator at once and came to the tower in person, Guy Gardner picked up mid-fight, and the specialist offered to come back to Earth with him. OOC Also, unwillingly, a line to ARGUS. **He is the team's institutional switchboard.**

SESSION 16 **holds at 9.7** Nothing used, nothing lost. FLAG The roster still lists "*Exemplar's Dad's Lab*" among his lab-access tags; with Exemplar II gone, the tag should be treated as stale.

2 Lock-Step 7.2

ALL-TIME Extensive alliance capital, much of it in the wrong directions. The Marrow Syndicate will sit down with him, the Destined negotiate through him, the Burnout Kings stood aside for him, and three of the most significant magical figures on Earth hold positions on his future. In Session 14 his capital went measurably negative for the first time. Session 15 added alliances nobody else on this team could have made: the Grey Lanterns, the people of Kwa, the Destined (who now hold his words), and an audience he can move. Against: the Justice League, whose station he livestreamed without asking.

SESSION 16 **holds at 7.2** The Marrow Syndicate warehouse is now the place he left a cuffed teenager. The Destined errand has not reported back.

3 Oracle 7.0

ALL-TIME STAR Labs built his body and Nightwing takes his calls. Nightwing arranged him a private appointment with a STAR Labs board member, and in Session 14 he held the direct line to Wonder Woman in a crisis and used it. The capital is real, narrow and largely inherited, and its principal holder, Nightwing, has been absent from the screen since Session 14.

SESSION 16 **holds at 7.0** A third session without Nightwing in the room. The team briefed Wonder Woman.

4 Edge 6.0

DEBUT · SESSION 16 **The newcomer arrived with a network.** Black Canary volunteered to train him, which brings the Birds of Prey; in his backstory it was *Oracle* who found him online and "*called the Birds*"; and Nightwing, operating as Batman, recruited him and briefed him personally. That is a direct line into the Bat-family and a League-adjacent hero, held by someone who has been on the team for an afternoon. FLAG Which Oracle found him is the open question in §2.6 and 5.12.

5 Intrepid 1.5

ALL-TIME Nightwing, and that is the complete list. The Watchtower stay put him inside the Justice League's headquarters for about a week and he came out with nothing. Since Session 15 he has a social channel with a thousand followers he did not ask for.

SESSION 16 **holds at 1.5** Nothing changed.

5.16 Overall Non-Combat Value / Contribution

1 Quasar-Force 9.3

ALL-TIME Most of what this team accomplishes outside a fight runs through him: engineering, laboratory forensics, the drone network, the evidence chain, the police liaison, data custody across three sites, and a telekinetic domestic multiplier. **Remove him and the Titans stop producing intelligence.** Session 15 was the clearest demonstration yet — three builds, the investigation that tied the juveniles to a STAR Labs executive, the drone net, and the communications with every outside party that could help. Remove him now and the Titans also stop being hidden from the thing hunting one of them.

SESSION 16 **holds at 9.3** The intelligence before the door opened was his.

2 Oracle 8.2

ALL-TIME Value counts what actually gets delivered, and Oracle delivers every day: medicine, the household, awareness, perfect recall, logistics, the Nightwing channel, the STAR Labs relationship and the museum reconnaissance. In Session 15 his deliveries were the most specific forecast of his campaign and the first working explanation of what a teammate is.

SESSION 16 **holds at 8.2** The plan, the forecast that put the team at the right warehouse, and the heals that sent everyone to the bunker on their own feet.

3 Lock-Step 7.0

ALL-TIME The social layer is genuinely load-bearing and invisible on a capability chart: the Marrow Syndicate détente, the Burnout Kings standing down, the party access, the negotiated surrenders, and the weekly stipend he extracted for the whole team. **Without him this team has no diplomacy at all.** Session 15 was the proof at cosmic scale: a species exists because of a conversation he insisted on having.

SESSION 16 **holds at 7.0** The rule of engagement and the offers of surrender were his, and so was the most honest conversation of the afternoon.

4 Edge 4.0

DEBUT · SESSION 16 Before the fight he made the team plan and gave it its target. Outside it, his value is Heightened Senses 2 on paper and a network into the Bat-family and the Birds. Logic −1 caps the rest.

5 Intrepid 1.5

ALL-TIME He patrols and finds things by walking around, which is not nothing. Session 14 added accurate witness testimony and a late, correct question about research, and Session 15 a tail and the library.

SESSION 16 **holds at 1.5** Nothing changed.

5.17 Overall Non-Combat Power / Potency

1 Quasar-Force 9.3

ALL-TIME First place has been his on the strength of breadth at the top end. He leads engineering, lab forensics, cyber, coordination and alliance capital, with high placings almost everywhere else, and is weak only in social, where he is effective in one sincere mode, and in law, where he is a diligent amateur. Session 15 made him first on nine of the fifteen component axes plus both aggregates.

SESSION 16 **holds at 9.3** Still eleven firsts across seventeen: Leadership, Engineering, Cyber, Field Investigation, Lab Forensics, Law, Empathic Support, Coordination, Alliance Capital, and both aggregates.

2 Oracle 7.4

ALL-TIME Medical 9.5, Sensory Awareness 9.0, Domestic Utility 9.0 and Empathic Support 9.0, with Leadership above 8: several non-combat axes at 9.0 or above, which nobody but Quasar-Force matches. He loses the technical axes to the specialists around him and wins breadth on what he owns outright.

SESSION 16 **holds at 7.4** First on Medical, Sensory, Domestic and Teaching. **The breadth that once won him this section still wins him second.**

3 Lock-Step 5.5

ALL-TIME Elite in one dimension and near-absent in every technical one. He has risen because the non-technical dimensions keep turning out to matter: human intelligence, diplomacy, the only mission-vetting proposal anyone has made, and a medical capability nobody knew he had. In Session 15 the one dimension got larger: social engineering at 9.5, alliance capital at 7.2, and the first demonstrated information-operations capability on the team.

SESSION 16 **holds at 5.5** First on Stealth and Social Engineering.

4 Edge 3.8

DEBUT · SESSION 16 No firsts. Second on Sensory, third on Stealth, Social Engineering and Empathic Support, fourth on six more, and last on the five Logic-driven axes where his Logic of −1 breaks a tie with Intrepid's 0. **A combat specialist's non-combat profile, with one first-rank instrument in it.**

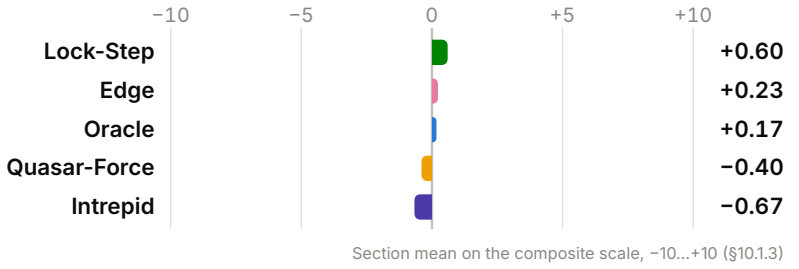

5 Intrepid 1.6

ALL-TIME He patrols and finds things by walking around. At Session 14 he placed last on fifteen of the seventeen non-combat axes, and at Session 15 on all seventeen.

SESSION 16 **holds at 1.6** **Last on twelve of the seventeen.** The other five last places are Edge's, and they are tie-breaks on Logic, not gains.

NOTE *The vacancy, partly filled.* Session 15 recorded that this section had lost its third-best member and that nothing had replaced him. Edge enters fourth on both aggregates, behind Lock-Step, with first-rank capability on Sensory and nowhere else. **The section's third place is still Lock-Step's, and the gap Exemplar II left in the technical middle is still open.**

§6 Capability Robustness & Conditionality

Section mean on the composite scale, −10…+10 (§10.1.3)

How well capability survives contact with adverse conditions: preparation denied, powers suppressed, countermeasures applied, support removed. Session 16 tested three of these axes directly. A power was stolen from a Titan for the first time, three different counters landed on three different members, and the one member who was alone when the enemy found him was removed in a single roll.

6.1 Ability to Leverage Prep-Time

1 Quasar-Force 9.8

ALL-TIME Inventor, Scientific Expertise, Logic 7 and Brilliance 4, plus access to three separate laboratories including an air-gapped underground physics lab. Give him a day and he comes back with drone modifications, a rebuilt security architecture, an evidence package or a decoded artifact. **Prep-time is the condition under which he is most dangerous.** Session 15 was the purest conversion on his file: he named the order of work three times, then built a New God signal mask, an adaptive anti-teleport device and a nanosuit upgrade, in that order, in six days. **Give him a target and a week and he comes back with three builds.**

SESSION 16 **holds at 9.8** The prep window was minutes, and he used it: a drone sweep that found the five searching crates, and a deduction about their powers.

2 Oracle 8.0

ALL-TIME **Precognition 1 is prep-time as a superpower.** Twenty-four hours of lookahead is a planning window nobody else has, and Eidetic Memory means nothing he prepares is ever forgotten. Session 13 turned a prep window into a product, a complete entrance map and staffing assessment on three days' notice. Session 15 converted the lookahead into a plan: an actor, a probability, a collision window and a destination, which Lock-Step summarised as *"working backward from screwed."*

SESSION 16 **holds at 8.0** The forecast put the team at the right warehouse. At the door he had *"No plan. Not on this one,"* and then a teleport ambush.

3 Lock-Step 4.5

ALL-TIME Powerful Hex can be configured in advance, which is real preparation. Temperamentally he improvises and skips the briefing. In Session 14 he argued *for* preparation for the first time, proposing the pre-mission questionnaire, and in Session 15 he did it on Kwa: a scout, an exit, a healer at his elbow and an opening question.

SESSION 16 **holds at 4.5** He named his own role in the preparation — *"I'm just the if it all goes to hell"* — and left the planning to Oracle.

4 Edge 2.5

DEBUT · SESSION 16 Logic −1 and nothing on the sheet that converts time into advantage, except Heightened Senses 2 given time to listen. **He is the member who asked for the plan**, and he came to the door already briefed by Nightwing. Above Intrepid on the instinct.

5 Intrepid 2.0

ALL-TIME Nothing on his sheet converts time into advantage; he is exactly as capable after a week of planning as after ten seconds. In Session 14 his only contribution to a preparation discussion was to ask, afterwards, whether anyone had done any research.

SESSION 16 **holds at 2.0** *"Nothing, I guess."*

6.2 Ability to Function Without Powers

1 Lock-Step 7.5

ALL-TIME Ego 7 and the best social capability on the team are not powers. Depowered, he still talks his way into the nightclub, still gets the location out of the lieutenant, and still runs the room. Session 14 was a full session of him operating almost entirely on personality inside an institution where none of his powers were any use. **Session 15 was the proof at the largest scale available**: the encounter that decided the fate of a species was a conversation.

SESSION 16 **holds at 7.5** Two offers of surrender that nearly worked on a controlled telepath, and the most honest conversation of the afternoon — none of it a power.

2 Quasar-Force 5.5

ALL-TIME Logic 7 and Brilliance 4 survive suppression, and an intact Quasar-Force mind is still the best analyst in Blüdhaven. What does not survive is the body: an 84-pound fourteen-year-old with Melee −2. OOC **For him, "without powers" means without the mother box, not without telekinesis**, and Taleria confirmed in Session 15 that she cannot point to where he ends and the box begins. **For him, "without powers" now means without Stella.**

SESSION 16 **holds at 5.5** Nothing changed.

3 Edge 4.5

DEBUT · SESSION 16 Agility 7 is an ability, not a power, and Black Canary trained him *"all-out."* Depowered, he is a fast fifteen-year-old with real martial training, Ego 4 and Logic −1. **Third on arrival**, behind the two members whose minds are the asset.

4 Oracle 3.5

ALL-TIME The hardest case on the axis. Vigilance 6 and Eidetic Memory persist as faculties, but **his powers are not equipment he carries; they are the body he lives in**, and the cybernetics keep him upright. "Without powers" for Oracle may not describe a survivable state.

SESSION 16 **holds at 3.5** Nothing changed.

5 Intrepid 2.0

ALL-TIME His mutant physiology *is* the character. Remove it and there is a sixteen-year-old with Logic 0, Agility 0, Vigilance 3 and no skills on the sheet.

SESSION 16 **holds at 2.0** Nothing changed.

6.3 Power Independence / Lack of Single Point of Failure

1 Intrepid 8.5

ALL-TIME Innate mutant physiology with no device, no artifact, no patron and no external dependency of any kind. For fifteen sessions this entry said **there is nothing to confiscate, disable or negotiate for**, and that his powers were the one thing about him that could not be taken.

SESSION 16 **9.0 → 8.5 (−0.5)** **Session 16 found something to confiscate.** Blood Blade's Swipe took Sturdy 3 off him on a hit and used it herself for two rounds; he got it back only when a stun broke her concentration. Innate powers have no single point of failure, but they can be taken one at a time by an opponent built to do it. He stays first, because nothing else on the roster is as independent.

2 Edge 8.0

DEBUT · SESSION 16 **The second-most independent kit on the roster.** A Monster origin, so his powers are what he is, and a weapon that is Constructible, so taking it from him buys an enemy very little. No patron, no device, no box. What keeps him behind Intrepid is that his attack powers are weapon powers, and that his origin is a legend nobody, including him, fully understands.

3 Oracle 4.5

ALL-TIME Hardware rather than biology, which is a dependency, but distributed across an integrated system rather than concentrated in one component. STAR Labs is a maintenance dependency, not an on-switch. In Session 15 the module had its first malfunction not caused by an enemy, under temporal transport, and it now resonates with a teammate's time-altering powers. **The hardware has a sensitivity to time phenomena, and one of his teammates has turned out to be a time phenomenon.**

SESSION 16 **holds at 4.5** The module worked all fight. VOLATILE The device the brood came for was keyed to Lock-Step's time manipulation; what it would have done near Oracle's module is unknown.

4 Lock-Step 2.5

ALL-TIME Stacked dependencies. **The Vibranium chain whip supplies half his damage multiplier**, and Protection Hex is a single power carrying his entire defensive profile. Summonable protects the first; nothing protects the second. Healing came out of Powerful Hex too, so **everything that makes him versatile and everything that makes him fragile is the same power.** Session 15 added a third dependency, the power source itself: lantern-derived, linked to Oa and the Grey Lanterns, with a ring that will not charge until he remembers an oath. **An outside order now has a stake in what powers him.**

SESSION 16 **holds at 2.5** A Marrow Syndicate warehouse held a device keyed to his time manipulation. If the device was built to act on his power source, that is a fourth dependency; nobody knows, and it no longer exists.

5 Quasar-Force 1.0

ALL-TIME One object. It cannot be forcibly removed without killing him, and it cannot be replaced. Every power he has flows through a single Apokoliptian-modified mother box with its own damaged personality and survival drive, and Session 14 showed it can reduce output on its own initiative. **Both of his Iconic Items — the circlet and the upgraded nanosuit — carry the same two flaws, *Worn* and *Requires Origin X-Element Mother Box*,** so every capability he added in Session 15 runs through the same object as everything he already had.

SESSION 16 **holds at 1.0** **The single point held against the one attack built to exploit points like it.** Swipe, which stole a power from Intrepid, failed against his fortified mind. That is the hardware working as designed, and it is scored in 4.2 and 6.4. The dependency is unchanged.

6.4 Resilience Against Countermeasures & Neutralization

1 Lock-Step 8.0

ALL-TIME Protection Hex routes every incoming attack and effect through an Ego defence of 20, so there is no soft face. Argent's mind control failed twice, and Dargrave's mind-read failed outright. Powerful Hex means a counter that works one round may not apply the next. In Session 14 not a single enemy action was directed at him successfully across four turns against an Olympian goddess. Session 15 recorded the first way past the Hex (the progenitor, "*with ease*") and closed a hole in the other direction: Elemental Infusion (Force) means phasing no longer makes a target immune to him.

SESSION 16 **holds at 8.0** The Hex did its job — he evaded Argent's telekinetic sphere through it — and a Marvel-20 glitch bomb went through it anyway. One perfect roll is not a countermeasure; it is the dice.

2 Edge 6.2

DEBUT · SESSION 16 **He arrives carrying the answer to the counter that beat the team in Session 14.** Heightened Senses 2 compensates for a lost sense, puts double trouble on anyone sneaking past him, and gives him a double edge to perceive — the capability that saw through invisibility and obscurement when Exemplar II had it. Slow-Motion Dodge strips edges from attacks on his Agility defence, he has damage reduction on both tracks, and his powers are innate. Against it, mental defences of 15 to 16, and nothing in Session 16 tested the senses. VOLATILE Second on paper.

3 Quasar-Force 6.0

ALL-TIME Viral catalogued his mind as unusually resilient after failing to enter it, while Psyche's method worked twice. Session 14 added a cruder and better countermeasure: 60 Health, no healing, and no way to perceive an invisible attacker, so one strike from concealment ends his participation. Session 15 narrowed the telepathic route with the circlet's Uncanny 3 and answered Azimuth's search with the mask. **What remains is physical, and it is the countermeasure that actually worked.** MECHANICAL FLAG The circlet is *Worn*: knock it off and the mental defences drop by three, the mask ends, and a New God can find him again.

SESSION 16 **holds at 6.0** **Both halves, in one fight.** The mental countermeasure failed against him: Swipe could not get through his fortified mind. The physical one worked twice: a Marvel and a reaction strike through his damage reduction, and a glitch bomb that ignores it.

4 Intrepid 6.0

ALL-TIME Resilient by sheer margin: the largest Health pool on the team, the highest physical defences, H-DR 3, Iron Will, Fearless, Enduring Constitution and a healing factor. **There is no clever answer to Intrepid, only a sufficient one** — and the sufficient answers have never been damage. In Session 13 his grab did nothing while Umbra escaped; in Session 14 a force field made his grapple payload irrelevant and an area stun removed him; in Session 15 an alien hive mind took him on a 14-Marvel against his Vigilance of 14.

SESSION 16 **6.5 → 6.0 (−0.5)** **Beaten by something other than damage for the fourth consecutive session.** This time it was a power thief. Swipe took his Sturdy 3 — the damage reduction and the defensive boost that make up much of his margin — and the opponent who took it used it against him. A sufficient answer to Intrepid never needs to be clever; it only needs not to be a punch.

5 Oracle 2.5

ALL-TIME The most completely countered member of the team. His Ego defence of 10 was flagged for five revisions as the softest door on the roster, alongside an unrepaired write channel into his module. Then in Session 14 Ecliptica beat him with two moves that used neither weakness: an elemental grab he owns no power to escape, and **an area obscurement that removed his ranged specialism, his overwatch and his ability to locate anything.** He was held, blinded and drained from 180 Focus to 3 by an opponent who never attacked his body or his Ego. Session 15 added a telepath reading his purpose and a module degraded by temporal displacement.

SESSION 16 **holds at 2.5** **The brood found a third counter.** Dragonborne spent a reaction to turn Oracle's Return Fire onto Lock-Step, so the reaction that punishes attackers hit a teammate instead. The grab-and-drain was not used. FLAG **Two advances banked since Session 14 and undeclared for a third session.** Any mental power that projects strength breaks the grab, and Uncanny raises the soft door.

Tie: Quasar-Force over Intrepid at **6.0**, broken on Session 16 evidence: the same theft that took Intrepid's power failed against Quasar-Force's mind.

6.5 Power Failure Mode Lack-of-Severity

What happens when it goes wrong. High = benign failure.

1 Oracle 7.0

ALL-TIME A missed shot hits a wall, a failed heal costs Focus, and **his powers cannot kill anyone even when they work**, which makes his offensive failure modes structurally benign. Session 14 was the most complete failure he has had, and he absorbed all of the consequences himself. The structural concern dates from Session 12: the module accepts information from outside itself and renders it as its own output. In Session 15 he failed the Logic check on a forecast and still produced a figure the team planned around. **A module whose failures look like results is benign only as long as someone remembers which roll produced them.**

SESSION 16 **holds at 7.0** His one failure of the fight was induced by an enemy: Return Fire, redirected onto Lock-Step for 13 Focus. It was Focus damage, as everything he does is, and Lock-Step stayed up.

2 Intrepid 3.5

ALL-TIME Ground-Shaking Stomp is indiscriminate by design, and he has come within one roll of killing ordinary humans three separate times. The failure mode is manslaughter, mitigated only by the fact that everyone, including him, can see it coming. Melee 7 and a ×7 +7 swing (Session 15) make the failure a point larger.

SESSION 16 **holds at 3.5** The one stomp of the fight hit only an enemy (4.16). The failure mode is unchanged and was not triggered.

3 Edge 3.0

DEBUT · SESSION 16 On the sheet, a marksman's failures are a miss and, on Double Tap's Fantastic, bleeding. **The real question is the power behind the weapon**: it slices through objects by concentration, it arrived with constant headaches and eyes that glow, and the backstory says the monster it belongs to "*cut down armies.*" Black Canary volunteered to train him because the power is dangerous. VOLATILE Nobody has seen it fail. Third on arrival, on what the roster says it could do.

4 Quasar-Force 2.0

ALL-TIME His powers fail loudly. Crush produced more than twice a target's maximum Health and killed a man. Precision failures put a teammate in a toxic cloud. Commandeered by a telepath, his telekinesis brought down the main containment field on a device STAR Labs says could compromise the stability of the universe. **His ceiling — cruise-ship tonnage with no check — means a bad failure is not a casualty but an event.** In Session 15 he raised the box's trauma himself, under a telepath's read, and the box held.

SESSION 16 **holds at 2.0** The crush on Stote was calibrated to a knockout (4.17). No failure.

5 Lock-Step 1.8

ALL-TIME Berserk is a failure mode with no upper bound and no off switch, and it has fired twice. Blind teleportation once dropped him alone into a room with ten monsters. Doctor Fate's entire objection is that his failures scale past the city. Session 15 changed the diagnosis: his powers work by "*unconsciously altering time waves to make things into reality.*" OOC Time powers are on the GM's banned list for a reason. **A chaos mage whose effects are unconscious edits to time is a failure mode nobody at this table has a ceiling for.**

SESSION 16 **holds at 1.8** No Berserk, no blind teleport, and a fifth clean engagement. VOLATILE A device keyed to his time manipulation was in the warehouse, and nobody knows what it would have done with him.

6.6 Solo Operating Capability

1 Lock-Step 7.5

ALL-TIME Self-inserting, self-extracting, nearly unhittable behind Protection Hex, and socially capable of talking his way through anything he cannot teleport past. He already operates alone by preference and skips team activities to do it. Session 14 added a heal he can configure for himself. Session 15 cut against the profile twice without moving the score: his mental armour has been walked through once, and his face now trends.

SESSION 16 **8.0 → 7.5 (−0.5) The solo operator was alone when the enemy found him.** He had struck and teleported clear, and Blitzkrieg teleported out after him and took him from 60 to −24 in one roll. Nobody was there to keep him up; Oracle's Let's Go reached him only at the end. His Round 2 complaint — *"This is what happens when I stay with the team. I should have vanished"* — got its answer two rounds later: the hit that dropped him came when he had vanished.

2 Edge 6.5

DEBUT · SESSION 16 **The best solo profile on arrival after Lock-Step's.** He heals himself, his powers are innate and his weapon is constructible, he dodges, and Heightened Senses 2 means he will find the fight and know who is lying to him in it. In Session 16 he did the one solo job the fight produced: he held off Blitzkrieg alone for a round. Against it, Logic −1, 90 Health and no movement power.

3 Intrepid 6.0

ALL-TIME A huge Health pool and fast regeneration make him extremely hard to kill alone. Logic 0, Vigilance 3 and no investigative capability mean he would never find anyone to fight. In Session 15 he did his first solo task, tailing a limousine across the city. He still needs somebody else to find the fight.

SESSION 16 **holds at 6.0** He stayed alone in the fight by choice and went down twice in it.

4 Oracle 5.0

ALL-TIME Self-healing, precognitive and perceptive, with no mobility power at all and 90 Health. Session 13 established that, sent out alone, he comes back with a complete reconnaissance product. What he cannot do alone is get anywhere or escape anything; in Session 14, pinned in place, there was nothing in his own kit to call.

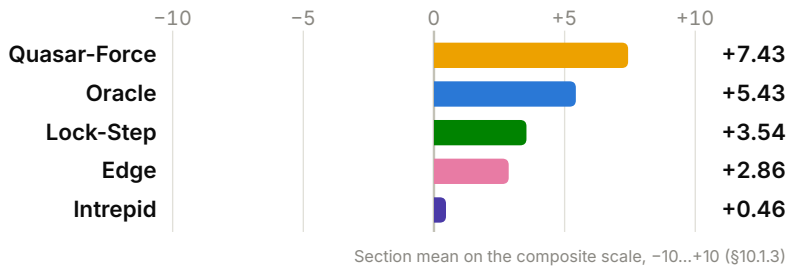

SESSION 16 **holds at 5.0** His healing factor got him up from −2 on his own. Getting him out of the building took Lock-Step.

5 Quasar-Force 4.5

ALL-TIME Brilliant, mobile and made of paper: 60 Health, no healing of any kind, and recent sessions ending at 1, 4, −11 and −12 Health. Session 14 executed this axis's thesis in one round: he acted alone once, and the fight ended for him. **He is the most capable person on this team and the least able to operate without it.** In Session 15 the circlet removed most of the second floor, since Azimuth now has to find him without a signal.

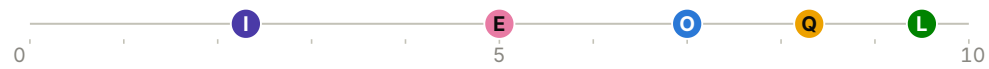

SESSION 16 **holds at 4.5** **The thesis again.** At −5 in the opening exchange he stayed in the fight only because Oracle's Let's Go held him up, and from −30 he stayed on the board only within Oracle's range.

§7 Overall Power / Ability / Value

Section mean on the composite scale, −10…+10 (§10.1.3)

7.1 Versatility & Adaptability

1 Lock-Step 9.5

ALL-TIME Powerful Hex means his power list is *any power he has the rank for, prerequisites ignored.* In play it has produced Quick Phase, Teleport Blind, Teleport Together, Disrupt Person, Real Jinx, a sleep effect and, in Session 14, healing hands. **Nobody else on this team can change what they are mid-combat**, and in Session 14 he changed what he was *after* combat, into the one role the team had no backup for. Session 15 added four roles that use no power at all — first-contact diplomat, host, recruiter of outside help and broadcaster — and a fifth nobody at the table understands yet: a Grey Lantern in training.

SESSION 16 **holds at 9.5** At the ceiling this scale allows him. In one fight he was the negotiator, the striker who finished the first target, the rescuer, and the team's transport out.

2 Quasar-Force 8.3

ALL-TIME One power set applied to everything: attack, defence, restraint, barriers, flight and heavy lifting; disarming, handcuffing, moving vehicles, pulling bodies out of gas, escaping webbing with telekinesis as raw strength, and playing an unfamiliar NBA game. **His versatility comes from imagination, not options, which means it scales with the player rather than the sheet.** Session 15 extended the list away from telekinesis entirely: fabricator of New God–grade hardware, research collaborator on his own biology, surveillance operator, vehicle-registration investigator, and the team's switchboard to the League and the Corps.

SESSION 16 **holds at 8.3** Reconnaissance, analysis, a grab through a force field, a pin and a crush, all inside four turns.

3 Oracle 7.0

ALL-TIME Five distinct battlefield jobs — ranged attacker, healer, reviver, morale restorer, and scout and overwatch — plus field reconnaissance without any relevant trait. Session 14 was the counter-case: pinned and blinded, most of those jobs became unavailable at once, because they share a single dependency on line of sight and the ability to stand somewhere. Session 15 added two roles off the field: a live network interface, and the designated tutor for a teammate's unlockable powers.

SESSION 16 **holds at 7.0** **All five jobs in one fight**, including the one he does least: he took the planner's chair when it was pointed at him.

4 Edge 5.0

DEBUT · SESSION 16 A specialist with more range than the word suggests: two damage tracks (Health through Stopping Power and Double Tap, Focus through Suppressive Fire), a called shot that disarmed a phaser, a rear guard, and a sensory role nobody else on the team can fill. He has not yet been shown doing a second job off the battlefield.

5 Intrepid 2.3

ALL-TIME One job, done superbly. Session 14 was the first session in which the job itself came apart into pieces that failed separately. Session 15 gave him the first second job of his file: on Day 56 he tailed a vehicle across the city by air, competently.

SESSION 16 **holds at 2.3** The one job, again.

7.2 Power Mastery / Control

1 Quasar-Force 9.5

ALL-TIME Explicitly noted as very gifted at gaining precision and control, and the play backs it. He flies constantly for the pleasure of it, disarms individually, cuffs a sleeping man without waking him, guides a teammate's fist into a target, and dodges with telekinetically assisted agility. **The fly-by-wire framing means his ceiling is bounded by what he thinks to try.** In Session 15 Taleria told him "*Your powers are her communication to you*" and prescribed the training regime, and he designed the first experiment: a suspended marker, "*like ouija board stuff.*"

SESSION 16 **holds at 9.5** **A grab through a force field, and a crush sized to a knockout.** He took Argent through the field she raised against him and held her against her own telekinetic strength, and he crushed Stote — a person he had crushed before — unconscious rather than dead.

2 Oracle 7.8

ALL-TIME He uses his module correctly every time. He holds actions, reassesses targets on precognitive input, and in Session 13 used the module as a counter-stealth instrument nobody had thought of. Session 14 showed high reliability meeting a hard limit, and Session 15 two more limits — the module faltering under temporal transport, and a forecast from a failed Logic check that he reported honestly ("*I don't think I necessarily got to the death part*"). **Knowing exactly what your instrument did and did not tell you is mastery.**

SESSION 16 **holds at 7.8** Charmed Life turned his opening Marvel into a super-Marvel on the right target, and the module steered a teammate's stomp onto the right enemy.

3 Edge 6.5

DEBUT · SESSION 16 **Mastery of the weapon is on record; mastery of the power is not.** He made a called shot at a hand-held device, with trouble for the disarm, on a phaser at the wall, and hit. He chose Suppressive Fire three times when Stopping Power would have done more Health damage, which is a throttle used on purpose. Against it, the power behind the weapon arrived with constant headaches and is dangerous enough that Black Canary volunteered to train him. VOLATILE Third on arrival.

4 Intrepid 4.0

ALL-TIME Improving visibly — he takes positioning guidance before stomping rather than swinging blind — and his own stated fear is that he cannot control it. The evidence supports him. In Session 14 he correctly declined to punch through a floor, and then committed a full action to a restraint that had already failed once against the same class of defence.

SESSION 16 **holds at 4.0** The improvement showed once: the stomp went where Oracle's module pointed it, and hit only an enemy (4.16). One use is not mastery.

5 Lock-Step 3.5

ALL-TIME Chaos magic he has not mastered: two Berserk episodes he could not control, a botched blind teleport, and a hex system whose power comes from its unpredictability. It has been improving. In Session 14 he produced a configuration he had never used, on demand, **dosed deliberately to the minimum that would work** — the first time he chose the size of an effect. Zatanna's position is that he can be *trained*, which concedes that he currently isn't. Session 15 was the session in which he found out he does not know what his powers are: lantern-derived, time-altering and *unconscious*. "*So I'm like a grey lantern, but like in training.*"

SESSION 16 **holds at 3.5** His most precise teleport yet — Oracle placed inside Argent's sphere — and no Berserk. The question Session 15 opened, what his powers actually are, did not come up.

7.3 Growth Trajectory / Remaining Headroom

NOTE ON THE GREY LANTERN'S PERCEPTIONS. *On arrival in Session 15 the time-travelling Grey Lantern identified the four of them as Justice League members: Intrepid as Superman, Lock-Step as Green Lantern, Quasar-Force as Captain Atom, Oracle as Batman. Within the hour one had been literally confirmed — Lock-Step is a lantern — and a mind-reading alien told Intrepid he is "remembered as Intrepid, but… called Superman." This document treats all four as* VOLATILE *GM foreshadowing: not evidence of capability, but not nothing either. Session 16 added nothing on either side. It did add a fifth item of the same kind: Edge's legend, an ancient monster reborn, with a title on the roster to match — "The Reborn Calamity."*

1 Quasar-Force 9.7

ALL-TIME The steepest curve on the team and the most consequential. The mechanical half is a published Rank 3→6 plan that ends in spacetime manipulation, the longest runway on the roster. The unmechanical half is the mother box, and Session 15 moved it further than any session before: "*When you learn, she learns*," which is the roster's planned *Awakening* beginning on screen; Azimuth's view that he is "*beginning to access the source in a way he only imagined*"; and the Grey Lantern's "*no longer merely human.*" RULING Rank 3.5 went to two Iconic Items, the house rule now closes Telekinetic Protection, and Energy Absorption is the remaining Rank-4 survivability purchase.

SESSION 16 **holds at 9.7** No movement on either half. The brood's account of why it ganged up on him is an argument for Energy Absorption (§4.1 roadmap note).

2 Lock-Step 9.5

ALL-TIME **Powerful Hex scales with rank as a blank cheque**: any power he has the rank for, prerequisites ignored, so every rank multiplies his options. Three of the most significant magical figures on Earth are competing over who trains him. Session 15 added the most headroom on the board, all of it plot rather than sheet: a Grey Lantern succession ("*When my time has passed, my ring will go to you*"), a secondary ring already on his finger that will charge once he remembers the oath, and a diagnosis — lantern-derived, linked to Oa, "*unconsciously altering time waves*." RULING **Time Powers are on the GM's banned list**, so whatever the ring does will arrive as GM-granted plot rather than purchasable powers.

SESSION 16 **holds at 9.5** The ring was not mentioned. VOLATILE A crime syndicate was trafficking something keyed to his time manipulation, which says somebody outside the team believes his powers can be acted on.

3 Edge 8.0

DEBUT · SESSION 16 **The newest member has the third-longest runway.** His Rank 3.5 advances are all taken (Accuracy 4, Agility 7, Suppressive Fire, Heightened Senses 1 and 2), he has Quick Learner, and a League-adjacent hero is training him. The roster calls him a "*Spatial Infiltrator*" and his weapon "*spatial-severing*," and nothing on the sheet yet delivers either. Behind all of it is the legend: a reborn ancient weapon whose true name is lost. VOLATILE If the legend is literal, this is the axis it moves most. MECHANICAL FLAG If the Cutting Edge's +1 has not been applied, there is a point of damage multiplier already on the sheet waiting to be counted.

4 Oracle 7.5

ALL-TIME STAR Labs hardware can be revised, and Precognition has obvious room to extend in range and reliability: growth by upgrade rather than by unfolding. Session 14 added a second path, when his module became a required component in a League-supervised build. Session 15 added a third: a module that resonates with lantern-derived time phenomena and has already produced the assist channel to Lock-Step. VOLATILE A time traveller looked at him and saw Batman. **§6.4 names the single highest-value purchase available to him**: any ego- or logic-based power that projects strength, which under the house rule would let him escape a grab.

SESSION 16 **holds at 7.5** FLAG **Two Rank 3.5 advances are undeclared for a third session.** If either bought the escape power, this document is understating him in four places.

5 Intrepid 6.0

ALL-TIME On the sheet he is linear: bigger numbers on the same four things, and two sessions of Crushing Grip failing against defences that scale show that the linear path has a ceiling. **Off the sheet, Session 15 was the first session to suggest a discontinuity**: a traveller from Kwa's future called him Superman, a telepath said he is "*called Superman*," and the scenario opened with kryptonite "*headed for you, Superman.*" He answered with the first ambition on his file: "*I don't even think I'm as strong as Superman. Not yet anyway.*" **If the GM is foreshadowing, this is the most important line in his file. If not, it is a joke, and this entry falls back to 4.5.**

SESSION 16 **holds at 6.0** Nobody called him Superman. He did what the comparison implies — stood in front of everything and refused to leave — and lost a power to a thief, which is not in the Superman brief.

7.4 Justice League Readiness — Capability

Capability only. Character is 1.14.

1 Quasar-Force 9.0

ALL-TIME Asked who the smartest person in the Justice League was, Wonder Woman pointed at him. Nightwing, operating as Batman, told him that he and Oracle are equal to or better than anyone the League could send. In Session 14 a founding member moved him into the League's headquarters, and in Session 15 he did League-grade work inside it: three pieces of hardware built alongside the League's specialist in six days, one of which defeated a known villain team's transport in play. **He is the only member whose capability would be League-relevant today rather than in five years.**

SESSION 16 **holds at 9.0** The hardware held against Swipe. A League evaluator would also note the brood's stated reason for opening on him.

2 Oracle 7.5

ALL-TIME Precognition and healing are precisely the two capabilities a large distributed organisation values most and fields least, and Nightwing named him alongside Quasar-Force as League-grade. Session 14 is what a vetting officer would find in the combat log: grabbed by a mental effect he cannot resist, blinded by an area obscurement, drained from 180 Focus to 3, and unable to treat the casualty afterwards. **A support specialist with no mobility, no escape and no Focus damage reduction can be switched off by a competent opponent**, and an evaluator would write exactly that sentence. Session 15's forecast was League-quality staff work.

SESSION 16 **holds at 7.5** Session 16 is the other page of the same file: knocked down, back up, and the fight carried on his healing and his debuffs. The evaluator's sentence still stands, because nothing on his sheet has answered it.

3 Lock-Step 7.4

ALL-TIME Strategic teleportation is a League-scale logistical asset and Powerful Hex is a League-scale wildcard. Session 13 demonstrated both, chaining a boom tube to a drone-guided teleport to close a universe-scale incident, and Session 14 produced emergency field healing from a non-medic. Session 15 was the Kwa encounter: a Lantern called for the Justice League, the Titans answered in its place, and what the scenario required — first contact with a non-human intelligence ending without a fight — is the capability the League most prizes and fields least.

SESSION 16 **holds at 7.4** A clean, disciplined fight and an extraction under fire. *Closest call:* Oracle over Lock-Step by 0.1. On capability alone, the member with Doctor Fate's hostility on file is within a tenth of the member everybody would forward.

4 Edge 7.0

DEBUT · SESSION 16 **A League-shaped specialist.** The League has long carried a marksman, and his mentor knows what one looks like. Best ranged attack on the team, the only Heightened Senses, a healing factor and a dodge, recruited personally by the acting Batman. What an evaluator would want is a second fight and an answer about the power behind the weapon.

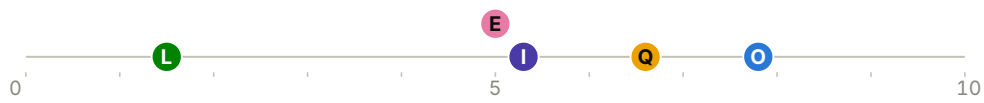

5 Intrepid 6.0

ALL-TIME Genuine top-tier durability and area damage at his rank, and Session 12 remains the best case he has made for himself. **The League has several of him, and none of them is the reason it works.** Session 14 suggested his ceiling is lower than his numbers, since the two effects that removed him from that fight are things League-tier opponents have as a matter of course. Session 15 added 210 Health and the team's only area damage.

SESSION 16 **holds at 6.0** Session 16 is the Session 14 finding again: the effect that hurt him most was not damage.

7.5 Justice League Readiness — Overall

Character (1.14) and capability (7.4) combined, plus the situational blockers that belong to neither.

1 Oracle 7.8

ALL-TIME First on character by a wide margin and second on capability, with no blocker attached. **He is the only member who could be put forward today without a conversation about caveats first**, and Session 14 added the best single line in his file: he reported his own defeat to the sponsoring Justice Leaguer, unprompted, on the night. What holds him below 8 is the capability finding: an evaluator has a specific, repeatable method for neutralising him.

SESSION 16 **holds at 7.8** NOTE The silence recorded in §1.12 is still the one line a sponsor would want explained. Session 16 added two more references to the Destined errand in his hearing, and no comment from him.

2 Quasar-Force 6.6

ALL-TIME He leads capability outright, sits second on character, has been personally endorsed by the acting Batman, and is nonetheless years away. **The blockers are situational rather than personal:** he is fourteen, an open fatality investigation is unresolved, and OOC an Apokoliptian-modified New Genesis artifact is bonded to his brain and has been commandeered by a telepath before. Session 15 eased the worst blocker — the mask went on and he went home — and added a character-side sentence about Fade-Out's "*full lethal fury*" that a panel would ask about.

SESSION 16 **holds at 6.6** Nothing moved.

3 Intrepid 5.3

ALL-TIME A clean record and top-tier durability and area damage for his rank. **Unready rather than unsuitable, and the gap is experience.** In Session 14 he argued, in front of the sponsoring Justice Leaguer, that more information would not have helped. In Session 15 he gave the answer an evaluator wants from a candidate this strong: "*Not yet anyway.*"

SESSION 16 **holds at 5.3** Refusing to leave a fight is the kind of thing a panel admires and a field commander has to manage.

4 Edge 5.0

DEBUT · SESSION 16 A clean first session, a League-adjacent mentor willing to vouch for him, and capability in a role the League understands. The blockers are his age, an afternoon of record, and the question any panel would ask first: what, exactly, the legend says he is. He enters above Lock-Step and below Intrepid.

5 Lock-Step 1.5

ALL-TIME Real League-scale assets underneath a character file that would not reach a vote. **Doctor Fate has publicly declared him a danger to the world**, and the League would hear that before it heard anything else. Session 15 put his best capability evidence and his worst conduct evidence in the same file: capability rose nine tenths, and character fell a full point, because a panel will not get past a solicited killing through a villain team. **What is new is that a cosmic order has vouched for him** — an order the League has never heard of ("*What is a gray lantern?*").

SESSION 16 **holds at 1.5** His best combat conduct to date, and a minor left cuffed in a crime syndicate's warehouse. The panel's first question is still the Session 15 one.

7.6 Overall Value / Contribution

The whole question, combat and non-combat together: what does the team lose if this person walks away tomorrow?

1 Oracle 9.1

ALL-TIME First in combat contribution, second in non-combat contribution, first in standing and first in the pecking order, and the moral spine of a group that badly needs one. He is the only healer, the only dedicated buffer, the household and the medic, and the one member who has shown he will do the right thing when a teammate with more social pull asks him not to. Session 14 showed the team a partial version of his absence while he was in the room: nobody got healed, and a chaos mage had to improvise the replacement hours later.

SESSION 16 **9.0 → 9.1 (+0.1) Session 16 showed the team the whole version of his presence.** Every recovery of the fight went through him; the debuff that sent Dragonborne running was his; the plan was his. Without him, Lock-Step does not get back up to carry the others out of that warehouse.

2 Quasar-Force 8.9

ALL-TIME Almost exactly as valuable, by a completely different route: the analytical engine, the intelligence apparatus, the best control and mobility in the party, joint-highest base damage, and the widest institutional reach on the roster. **The gap to Oracle has always been the healing monopoly**, plus the fact that one strike can remove him from a fight. If he walks, the tower's shield has no maintainer, the drones lose their builder, the League and the police lose their contact, and the device that hides one member of the team from a New God walks out on that member's head. OOC The value is also entangled: the team's best asset is the reason a New God knows their address.

SESSION 16 **holds at 8.9** The intelligence was his, and so was the grab that set up the first knockout. Then he spent half the fight below zero.

3 Lock-Step 8.3

ALL-TIME Monopolies of his own: he is the only person on this team who can move it strategically, and the only person who is good with people. Since Session 14 he has also been the only member other than Oracle to restore another person's Health. Session 15 added the chair and the largest single outcome of the campaign. **Against:** he takes his liabilities with him — the Destined's favour, the streams and the posts — and some of what he generated may cost more than it returns. §3.5 prices that.

SESSION 16 **8.1 → 8.3 (+0.2) The way out.** He finished the first target, carried the healer out of the fight, and brought all four teammates home on the last of his Focus. If he had walked before Session 16, the other four would still be in the warehouse.

4 Edge 7.0

DEBUT · SESSION 16 What the team would lose if he walked: the best ranged shot on the roster, the only Heightened Senses, the shot that denied the brood its objective, and the rear guard that let the extraction start. **Fourth on arrival, ahead of the team's tank.**

5 Intrepid 6.7

ALL-TIME The team's tank: the member who absorbs the damage that would kill anyone else and ends fights outright. His contribution is concentrated in one band, and the band is the front line. With Exemplar II gone he is the only real tank, the only area damage and the cheapest member to field. **What the team loses if he walks is the thing that stands between more fragile people and whatever hits them first.**

SESSION 16 **holds at 6.7** He was exactly that, for 290 damage.

Volatile: Oracle over Quasar-Force by 0.2, up from 0.1. Last revision said: "*One more session in which the healing monopoly does not matter and the engineering does, and this axis flips.*" **Session 16 was the reverse — the healing decided the fight and the engineering was a drone sweep — and the margin doubled.**

7.7 Overall Power / Potency

1 Quasar-Force 9.0

ALL-TIME The highest ceiling on the team. He is first in engineering, lab forensics, cyber, coordination and alliance capital, and first in crowd control, grappling, personal mobility, objective creation and combat synergy, with the steepest growth curve on the roster. **What holds the power ranking below the ceiling has always been the floor**: 60 Health, no healing, and a one-strike removal on record. Session 15 was the first session in which the floor rose (§4.1, §4.2, §6.4).

SESSION 16 **holds at 9.0** Still first on nine non-combat component axes and five combat ones. The floor that rose in Session 15 was tested in Session 16 and held only on the mental side.

2 Lock-Step 7.7

ALL-TIME The highest versatility on the team by a distance, and first on social, team mobility, de-escalation, rescue, stealth and solo operation, with second place on Healing since Session 14. He is held below first by a Focus pool tied for the shallowest, the weakest power mastery on the team, and a non-combat profile that is empty outside the social column. Session 15 added a whip that reaches phasing targets, the second-best growth trajectory in the document, and a ring.

SESSION 16 **holds at 7.7** Nothing on the sheet moved. One of the best fights of his file sits beside the worst single hit he has taken.

3 Oracle 7.3

ALL-TIME First on seven combat axes and on medicine, sensory awareness, domestic utility and teaching. **This axis has never measured his value** (7.6 does); it measures his power, and his power is narrow in the places a head-to-head comparison counts.

SESSION 16 **holds at 7.3** The head-to-head with Lock-Step now reads: he wins Healing by 7.0, Medical by 6.0 and Ally Buff by 5.2, and loses Social by 6.0, De-escalation by 1.7, Team Mobility by 5.8 and Countermeasure Resilience by 5.5.

4 Edge 6.5

DEBUT · SESSION 16 Second on combat potency (7.9), fourth on non-combat potency (3.8), and third on growth. **A sharp specialist with a long runway**, entering ahead of Intrepid on the strength of his senses, his social score and his headroom.

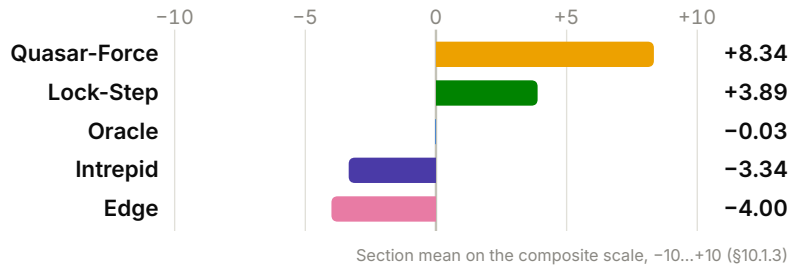

5 Intrepid 6.3

ALL-TIME Dominant in a narrow band, and genuinely dominant there: first on physical durability, stamina, single-target damage, area damage, power independence and overall combat power. **He stays last here without losing anything**, because a combined power ranking also counts the seventeen non-combat axes, on which he places at or near the bottom every time.

SESSION 16 **holds at 6.3** He now places last on twelve of the seventeen non-combat axes rather than all seventeen, and he is last here by two tenths, behind a member with less than half his Health.

The inversion between 7.6 and 7.7 holds. Oracle is first on value and third on power; Quasar-Force is second on value by two tenths and first on power by 1.3. Edge is fourth on both, and Intrepid last on both.

§8 Fame (Exposure)

Section mean on the composite scale, −10…+10 (§10.1.3)

Exposure only — how widely known, independent of whether the opinion is good. Opinion is Section 9.

NOTE *Session 15 moved every member on every public-facing axis, and one teammate, Lock-Step, was responsible for nearly all of it: a viral stream of the Watchtower, a week of follow-up broadcasts, a channel seeded for every member, and a broadcast surveillance operation.* ***Session 16 published nothing.*** *No stream is recorded, and the fight happened inside a warehouse. What Session 16 added is the price. In the fight, the brood said it had ganged up on Quasar-Force first because of his fame, his known fragility and his preference for grappling. For fifteen sessions this section measured exposure as a background risk; Session 16 is the first time an enemy said out loud that it was using it. Only the supervillain axis moved.*

8.1 Fame — Public

1 Quasar-Force 9.3

ALL-TIME The most photographed member of the team by a wide margin. He hovered upside down outside the bank entrance for an entire robbery in a cosmic-mural nanosuit and was the primary media-footage subject. He flew a 120-foot yacht five hundred feet into the air over a party of teenagers. He killed a man in an incident that generated protests, a threatened lawsuit and a televised expert theorising about his mental state. He is publicly identified, looks eleven, and flies everywhere. In Session 15 he was the centrepiece of the stream that went viral ("*It's all because of this guy*") and of a week of workbench footage after it.

SESSION 16 **holds at 9.3** Nothing was published. Lock-Step's description of him to the newcomer — "*that kid that looks like he is like 12*" — is the public image in one line.

2 Lock-Step 8.5

ALL-TIME Word-of-mouth famous, and deliberately so. He posts with hashtags, declared an Instagram Day, teleported hostages out of a bank in front of dozens of witnesses and news cameras, and is embedded in Blüdhaven's teenage social scene, the fastest-propagating network in the city. Since Session 15 he is a trending broadcaster with a co-producer, a house drone, a channel of his own and a signature sign-off ("*Lock-Step out*").

SESSION 16 **holds at 8.5** No broadcast is recorded.

3 Oracle 4.0

ALL-TIME Minimal public visibility during the bank robbery, and nothing on file raised it before Session 15. Extreme Appearance means anyone who *does* see him remembers exactly what they saw. In Session 15 he appeared on the stream ("*Hey, say hi, Oracle!*"), was talked over, and got a channel.

SESSION 16 **holds at 4.0** Nothing changed.

4 Intrepid 3.5

ALL-TIME A Secret Identity, minimal logged visibility, and fights mostly indoors and in alleys. Until Session 15 he was nearly invisible to the public; the viral stream then introduced him with its most shareable line — "*this guy is going to be Superman. Maybe the next Superman*" — and he has a channel.

SESSION 16 **holds at 3.5** Nothing changed.

5 Edge 2.0

DEBUT · SESSION 16 A public identity that his own entry calls "*not very well known*," white hair and eyes that glow, and no logged public appearance. FLAG The roster's condensed entry lists his identity as "???"; the full entry says Public. Scored on the full entry.

8.2 Fame — Media

1 Quasar-Force 9.6

ALL-TIME The primary media-footage subject of the bank robbery; the yacht flight photographed against the moon; and a fatality that generated protests, a threatened lawsuit and a named science advocate theorising about his mental state on television. **He is the most covered member of this team by a wide margin, and the coverage has been accelerating.** A week of Watchtower lab footage in Session 15 added a new genre: the boy genius in space.

SESSION 16 **holds at 9.6** Nothing was published.

2 Lock-Step 9.0

ALL-TIME Media-native by deliberate choice: hashtags, an Instagram Day, a bank rescue in front of news cameras, and quotable lines on purpose. In Session 15 he stopped being only a source for the media; for a week he *was* the media — a trending stream, a follow-up series, an audience-manipulation campaign with a co-producer, and a segment from a surveillance post.

SESSION 16 **holds at 9.0** Nothing was published. VOLATILE The five teenagers he captioned in Session 15 were the five he fought, and the one he cuffed was left in a mob warehouse. If the second story ever meets the first, it will be his.

3 Oracle 4.2

ALL-TIME Minimal footage, though Extreme Appearance guarantees that anything captured is memorable and identifiable. Session 15 put him on a public broadcast for the first time, in a context he did not choose.

SESSION 16 **holds at 4.2** Nothing changed.

4 Intrepid 3.8

ALL-TIME A Secret Identity, and he fights mostly where cameras aren't. Since Session 15, "*the next Superman*" is a headline somebody else has already written.

SESSION 16 **holds at 3.8** Nothing changed.

5 Edge 2.0

DEBUT · SESSION 16 No media record on file.

8.3 Fame — Law Enforcement (Police, Criminal Justice System)

The full criminal-justice apparatus at every level — police, detectives, prosecutors, criminal courts, corrections, and federal enforcement bodies. Corporations, research institutions, civil courts, schools, and city government are 8.4.

1 Quasar-Force 9.5

ALL-TIME **On more criminal-justice records than the rest of the team combined.** Blüdhaven PD knows him by name from repeated visits, a voluntary statement on the record, evidence handoffs, and the noise-complaint arrangement he set up himself. Detectives hold him as a cooperating witness across the Lex-Corp case. **A criminal court holds an open death investigation with his name on it.** And ARGUS, which operates Belle Reve, knows him because Amanda Waller tasked him personally.

SESSION 16 **holds at 9.5** Nothing added or removed.

2 Lock-Step 4.6

ALL-TIME Until Session 15 he had no public identity and no legal name on file, against habitual breaking and entering and an accumulating truancy record: **known to this apparatus as a pattern rather than as a person.** Session 15 gave the pattern a name — "*Eric Williams*," held by an outside party — and a publication record: the faces of five juvenile offenders on release, broadcast with commentary implying reoffence. Juvenile justice and probation do not need anyone to report that. It is public.

SESSION 16 **holds at 4.6** Nothing reached the apparatus in the log. The cuffed teenager in the warehouse will, the moment anyone finds her.

3 Oracle 4.5

ALL-TIME Present at the same incidents and rarely the one talking to officers. Restrained suspects and no bodies is a good outcome and a quiet one.

SESSION 16 **holds at 4.5** Nothing changed.

4 Intrepid 2.5

ALL-TIME A Secret Identity and no logged contact of any kind. Institutionally close to invisible, which is precisely the point.

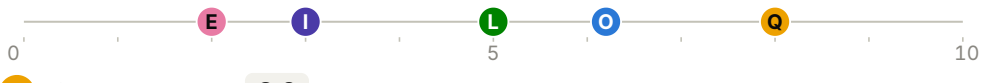

SESSION 16 **holds at 2.5** Nothing changed.

5 Edge 1.5

DEBUT · SESSION 16 No record. His backstory begins with an assault near him that ended with the attacker's weapon sliced to pieces; whether that incident reached a police report is not on file.

8.4 Fame — Other Non-Superheroic Institutions

Everything institutional ***outside*** *the criminal-justice system: corporations, research bodies, civil courts, licensing and revenue systems, schools, and city government.*

1 Quasar-Force 8.0

ALL-TIME Lex-Corp's legal department has him identified by name and has issued a cease-and-desist. STAR Labs knows him through his father and directly: it has lent him suppression cuffs twice, its Blüdhaven CFO has taken a meeting with him, and Doctor Varga of the Celestial Research Division wants him in a laboratory. In Session 15 he traced one of their vehicles to their CFO and parked a stealth drone in their warded garage; organisations that ward their garages check them. **The footprint is corporate and scientific rather than judicial, and it is broader than anyone else's.**

SESSION 16 **holds at 8.0** Nothing changed.

2 Oracle 6.2

ALL-TIME STAR Labs built his body, which makes him a permanent case file at a major research institution. School adds a district record, and a museum's staff knows the cyborg who mapped their entrances.

SESSION 16 **holds at 6.2** Nothing changed.

3 Lock-Step 5.0

ALL-TIME No employer, no registrations, no assets and no filings — and a truancy record, which is exactly the institutional exposure he would least want. Iron-Side's stipend implies a payer and a payment record. Session 15 added platform presence (a trending account and administrative control of four others) and a STAR Labs employee's face and vehicle on his public stream, and Iron-Side's school now has a record of him sleeping through four days of make-up classes.

SESSION 16 **holds at 5.0** Nothing changed.

4 Intrepid 3.0

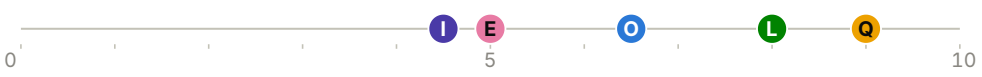

ALL-TIME A school district record and a Secret Identity, plus, since Session 15, a social-media account he did not set up. Institutionally close to invisible.

SESSION 16 **holds at 3.0** Nothing changed.

5 Edge 2.0

DEBUT · SESSION 16 A school record with grades that were "*already bad*" before the powers arrived, and School as an Obligation on his sheet. Nothing else institutional on file.

8.5 Fame — Superhero Community

1 Quasar-Force 9.0

ALL-TIME Nightwing has observed, scanned and monitored him since before he joined the team, and rates him at or above the available Justice League bench. OOC Bruce Wayne holds the dormant mother-box shell. Wonder Woman has met him several times, and Guy Gardner gave him a private audience and an open information channel. Session 14 added a founding member who decided he needed protecting and a League researcher who knew who he was before she walked into the room. Session 15 added a week of daily collaboration aboard the Watchtower, and a Grey Lantern who summarised him as "*no longer merely human.*"

SESSION 16 **holds at 9.0** Nothing changed.

2 Lock-Step 8.0

ALL-TIME Three of the most significant magical figures on Earth have opinions about him, and in Session 14 he became memorable to the Justice League in the way nobody wants to be, wrapped in the Lasso of Truth. **Everyone in this community who has met him remembers which one he was.** Session 15 added the strangest fame in the document: a Grey Lantern succession, a Kwa progenitor seeking out "*the Gray Lantern of Earth*" by name, the Watchtower's staff in the background of his stream, and Guy Gardner yelling "*Put some more money into your account!*" across a live fight.

SESSION 16 **holds at 8.0** Nothing changed.

3 Oracle 6.5

ALL-TIME Mentor (Nightwing), a body built by STAR Labs, and the member who answers when somebody senior asks how the team is doing. In Session 14 he called Wonder Woman to report the loss, which is the interaction a senior hero remembers, and a League researcher called his hardware "*fascinating*" — a different kind of fame, and it generates paperwork. VOLATILE In Session 15 a time traveller saw Batman in him.

SESSION 16 **holds at 6.5** Nothing changed.

4 Edge 5.0

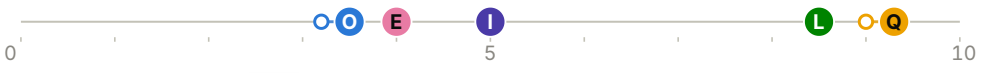

DEBUT · SESSION 16 **Known to the right people before he was known to the team.** Black Canary volunteered to train him, and the Birds of Prey were the ones called when he went looking for help. Nightwing, operating as Batman, recruited him and briefed him personally. Two senior heroes and a network know his name; nobody else in the community does yet.

5 Intrepid 4.5

ALL-TIME Mentor (Nightwing) was very nearly the complete list; a week inside the Justice League's headquarters left nobody writing his name down. In Session 15 a viral stream shot inside the Watchtower called him the next Superman, after a Grey Lantern and a hive mind had already called him Superman. **He has never done anything this community would talk about, and it now has something to talk about.**

SESSION 16 **holds at 4.5** Nothing changed.

8.6 Fame — Supervillain Community

1 Quasar-Force 9.3

ALL-TIME Both recognised on sight and specifically discussed. Insidious gangers shout "Titans!" on spotting him, and every captured villain has met him because he conducts the interrogations. The Destined once stole his drone codes, Viral catalogued his mind, Hexcaliber targeted him specifically, and Aegis-Girl walked past Exemplar to attack him personally. Session 14 added a tactical fact four thieves and a goddess can now sell: the flying kid goes from full to unconscious in one strike. Session 15 added a notice every teleporting villain will learn the hard way — the tower's shield is his.

SESSION 16 **9.0 → 9.3 (+0.3) The underworld has a written answer to him, and it said so.** The brood explained its opening in its own banter: his fame, his known fragility, and his preference for grappling, which it called the most damaging thing to its tactics. Blitzkrieg followed him behind his container — "*What's ya doing, Hiding?*" — and dropped him. **What the community knows about him is now a doctrine, not a rumour.**

2 Lock-Step 8.5

ALL-TIME Shadow-Boxer tried to recruit him, and so did the Red Aegis boss. The Destined negotiate with him as the team's voice, the Marrow Syndicate has him on file, and someone spent a bespoke temporal artifact building a profile of him. **The underworld has always known his name.** In Session 15 the Destined came to work *for* him, Fade-Out congratulated him on his leadership, and he publicly mocked five teenagers who are now carrying a hostile progenitor's brood. **As of Session 15 the underworld also knows his rate.**

SESSION 16 **holds at 8.5** The five he mocked fought him, and the Marrow Syndicate warehouse held a second device keyed to his powers. Already priced.

3 Intrepid 5.0

ALL-TIME Known by effect rather than by name. He is the one who ends fights — the hammer villain, Stote, Dragonborne, super-juicers going off the map, and in Session 14 a professional thief with an adamantine hammer, removed in one punch. Since Session 15 he is also known by a public comparison to the one hero every villain in the world has a plan for.

SESSION 16 **holds at 5.0** The brood's verdict on why it could not take him was his weight. That is a fact about him, not a new story.

4 Edge 4.0

DEBUT · SESSION 16 **Introduced to the underworld in one afternoon, by the people he beat.** He knocked out Blood Blade, put 101 into Stote, destroyed the device the brood came for, and got up from 0 in front of Blitzkrieg, whose summary was "*They keep coming back up like Daisys!*" Two of the five walked away to tell it.

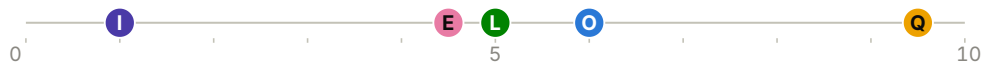

5 Oracle 3.5

ALL-TIME Recognised and the least discussed. The villains who fight him mostly learn they can't hit him, which is a quiet kind of reputation. Session 14 supplied a louder and less welcome story: an Olympian goddess held him in place for most of the fight and drained him from full to 3 Focus without ever attacking his body.

SESSION 16 **3.2 → 3.5 (+0.3) Somebody on the other side has studied him.** Dragonborne came prepared to answer Return Fire, his signature reaction, by turning it onto a teammate. A counter only exists where someone has done the reading. He stays last, because the story that circulates about him is still mostly about what works against him.

8.7 Fame — Civilian Life / Non-Superheroic Identity Exposure

How exposed the person behind the mask is.

1 Quasar-Force 9.5

ALL-TIME Total. Endo Wenas is publicly identified, his parents are known and reachable in Slate Hill, his father's employer is known, and his family's involvement with a clinician is documented. **There is no mask to be behind.**

SESSION 16 **holds at 9.5** Nothing changed.

2 Oracle 6.0

ALL-TIME Wade Dobson is not concealed, and Extreme Appearance means concealment is not available to him anyway. What limits the score is that few people are looking. He took second on the vacancy in Session 15.

SESSION 16 **holds at 6.0** Nothing changed.

3 Lock-Step 5.0

ALL-TIME For fourteen sessions he did not appear to have a civilian identity at all. **Session 15 supplied both halves at once**: a civilian identity, **Eric Williams**, and its link to the hero — an alien's text ("*Is this Eric Williams, known as the Gray Lantern of Earth?*", answered "*yes it is*"), a progenitor and a Grey Lantern calling him Eric, and his own face trending for a week. The exposure is held by parties outside Earth's institutions, which is the only reason this is 5.0 rather than higher.

SESSION 16 **holds at 5.0** Nothing changed.

4 Edge 4.5

DEBUT · SESSION 16 Murphy King has a public identity, "*not very well known*," and a face that is hard to mistake: white hair and eyes that glow black-red. A school, a family the roster does not describe, and a mentor whose name is public. FLAG Identity listed as "???" in the condensed entry.

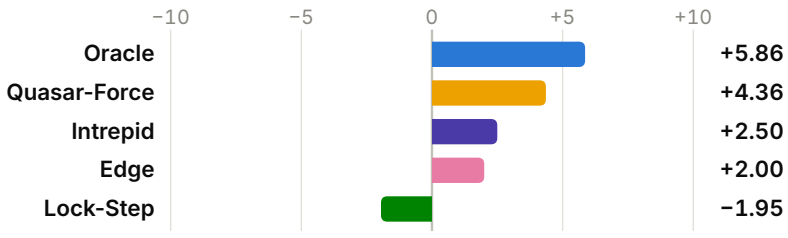

5 Intrepid 1.0

ALL-TIME The only fully Secret Identity on the roster, maintained without a single logged lapse.

SESSION 16 **holds at 1.0** Nothing changed.

SESSION 16 NOTE *No civilian identity was spoken in play, and no Titan published anything.* ***The exposure that moved this section was an enemy using what was already public.***

§9 Reputation / Opinion

Section mean on the composite scale, −10…+10 (§10.1.3)

Session 16 happened inside a warehouse and reached no public, no outlet and no institution in the log, so most of this section holds. The one movement among the returning four is Lock-Step on Nightwing, for the first time citing Nightwing's rule as the team's rule. Edge enters with an unusual profile: almost unknown to the public, and already well regarded by the heroes who brought him in.

9.1 Reputation — Public

1 Oracle +7.0

ALL-TIME Nothing negative attaches to him and nothing ever has. He heals people, asks for surrender first, is polite, and is visibly a teenager doing a hard job well. The viral stream of Session 15 introduced him to a large new audience as "*the guy that always tells us what we do wrong and tries to fix it*," which is a teammate's joke and an accurate résumé.

SESSION 16 **holds at +7.0** Nothing reached the public.

2 Intrepid +5.5

ALL-TIME Low salience because of the Secret Identity, and uniformly positive within that. Until Session 15 the public knew a strong man in a cape who helps. **Since Session 15 it has a story to attach to him, and it is the best one available:** "*maybe the next Superman.*"

SESSION 16 **holds at +5.5** Nothing reached the public.

3 Lock-Step +4.5

ALL-TIME Genuinely popular with the demographic that matters most for word-of-mouth, and carrying real risk. The hostage rescues, the yacht, the social media and the handcuff routine are all charming; the prisoner humiliation happened in front of witnesses. **Net positive, with a fuse in it.** Session 15 lengthened the fuse: the stream trended and the audience he built likes him, but on the same channel he mocked five released teenagers by face and captioned them *#SomeKidsJustNeedAWhooping*. Popular, net positive, and one reposted clip away from a very different number.

SESSION 16 **holds at +4.5** Nothing reached the public.

4 Edge +2.0

DEBUT · SESSION 16 Public but "*not very well known*," with nothing for or against him on record. His first public story, when it comes, could be a rescue or a legend about a monster, and the score sits slightly positive on the rescue.

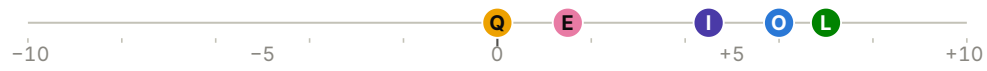

5 Quasar-Force +1.5

ALL-TIME **The highest variance on the team; the ranking reflects net position, not dislike.** He is simultaneously the most beloved and the most controversial figure the Titans have: a spectacular, obviously good-hearted flying child who saved hostages and flew a yacht for a party, and the boy who killed a man, which prompted protests, a threatened suit and a public argument about untrained children wielding lethal power. **The death has been the dominant public fact about him ever since.** Session 15 put a different fact in front of a large audience — a small boy at a console in the Justice League's station with the Earth behind him, building something. **The death is still the headline. It now has competition.**

SESSION 16 **holds at +1.5** Nothing reached the public.

VOLATILE *Two stories have not surfaced.* The Session 14 museum theft is still unreported; Wonder Woman has recovered all three artifacts, so if it runs now it runs as a League recovery. **The new one is worse.** If the warehouse fight reaches the public, its headline is three teenagers left unconscious in a mob warehouse, one of them in handcuffs, by a team whose public voice had mocked all five of them a week earlier.

9.2 Reputation — Media

1 Lock-Step +7.0

ALL-TIME Media-native. He poses, posts and supplies quotable lines, and the handcuff ritual is a recurring bit that writes its own headline. He generates coverage deliberately, and it comes back positive. Session 15 was a larger audience with more ammunition in it: a week of his own coverage, still positive, and for the first time material a hostile outlet would want — a public shaming of minors with a hashtag. It has not been picked up yet.

SESSION 16 **holds at +7.0** Nothing published, nothing picked up.

2 Oracle +6.0

ALL-TIME The safe, sympathetic angle: a cyborg teenager who heals people and asks criminals to surrender. There is no negative story about him available.

SESSION 16 **holds at +6.0** Nothing changed.

3 Intrepid +4.5

ALL-TIME A classic-looking hero in a red cape, with nothing to write about and nothing bad to write. Since Session 15 the Superman line writes his headline for him.

SESSION 16 **holds at +4.5** Nothing changed.

4 Edge +1.5

DEBUT · SESSION 16 No coverage on file. The angle an outlet would find is the most striking one on the team — white hair, glowing eyes, a teenager trained by Black Canary — and the most dangerous if the word *monster* ever gets attached to it.

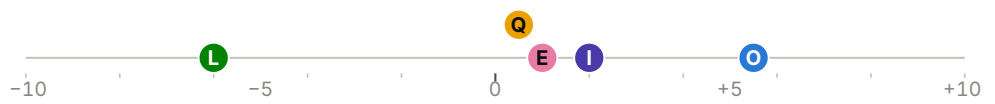

5 Quasar-Force 0.0

ALL-TIME **The best footage and the best controversy at once, which is the worst possible combination.** The yacht flight, the upside-down bank hover and the cosmic nanosuit are irresistible imagery; the fatality handed the same outlets a story about unsupervised children with lethal powers, and a science advocate's chemical-exposure theory is running. Session 15's week of Watchtower laboratory footage brought him to exactly neutral by giving every outlet a second, much better story about the same boy.

SESSION 16 **holds at 0.0** Nothing changed.

9.3 Reputation — Law Enforcement (Police, Criminal Justice System)

Same scope as 8.3 — police, detectives, prosecutors, criminal courts, corrections, and federal enforcement, at every level.

1 Oracle +5.5

ALL-TIME He demands surrender before engaging, heals the people he fights, and has never generated an incident report. Officers arriving after an Oracle engagement find restrained suspects and no bodies, which is the single thing this apparatus most wants from a costumed teenager. He took first on the vacancy in Session 15, when Exemplar II's police connections left with him.

SESSION 16 **holds at +5.5** Nothing reached the apparatus.

2 Intrepid +2.0

ALL-TIME Unknown to them and carrying nothing negative. He sits above the members below him only because they carry complications he does not.

SESSION 16 **holds at +2.0** Nothing changed.

3 Edge +1.0

DEBUT · SESSION 16 Unknown to them, no record, and one first fight in which every member of the opposition he dropped was knocked out rather than killed. Below Intrepid because his public identity gives the apparatus a name to attach anything to.

4 Quasar-Force +0.5

ALL-TIME Working officers regard him well: he gives statements in person, maintains chain of custody, hands over evidence unprompted, and arranged the noise-complaint diversion with them rather than around them. **But the apparatus is not only its officers.** Prosecutors and a criminal court hold an open death investigation, Lex-Corp's counsel is pushing a wrongful-death theory into the same system, and ARGUS holds him as a cultivated asset. NOTE In Session 15 he also said "*I say get them involved*" about a villain team's burglary; the apparatus does not know that.

SESSION 16 **holds at +0.5** Nothing changed.

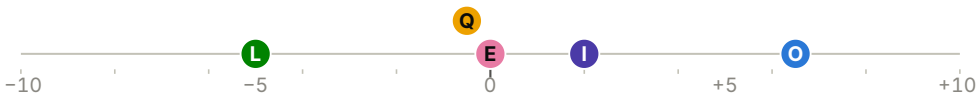

5 Lock-Step −6.0

ALL-TIME Habitual breaking and entering, a restrained prisoner humiliated in front of witnesses, and an assault on a minor teammate that a defence attorney would find in an afternoon. **Every one of those is a chargeable offence rather than a bad look.** Session 13 put the first items on the other side: a cuffed prisoner properly handed over, and three exonerated victims asked whether they would testify. Session 15 added something the apparatus can watch rather than has to discover — released juvenile offenders broadcast by face with a prescribed "*whooping*" — and, out of its sight, a solicited burglary and killing witnessed by a villain.

SESSION 16 **holds at −6.0** The new item is one the apparatus does not have yet: one of those same juveniles, knocked out and left in handcuffs in a crime syndicate's warehouse. The rule he applied while doing it — "*we can bring them back, so knock them out*" — is the one the apparatus would want. This axis moves when someone finds her.

9.4 Reputation — Other Non-Superheroic Institutions

Same boundary as 8.4 — corporations, research bodies, civil courts, licensing and revenue systems, schools, and city government.

1 Oracle +6.5

ALL-TIME Institutions are built to approve of people like him. STAR Labs would regard him as a success story worth publicising, and no corporation, civil court or school has a reason to think about him twice. Nothing in any file anywhere counts against him.

SESSION 16 **holds at +6.5** Nothing changed.

2 Intrepid +2.0

ALL-TIME Unknown, compliant, and carrying no negatives. A Secret Identity means institutions have almost nothing to form an opinion from.

SESSION 16 **holds at +2.0** Nothing changed.

3 Edge 0.0

DEBUT · SESSION 16 The one institution with a file on him is a school, and the file says his grades were "*already bad*" before the powers arrived. Nothing else for or against.

4 Quasar-Force −0.5

ALL-TIME Against him: a corporate legal department that has issued a cease-and-desist and is circulating a wrongful-death threat. For him, and growing: STAR Labs is positive about him in its own right, a board-level CFO gave him a morning, and the Celestial Research Division's lead scientist wants to study him. **The institutions that like him are the ones with no power over him.** In Session 15 he traced a STAR Labs executive's vehicle and watched its garage — no violation at all, and exactly the kind of thing a corporation holding an alien parasite would prefer nobody did.

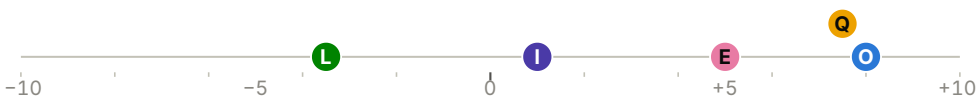

SESSION 16 **holds at −0.5** Nothing changed.

5 Lock-Step −5.0

ALL-TIME A truancy record he is actively extending, and conduct that does not stay inside the criminal file it starts in: a school or a licensing body that learns about the sedation of a minor teammate has its own reason to act. Session 15 extended the truancy to make-up classes, put a STAR Labs employee's face and vehicle on a public stream, and posted minors on platforms that have policies about exactly that. **A school, a corporation and a platform each acquired their own reason to act.**

SESSION 16 **holds at −5.0** Nothing changed.

9.5 Reputation — Broad Superhero Community

1 Oracle +8.0

ALL-TIME He reports honestly, defers to Nightwing, refuses unethical requests from teammates, and prioritises healing over glory — exactly the profile senior heroes want to see in a teen team and recommend to each other. Session 14 was the behaviour that makes the reputation: he called the Justice Leaguer who gave them the job and told her they had failed.

SESSION 16 **holds at +8.0** Nothing reached the community. A team that briefed Wonder Woman the same afternoon is the kind of report it hears.

2 Quasar-Force +7.5

ALL-TIME Wonder Woman, asked who the smartest person in the Justice League was, pointed at him. He shares intelligence proactively with police, public superhero forums and Nightwing, and offered Wonder Woman all of his data unasked. A serving Green Lantern took a personal interest. In Session 14 a founding member judged him worth protecting personally, and in Session 15 he spent a week working beside the League's specialist in their station and kept a Green Lantern informed exactly as promised. OOC Against it: the fatality, and Apokoliptian-modified hardware in his skull that unsettles anyone who learns of it.

SESSION 16 **holds at +7.5** Nothing changed.

3 Edge +5.0

DEBUT · SESSION 16 **Vouched for before he arrived.** Black Canary volunteered to train him, the Birds of Prey took his call for help, and Nightwing, operating as Batman, recruited him personally. That is two senior heroes and a network with a stake in him, which is more than two of his teammates have after sixteen sessions. The rest of the community has not met him.

4 Intrepid +1.0

ALL-TIME Nobody has an opinion, and nothing negative exists to form one from. His one extended appearance before a senior hero, the Session 14 debrief, is scored in 9.10. A teenager promoted on a teammate's phone as the next Superman is not yet an opinion, and among people who know Superman it may be a joke.

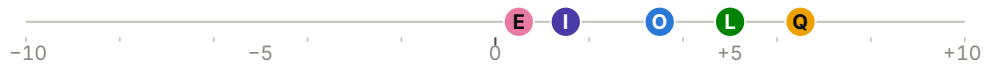

SESSION 16 **holds at +1.0** Nothing changed.

5 Lock-Step −3.5

ALL-TIME The magical community is split three ways on him, with the hostile vote held by Doctor Fate, and the conventional community would object to nearly everything he does if it knew. Guy Gardner found him funny; Wonder Woman found him transparent, and she is the one the others will ask. In Session 15 a Grey Lantern tested him and named him her successor, and Wonder Woman's reply was "*What is a gray lantern?*" **The first cape-adjacent order to rate him highly is one nobody else has heard of.**

SESSION 16 **holds at −3.5** Nothing reached the community. NOTE The first thing the community's newest connection to this team heard from him was that "*all the adults are trash.*" Black Canary's student will have a version of that to report.

9.6 Reputation — Broad Supervillain Community

1 Quasar-Force +6.5

ALL-TIME **Villains like him, and it is measurable.** Shadow-Boxer said he respects this team because they keep their word; Cassidy Yanks volunteered her real name because he was nice to her; World Ender's facade collapsed under sincerity. The counterweight: uncooperative professionals read him as a child to be played, and he is the one who accidentally killed a man. In Session 15 he locked the Destined out of the tower and then said, of the same team, "*Maybe they'll stop being assholes too.*"

SESSION 16 **holds at +6.5** The brood went for him first on tactics, not animus, and said so.

2 Lock-Step +5.0

ALL-TIME The surrender ritual is a genuine kindness in a business without much of it, and villains have cuffed themselves rather than fight him. Against it, he humiliates the ones who refuse, and Shadow-Boxer's recruitment attempt suggests some read him as one of their own. **Session 15 added the thing the underworld respects more than kindness: he is a client.** Fade-Out's verdict: "*About time you stepped up the leadership.*"

SESSION 16 **holds at +5.0** **Even the brood liked the offer.** Argent began to accept the cuffs before her controller reasserted itself, and Dragonborne called it "*a good idea, but something inside us is telling us not to.*" He knocked out one of the five he had mocked and left her cuffed, which the underworld will remember too.

3 Oracle +3.5

ALL-TIME He heals people who were trying to kill him minutes earlier and attempted to revive a dead enemy. That gets around a jail block fast.

SESSION 16 **holds at +3.5** Every point of damage he dealt was Focus, and the one he drove off left on his own feet.

4 Intrepid +1.5

ALL-TIME Feared and respected as a physical fact, with no personal animus in either direction. He hits you and it's over and it wasn't personal.

SESSION 16 **holds at +1.5** Nothing changed.

5 Edge +0.5

DEBUT · SESSION 16 Barely an opinion yet, and an exasperated one: "*They keep coming back up like Daisys!*" He knocked out one of the five and destroyed what they came for, and his attempt to intimidate the last two with his monstrousness did not move them.

9.7 Reputation — Iron-Side

Inferred from a professional educator's frame: methodical, disciplined, non-authoritarian, deliberately not appointing a leader, reporting to Nightwing daily, and — by her own statement — taking notes. Session 14 revised the frame: she has significant medical training. Session 15 revised it again: she will physically correct a student, a pinch on the back of the neck, and it worked. ***Iron-Side does not appear in Session 16.***

1 Quasar-Force +8.5

ALL-TIME The ideal student from her position, and he has gone out of his way to signal it. He thanked her for teaching them, fell straight into her structured wake and bedtimes, and defended her hazard pay to Lock-Step's face, in front of her. In Session 14 she took a knife out of him herself and sat with him through the night. In Session 15 eight-hour make-up days produced no complaint from him that the log records.

SESSION 16 **holds at +8.5** He defended the adults to the newcomer in her absence: "*Well everyone is busy, and we're busy too.*"

2 Oracle +6.5

ALL-TIME Compliant, structured and cooperative, and content to follow whatever education Nightwing prefers. In Session 12 he handled an absence the way she would want, obtaining a note rather than simply not appearing. Undemanding, reliable and easy to teach.

SESSION 16 **holds at +6.5** Nothing changed.

3 Intrepid +3.5

ALL-TIME First up every morning, no friction, no complaints, and no engagement either. A perfectly fine student who leaves no impression. He knew where the library was.

SESSION 16 **holds at +3.5** Nothing changed.

4 Edge +1.0

DEBUT · SESSION 16 Not yet met in the log. The file she will open has School as an Obligation and grades that were "*already bad*"; the student she will meet asked for a plan and a briefing before he walked into his first fight, which is the habit she pinched Lock-Step for not having.

5 Lock-Step −6.5

ALL-TIME He argued with her at their first meeting, called her a finishing-school teacher, called her school fake to her face, accused her of doing it only for the money, insinuated that her absence during the Destined incursion was suspicious, and shows up last or not at all. Her calm reply — "*I am taking notes*" — remains the most quietly ominous line in the campaign. In Session 15 he slept through as much of her make-up teaching as he could and was pinched for not listening in briefings — and then, for the first time, asked her a question and followed the answer.

SESSION 16 **holds at −6.5** **The first thing he told the newcomer about her was the old grievance:** during the breaches she "*lived in the security room*," and "*I got stonewalled.*" One civil question in Session 15 has not yet changed what he says about her when she is not there.

9.8 Reputation — Nightwing

SESSION 16 NOTE ***Nightwing is off screen for a third consecutive session, and in this one he acted.*** *Operating as Batman, he recruited Edge and briefed him on the five villains, and the team did not know. Lock-Step cited his rule to set the team's rules of engagement. The team made no report to him; it briefed Wonder Woman. The lethal errand he has not heard about is still outstanding.* ***Scores are carried on earlier evidence plus what Session 16 implies.***

1 Oracle +8.5

ALL-TIME Nightwing's channel into this team, formalised in Session 12. He called about the artifact knowing exactly how Lock-Step would react, and did it anyway. When Nightwing needed somebody in a room with a STAR Labs board member, he arranged it for Oracle, and he named him alongside Quasar-Force as equal to or better than the League bench. With his mentor unreachable in Session 14, he escalated to the next appropriate authority immediately and told her the truth. NOTE Session 15 was the first session in which the channel carried nothing Nightwing would have wanted to hear, and "*It's no different than Nightwing*" the first critical thing anyone in Oracle's file has said about his mentor.

SESSION 16 **holds at +8.5** NOTE **Nightwing's one act this session went around the channel**: he briefed the newcomer, not Oracle. It reads as a recruiter briefing his recruit, and it is not scored.

2 Quasar-Force +7.0

ALL-TIME Historically the primary correspondent: a proactive intelligence-sharer, evidence-disciplined, and credited by name for the security upgrades. Session 13 aired the mother-box friction and largely settled it. Session 15 took half a point on implication: the boy Nightwing has watched since before he had a codename endorsed bringing in the Destined — the team that breached the tower Nightwing designed — and endorsed Fade-Out's "*full lethal fury.*"

SESSION 16 **holds at +7.0** Nightwing would also read "*We sent the murder hobos after the bad progenitor.*" The file already holds the sentence that matters.

3 Edge +6.0

DEBUT · SESSION 16 **Chosen by Nightwing personally.** Operating as Batman, he recruited Edge to fill the vacancy and briefed him on the five villains before the fight — the only Titan he is recorded as briefing this revision. A recruiter's confidence is not a track record, which is why Edge starts below the two members Nightwing has worked with longest.

4 Intrepid +1.5

ALL-TIME No problems and no contribution. Invited to raise concerns at a round-table convened specifically to hear them, he had none.

SESSION 16 **holds at +1.5** Nothing changed.

5 Lock-Step −5.0

ALL-TIME He tried to conceal a dangerous temporal artifact from Nightwing, told the room Nightwing can't be trusted with their security, was angry that Oracle reported it, and sedated a minor teammate. The redemption path has been visible since Session 13: Nightwing structured the artifact's custody so Lock-Step keeps access on his own terms, volunteered to arrange his pay personally, and talks about him with amused affection. Session 15 was a list of the things Nightwing's professional life is organised to prevent — a League facility broadcast, a surveillance post broadcast, carelessness with identities, and Nightwing's own detractors hired and asked to kill a detainee.

SESSION 16 **−5.5 → −5.0 (+0.5)** **For the first time in his file he used Nightwing as an authority rather than against him.** "*Nope, nope, Nightwing did say we can bring them back, so knock them out*" — and then he applied it all fight. Against it, in the same breath: "*The other situation, is that other team's problem,*" which is the errand Nightwing has not heard about, and "*Like Batman or Nightwing, they didn't even fill him in,*" which was wrong. **The redemption path got its first step.**

9.9 Reputation — Batman

Batman is injured, unable to fight, and has time to read files. OOC *He holds the dormant mother-box shell and has probably concluded that Quasar-Force will not age. Absent in Session 16; scored on what his file would now contain. Nightwing used his mantle to recruit the newcomer.*

1 Oracle +7.0

ALL-TIME A clean record, honest reporting, medical support, and a STAR Labs predictive module that is both tactically valuable and technically auditable; Batman likes people whose capabilities he can verify. Session 14 added the behaviour he values above all others: a total failure reported immediately and in full to the responsible authority, by the person it was least comfortable for. NOTE Since Session 15 his module resonates with a teenager's time-altering powers, which is the kind of sentence Batman reads twice.

SESSION 16 **holds at +7.0** The page Batman would mark: an enemy who answered his Return Fire with a reaction of its own.

2 Intrepid +5.0

ALL-TIME A Secret Identity, and Batman approves. No secrets, no factions, no technology he didn't earn, no complications, and no file to maintain. Boring is a compliment in this room.

SESSION 16 **holds at +5.0** Nothing changed.

3 Edge +2.0

DEBUT · SESSION 16 Recruited under Batman's name by somebody else. Bruce Wayne, reading the file, finds a Monster-origin fifteen-year-old with a legend about cutting down armies, a power that slices through objects by concentration, Black Canary vouching for him, and one clean fight. **Batman likes capabilities he can verify, and nobody can yet verify what the legend is.**

4 Quasar-Force +1.0

ALL-TIME **The most divided assessment in the campaign.** OOC Batman holds the mother-box shell, ordered the periodic scans, and knows about the frozen aging; he will regard Endo as one of the most dangerous unresolved variables in Blüdhaven, and since Session 14 the variable has had an external claimant. At the same time, Endo's conduct is exactly the behaviour Batman rewards and rarely gets from teenagers. **High opinion of the boy; alarm about the situation.** Session 15 moved both halves in opposite directions: the box is masked from the New God hunting it, and the file on a fourteen-year-old now contains "*full lethal fury.*"

SESSION 16 **holds at +1.0** The situation half improved again — the circlet held against a power thief — and the boy half added "*murder hobos.*" They cancel.

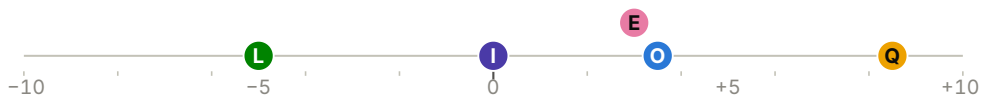

5 Lock-Step −7.5

ALL-TIME The file is thick and none of it is reassuring: chaos magic, Doctor Fate's declared hostility, concealment from Nightwing, the sedations, prisoner abuse, an unidentified party that profiled him with a temporal artifact, and a founding member of the League who felt the need to use a compulsion artifact on him. Session 15 added proxy murder, public exposure, an open mind and an outside claim. **In fairness, and Batman is fair:** he also talked a planet out of a war, refused a burglary on principle, and asked Iron-Side for help. **The pattern under the misconduct is a teenager who does the right thing when he has time and outsources the wrong thing when he doesn't.**

SESSION 16 **holds at −7.5** Both columns got a page. **For:** the non-lethal rule stated and kept, surrender offered twice, consent asked, and four teammates extracted. **Against:** a minor he had publicly mocked, knocked out and left in handcuffs in a crime syndicate's building. The pattern holds.

9.10 Reputation — Justice League

After the fight, the team went back to the tower and briefed Wonder Woman; the log does not record who spoke or what she said. The League took no part in Session 16. Edge's mentor, Black Canary, gives the League a new connection to the team that does not run through Quasar-Force.

1 Quasar-Force +8.5

ALL-TIME Wonder Woman, asked who the smartest person in the Justice League was, **pointed at him.** In Session 14 professional regard became institutional responsibility: she extended personal protection to him, moved him into the Watchtower, assigned the League's mother-box specialist to his case, and undertook to raise the matter with New God contacts. **The League has adopted his problem.** In Session 15 he was a good guest, delivered three devices, and kept the League informed from the ground. OOC Against it: New Genesis technology modified on Apokolips, in a child, is a League-level concern.

SESSION 16 **holds at +8.5** Nothing changed.

2 Oracle +3.5

ALL-TIME A STAR Labs product with clean conduct, regarded positively without anyone having to think about it. Session 14 gave the League reasons to think about it: he made the failure call himself, produced the exact inventory of what was taken, and was the one who said the apology counted. Doctor Taleria also found his hardware "*fascinating,*" a separate and less comfortable kind of attention.

SESSION 16 **holds at +3.5** Nothing changed.

3 Edge +3.0

DEBUT · SESSION 16 Black Canary volunteered to train him, and her opinion carries weight with the League in most versions of it. Nobody else there has heard of him. Third on arrival, on a single sponsor.

4 Intrepid 0.0

ALL-TIME Very nearly unknown to them, with a share of the collective credit for the Session 13 capture. In Session 14 he spent an extended debrief in front of a founding member saying that nothing could have been done better, that "*we are not going to win every battle*," and that complaining gets you replaced. Nothing malicious and nothing disqualifying, and not what you want in the file. In Session 15 a stream shot in their station called him the next Superman.

SESSION 16 **holds at 0.0** Nothing changed.

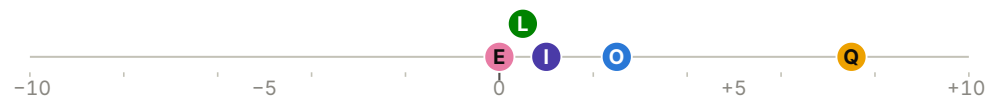

5 Lock-Step −5.0

ALL-TIME If Doctor Fate has an opinion, the League will hear it, and his conduct record will not survive first contact with Superman. Session 14 happened in the League's own house: an argument with Wonder Woman about mission tiers, a rant, solicited souvenirs, the Lasso of Truth, and access restricted to the guest quarters. Session 15 added the stream of their station, "*So you're not going to help? Again?*", and "*Diana.*" **For, and it is genuinely League-shaped:** a Lantern asked for "*Justice League*" and got the Titans, and he handled it better than the League's own reputation suggests it would have.

SESSION 16 **holds at −5.0** His opening to the newcomer included the same complaint — "*But you have the Justice League. Why are you not helping us?*" — said, this time, out of the League's hearing.

9.11 Reputation — Green Lantern Corps

THIN EVIDENCE *Still the least-supported axis in the document. Session 15 added two direct Corps contacts and one enormous indirect item;* ***Session 16 adds nothing.*** *Volatile throughout.*

1 Quasar-Force +7.5

ALL-TIME **A near-monopoly.** Guy Gardner sought him out, made him a sandwich with the ring because he asked how it worked, got genuinely angry on his behalf that nobody had told him what was fused to his nervous system, and offered Corps files on the mother box; Nightwing endorsed the relationship. In Session 15 Quasar-Force called him the moment the progenitor threat looked real, with the critical caveat that one progenitor is civilised, and followed up by text — **the Session 13 instruction used exactly as given.** NOTE Guy's opinion of the boy is very high. The Corps has not formed one.

SESSION 16 **holds at +7.5** No contact.

2 Oracle +2.5

ALL-TIME Collective credit and nothing against him, which on this axis is worth second place. **He is the member whose conduct this organisation would like best if it ever looked.** None of it has reached Guy.

SESSION 16 **holds at +2.5** Nothing changed.

3 Intrepid +1.0

ALL-TIME Zero contact, zero record, and a share of the collective credit for a capture Guy rated highly.

SESSION 16 **holds at +1.0** Nothing changed.

4 Lock-Step +0.5

ALL-TIME More contact with a Green Lantern than anyone but Quasar-Force, and it ended well — "*no hard feelings*" — after he argued that heroes should be paid and then phoned a bank to drain the man's account. Guy's "*messing with time, that's probably not a great thing*" was the first Corps-relevant flag on his name. Session 15 repeated the first contact ("*Put some more money into your account!*") and added an indirect item nobody knows the sign of: powers read as lantern-derived and linked to Oa, and a ring from a different order that works in time. **A Lantern was amused. A Guardian would not be.**

SESSION 16 **holds at +0.5** No contact. VOLATILE A crime syndicate held a device keyed to his time manipulation, which is the sort of fact that reaches Oa eventually.

5 Edge 0.0

DEBUT · SESSION 16 No contact and no record. The Corps does not know he exists.

§10 Aggregates And Cross-Cutting Synthesis

10.0 Why Three Scales

A single 0–10 scale cannot express liability. Intrepid's engineering is `0.5`, which is an absence. Lock-Step's standing with Iron-Side is `−6.5`, which is an active debt that is accumulating and already has consequences in motion. Flattening both to "low" loses the distinction that matters most for play.

A single −10…+10 scale cannot express absence. Scoring Intrepid's engineering at −9 would claim that his engineering *harms* the team, which is false. He simply isn't an engineer, and nobody expected him to be.

So the scale follows the axis. Capability and exposure are magnitudes (`0.0–10.0`). Psychology, standing and opinion have genuine negative poles (`−10.0…+10.0`). Threat exposure is only ever a cost (`0.0…−10.0`). **The aggregates normalise everything onto one consistent signed scale**, because a composite is useless if its components point in different directions.

Recommendation: use `−10…+10` for composites. The sign separates "contributes less than a competent peer would" from "is a net drag", and three of five PCs now sit close enough to zero that an unsigned scale would hide which side they are on. A 0–10 rescale is in 10.1.6.

Conversion. Magnitude axes map as **(score − 5) × 2**, anchored so that 5.0 (the competent Rank 3 baseline) becomes 0. A negative there means "*this far below what a baseline peer would bring*," not "*actively harmful*."

NOTE ON COMPARABILITY THIS REVISION **Score-based figures (10.1) are per-character means, so Edge's arrival changes none of the returning four's figures**, and every Session 15 figure in parentheses is the published one. **Position-based figures (10.2) depend on who else is on the board.** A five-person board runs 1–5, and adding a member moves the others down wherever he ranks above them: Edge ranks above Oracle on 23 axes, Quasar-Force on 26, Lock-Step on 39 and Intrepid on 57. Section 10.2 therefore reports the five-person board and, for the returning four, a **like-for-like comparison** — Session 16 scores with Edge removed and positions re-counted — against the published Session 15 four-person figures.

10.1 Aggregate Standing — Score-Based

10.1.1 The Indices

Every index below is defined by an explicit section range. Session 15 figures are given in parentheses where the number moved by 0.05 or more.

A — Capability And Fame / Exposure (*magnitude, 0–10; 5.0 = competent Rank 3 baseline*)

PC	Combat §4 *(22)*	Non-Combat §5 *(17)*	Robustness §6 *(6)*	All Capability §4–§7 *(52)*	Fame / Exposure §8 *(7)*
Quasar-Force	**6.90**	**8.09**	4.80	**7.29**	**9.17**
Lock-Step	6.76	5.13	**5.30** *(5.38)*	6.06	6.94
Oracle	6.61	6.86	5.08	6.67	4.99
Edge	5.65	3.62	5.12	5.03	**3.00**
Intrepid	**5.19**	**1.86**	**4.67** *(4.83)*	**4.04**	3.33

B — Character, Standing, And Risk (*valence −10…+10, except Risk 0…−10*)

PC	Character §1 *(14)*	Team Standing §3.1–3.5 *(5)*	External Reputation §9 *(11)*	*— all three combined (30)*	Risk Load §2 *(8)*
Oracle	**+7.36**	**+7.60** *(+7.50)*	**+5.86**	*+6.85*	−4.75 *(−4.69)*
Quasar-Force	+5.82 *(+5.75)*	+5.60	+4.36	*+5.25*	**−9.06** *(−9.00)*
Edge	+4.00	+5.20	+2.00	*+3.47*	−5.00
Intrepid	+3.18 *(+3.00)*	+5.10 *(+5.20)*	+2.50	*+3.25 (+3.18)*	**−3.25** *(−3.12)*
Lock-Step	**−3.21** *(−3.46)*	**+4.70** *(+4.50)*	**−1.95** *(−2.00)*	***−1.43*** *(−1.60)*	−8.25 *(−8.12)*

The combined column is the basis used by the composite in 10.1.2 and is shown for continuity. §3.6–3.9 (Command Chair and Pecking Order) are magnitude axes and sit in Table A's Capability figure instead. Bold marks the best and the worst figure in each column.

Session 16 moved no index by as much as three tenths. The largest movements on the board are all Lock-Step's or Intrepid's, and none of them is large:

- **Lock-Step.** Character +0.25 (−3.46 → −3.21), Team Standing +0.20 and Combined +0.17, on the first consent question he has asked in a fight, an extraction under fire, and the first explanation of himself he has given a teammate. Against: Risk −0.13 and Robustness −0.08, on a device keyed to his powers, a cuffed teenager, and one roll outside the warehouse.
- **Intrepid.** Character +0.18, on refusing an extraction, against Robustness −0.16, Risk −0.13 and Team Standing −0.10, on the first power stolen from a Titan and the first extraction he has cost.
- **Oracle.** Team Standing +0.10, to +7.60, on being named the plan guy and carrying the fight. Combat rose four hundredths and Risk fell six.
- **Quasar-Force.** Character +0.07, and Risk −0.06 to **−9.06, the lowest Risk Load on the board**, on a hostile team that targeted him for his fame and its orders to collect.

Edge enters with the flattest profile on the board. He is third on the combined character-standing-reputation figure (+3.47), ahead of Intrepid; fourth on Combat (5.65), also ahead of Intrepid; and second on Robustness (5.12), behind Lock-Step and ahead of Oracle. **His Fame index of 3.00 is the lowest on the board**, which for a member of this team is good news. His weakest index is Non-Combat, at 3.62.

The combat index is still led by Quasar-Force, by fourteen hundredths over Lock-Step, against seventeen last pass. Oracle's rose four hundredths, on the session in which the team's survival ran through him.

10.1.2 Composite Net Score

*The **94 non-neutral axes** normalised to −10…+10. Fame is excluded, matching the polarity classification in 10.2.1; a fame-inclusive version is in 10.1.6. Composites are shown to three decimals this revision, because at two the top-two margin reads 0.40 when it is 0.394.*

PC	Composite	Median	SD	Range	Read
Oracle	**+3.888** *(+3.840)*	+5.6	4.98	−9.0 → **+10.0**	The lead widens for the first time since 0.77 → 0.81
Quasar-Force	**+3.494** *(+3.482)*	**+5.8** *(+5.6)*	**5.77**	**−10.0** → +9.6	Nearly flat; the median passes Oracle's
Edge	**+0.566**	+1.8	**4.72**	−9.0 → +8.8	Third on debut, with no score at either extreme
Lock-Step	**+0.068** *(+0.023)*	0.0 *(−0.3)*	5.73 *(5.70)*	**−10.0** → +9.6 *(+9.4)*	Further across zero, and out of third
Intrepid	**−0.531** *(−0.520)*	+0.8 *(+0.6)*	5.10	−9.0 → +9.2 *(+9.6)*	Flat

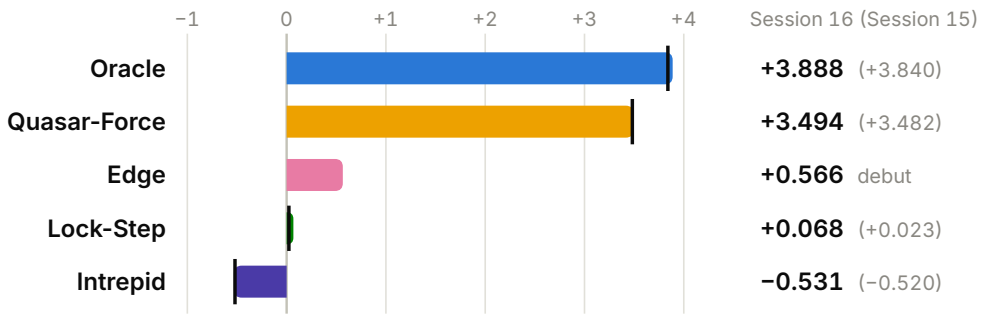

Oracle leads by 0.39, up from 0.36. The history now runs 0.77, 0.81, 0.77, 0.72, 0.36, and **0.39** — the first time the lead has widened since 0.77 → 0.81. Both men rose, Oracle by 0.048 and Quasar-Force by 0.012. **Session 16 tested what Oracle does and not what Quasar-Force does**: the fight ran on healing, debuffs and a plan, and nothing in it needed an engineer. Quasar-Force's median now passes Oracle's (+5.8 against +5.6), which says his typical axis is slightly better than Oracle's typical axis; his tails are why the mean is not.

Edge enters third at +0.566, ahead of Lock-Step by 0.50 and Intrepid by 1.10. **He has the narrowest distribution on the board (SD 4.72) and no score at either end of the scale**: his highest normalised axis is Ranged (+8.8) and his lowest are four 0.5s worth −9.0 each, two of them tie-breaks. A debut file is a file with no deep negatives yet, which is a real advantage on this measure and a reason to read it as provisional.

Lock-Step crosses further — −0.04, +0.02, +0.07 — and loses third place anyway, to a member with an afternoon of record. Twenty-four of his axes moved, sixteen for the better and eight for the worse, netting +0.045. His median rises to exactly zero.

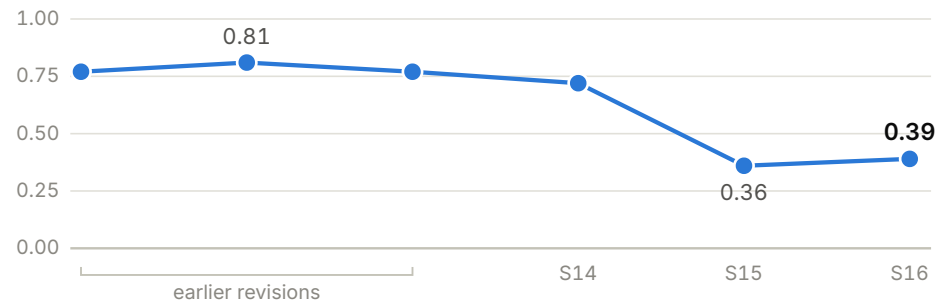

Intrepid falls 0.011, the only returning member to go down. His thirteen movements split six better and seven worse, and four of the six better ones are character.

Composite net score, 94 axes

Bars show the Session 16 composite on the −10…+10 scale; black ticks mark Session 15. Edge debuts this revision.

Oracle's composite lead over Quasar-Force

The lead as published in each revision of this document. Session 16 is the first widening since 0.77 → 0.81.

10.1.3 Section Means on the Composite Scale

Section	n	Oracle	Quasar-Force	Lock-Step	Intrepid	Edge
1 — Psychology & Discipline	14	**+7.36** *(+7.32)*	+5.82 *(+5.75)*	**−3.21** *(−3.46)*	+3.18 *(+3.00)*	+4.00
2 — Enemy Risk	8	−4.75 *(−4.69)*	**−9.06** *(−9.00)*	−8.25 *(−8.12)*	**−3.25** *(−3.12)*	−5.00
3 — Team Internals	9	**+6.98** *(+6.72)*	+3.71	+3.17 *(+3.19)*	**+0.39** *(+0.44)*	+1.33
4 — Combat	22	+3.23 *(+3.14)*	**+3.79** *(+3.78)*	+3.53 *(+3.44)*	**+0.37**	+1.30
5 — Non-Combat	17	+3.72	**+6.18** *(+6.15)*	+0.26	**−6.28**	−2.75
6 — Robustness	6	+0.17	−0.40	**+0.60** *(+0.77)*	**−0.67** *(−0.33)*	+0.23
7 — Overall	7	+5.43 *(+5.40)*	**+7.43**	+3.54 *(+3.49)*	**+0.46**	+2.86
8 — Fame	7	−0.03 *(−0.11)*	**+8.34** *(+8.26)*	+3.89	−3.34	**−4.00**
9 — Reputation	11	**+5.86**	+4.36	**−1.95** *(−2.00)*	+2.50	+2.00

The largest section movement on the board is Intrepid's Robustness, −0.33 → −0.67, on a power stolen in the middle of a fight and the fourth consecutive session in which something other than damage beat him. Behind it come Oracle's Team Internals (+6.72 → +6.98, the room naming him its planner and following the plan) and Lock-Step's Psychology (−3.46 → −3.21). Nothing else moved by a quarter of a point.

Robustness widened again, from 1.17 to 1.27 end to end, after compressing for the first time last revision. Lock-Step still leads it and Intrepid now trails it; the newcomer enters second, above Oracle.

Edge's sections sit between the extremes almost everywhere. His best section mean is Psychology (+4.00), third behind Oracle and Quasar-Force, and his worst is Enemy Risk (−5.00), which is a middling risk profile rather than a bad one. His one section last is Fame, where last means least exposed.

Quasar-Force improves on five sections and holds on four, and his Enemy Risk mean (−9.06) is still the lowest section figure on the board.

10.1.4 Gaps and Photo Finishes

Widest 1st-to-2nd gaps — genuine monopolies (*fame excluded; parentheses are the Session 15 gaps*):

Axis	Leader	Gap
4.15 Healing	Oracle	**7.0** *(7.0)*
4.11 AoE Damage	Intrepid	**6.6** *(6.6)*
5.2 Engineering	Quasar-Force	5.3 *(5.3)*
3.6 Command Chair — External Appointment	Oracle	5.0 *(5.0)*
9.10 Justice League	Quasar-Force	5.0 *(5.0)*
9.11 Green Lantern Corps	Quasar-Force	5.0 *(5.0)*
5.3 Cyber & Information Warfare	Quasar-Force	4.8 *(4.8)*
1.1 Psychological Stability	Oracle	4.5 *(5.5)*
1.14 Justice League Vetting — Character	Oracle	4.5 *(4.5)*
9.4 Other Institutions	Oracle	4.5 *(4.5)*
5.10 Social Engineering	Lock-Step	4.0 *(4.0)*

Healing is still the widest gap in the document, and Session 16 is the session it was for. Every member of the team went to zero or below, and every recovery went through the one person on this table at the top of it.

The newcomer broke up three of last revision's twelve monopolies by taking second place: Psychological Stability (5.5 → 4.5), Adult and Peer Safety Net (4.5 → 3.0) and Power Independence (4.5 → 0.5, where Intrepid also fell half a point). Last revision a departure widened the gaps by removing a runner-up; this revision an arrival narrowed them by supplying one.

Tightest 1st-to-2nd — coin flips:

- **5.1 Leadership**, Quasar-Force over Oracle by 0.1, for a second revision. **It is the only 0.1 photo finish left in the document.**
- At 0.2: **Overall Value** (Oracle over Quasar-Force, widened from 0.1), **Mental Durability** (Lock-Step over Quasar-Force, narrowed from 0.5 on the circlet's first test), **Single-Target Damage** (Intrepid over Edge), Combat Synergy, Stealth and Growth.

Three of last revision's four 0.1 photo finishes opened up, and all three opened in Oracle's favour: Pecking Order (0.1 → 0.3), Enemy Debuff (0.1 → 0.4) and Overall Value (0.1 → 0.2). Last revision said "*one more session like it and this flips*" about Enemy Debuff. Session 16 settled the photo finishes, and it settled them the other way.

Narrowest full spreads are all aggregates, as always, even on a five-person board that widens every spread: Overall Combat Value (**1.0**), Overall Combat Power (1.1), Overall Value (2.4) and Overall Power (2.7). Treat all four as clusters.

Widest full spreads, and Lock-Step is the low end of all ten:

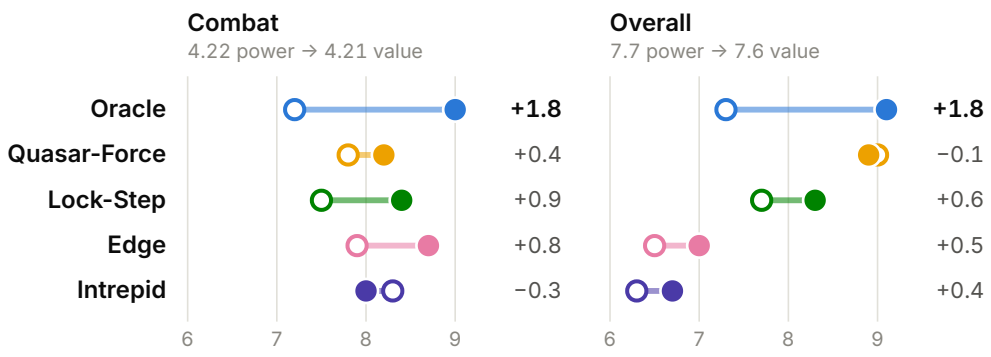

- **JL Vetting — Character: 17.0.** Oracle **+8.5** against Lock-Step **−8.5**; still the widest spread in the document's history.
- **Discipline Outside Combat: 15.0** and **Iron-Side: 15.0.**
- **Batman: 14.5.**
- **Emotional Regulation: 14.0.**
- **Nightwing: 13.5** (14.0) and **Justice League: 13.5.**
- **Trauma Resilience, Safety Net and Line-Holding: 13.0 each** (13.5 *each*).

Character is still where this team's real variance lives, and this revision it narrowed rather than widened. Four of the ten closed by half a point, all at Lock-Step's end, and none widened.

10.1.5 Value vs Power — the Central Inversion

	Combat Power	Combat Value	Overall Power	Overall Value
Oracle	5th 7.2	**1st** 9.0	3rd 7.3	**1st** 9.1
Quasar-Force	3rd 7.8	4th 8.2	**1st** 9.0	2nd 8.9
Lock-Step	4th 7.5	3rd 8.4	2nd 7.7	3rd 8.3
Edge	2nd 7.9	2nd 8.7	4th 6.5	4th 7.0
Intrepid	**1st** 8.3	5th 8.0	5th 6.3	5th 6.7

Value against power

Hollow marker: the power axis (4.22, 7.7). Filled marker: the value axis (4.21, 7.6). The figure at right is value minus power.

Oracle gains 1.8 points moving from combat power to combat value, and 1.8 moving from overall power to overall value — up from 1.6 and 1.7. The team's most valuable member is still its least powerful in combat, and on a five-person board he is now last on combat power.

The inversion at the top reopened. Last revision Quasar-Force's value was within a tenth of his power and of Oracle's value. Oracle's Overall Value lead is now two tenths, and Quasar-Force has fallen to fourth on Combat Value — the brood planned around him, and he spent half the fight below zero.

Edge is second on both combat columns and fourth on both overall columns — the only member whose combat power and combat value agree, and a specialist's profile in every other respect. **Intrepid is first on combat power and last on everything else**, as he was last revision. Lock-Step gains in both columns moving from power to value, which is still what an all-rounder's profile looks like.

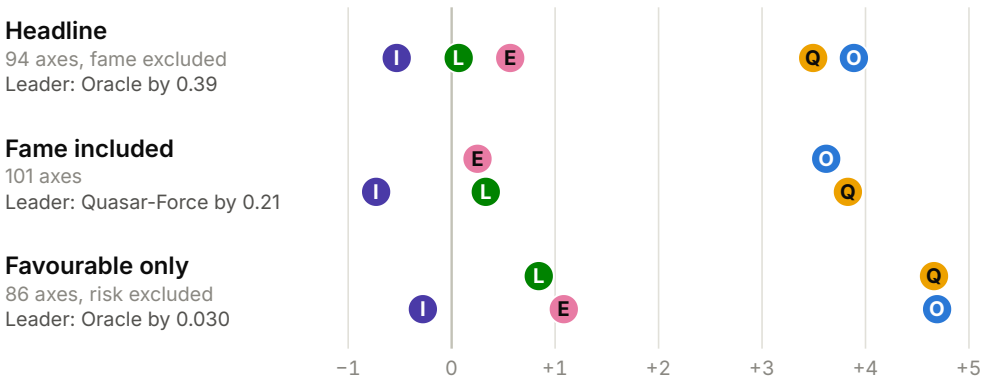

10.1.6 Sensitivity

Including the seven fame axes keeps the flip for a second revision. Across 101 axes, with exposure treated as favourable, the composites read **Quasar-Force +3.83, Oracle +3.62**, Lock-Step +0.33, Edge +0.25, Intrepid −0.73. **Quasar-Force leads by 0.21**, down from 0.25. Fame is worth +0.34 to Quasar-Force, +0.27 to Lock-Step, −0.20 to Intrepid, −0.27 to Oracle and −0.32 to Edge, which is enough to drop the newcomer below Lock-Step on this treatment.

Rescaling to `0–10` via `(x+10)/2` on the fame-inclusive composite preserves the order: Quasar-Force **6.91**, Oracle **6.81**, Lock-Step **5.17**, Edge **5.12**, Intrepid **4.64**.

Excluding the risk section as well — the 86 favourable axes only — puts Oracle back in front: +4.692 to +4.662. Last revision Quasar-Force led this treatment by nine thousandths; Oracle now leads it by thirty. **Edge is third here (+1.084)**, ahead of Lock-Step (+0.842), because this is the treatment in which Lock-Step's risk load does not count and Edge's absence of deep negatives does.

The composite under three treatments

Each row recomputes the composite on a different set of axes (10.1.2, 10.1.6). Members who are within a dot's width of each other are stacked.

Section-weighted treatment gives each section equal weight instead of each axis. Over the eight non-fame sections Oracle leads, +3.50 to +2.73, with Edge third at +0.50. With fame included Quasar-Force leads, +3.35 to +3.11. **The weighting scheme still decides the answer.**

Fight sensitivity. Session 16 was the first fight since Session 14, so the question is how much of the movement the fight itself produced. Revert all twenty-two combat axes to their Session 15 values and the composites read Oracle +3.867, Quasar-Force +3.491, Lock-Step +0.047 and Intrepid −0.531. **The fight's combat scores were worth +0.021 each to Oracle and Lock-Step, +0.003 to Quasar-Force, and exactly nothing to Intrepid**, whose four combat movements cancelled. Most of Session 16's movement came from what the fight showed about character and standing, not from the combat axes.

One-session sensitivity. Session 16 moved **59 axes across the returning four, against 183 last revision**:

- **Oracle** 13 (10 better, 2 worse, 1 fame), net **+0.048**.
- **Quasar-Force** 9 (5 better, 3 worse, 1 fame), net **+0.012**.
- **Lock-Step** 24 (16 better, 8 worse), net **+0.045**.
- **Intrepid** 13 (6 better, 7 worse), net **−0.011**.

Strip every Session-16-derived change and the composites revert exactly to last pass. **No single character's session reshaped his profile or the standings this time**; the revision's largest change is an arrival.

Roster sensitivity. Edge changes no returning member's score-based figure. On position-based figures he takes **one first place** (Ranged, from Oracle) and **sixteen last places**: twelve favourable lasts (eight from Intrepid, two each from Oracle and Lock-Step) and four fame lasts from Intrepid. Seven of the sixteen are tie-breaks. Section 10.2 reports the like-for-like comparison alongside the five-person board, so none of that movement is reported as performance.

10.2 Aggregate Standing — Position-Based

*Five-person board: positions run 1–5. Where a returning member has a second figure, it is the **like-for-like comparison** — Session 16 scores with Edge removed and positions re-counted, on a four-person board — followed in parentheses by the published Session 15 figure.*

10.2.1 Axis Polarity Classification

Class	First place means	Axes	Which
Favorable	Best — more of a desirable quality	**86**	§1 (14), §3 (9), §4 (22), §5 (17), §6 (6), §7 (7), §9 (11)
Risk	Worst — most exposed to a threat	**8**	§2.1–2.8
Neutral / double-edged	Most exposure; benefit is context-dependent	**7**	§8.1–8.7 (Fame)
Total		**101**	

10.2.2 Favorable Axes (86) — *lower average is better*

PC	1sts	5ths	Average	Like-for-like: 1sts / 4ths / average *(S15)*
Oracle	**37**	5	**2.10**	38 / 7 / **1.90** *(38 / 7 / 1.92)*
Quasar-Force	27	7	2.33	27 / 7 / 2.03 *(27 / 7 / 2.01)*
Lock-Step	13	28	3.30	13 / 30 / 2.85 *(13 / 30 / 2.86)*
Edge	1	12	3.49	—
Intrepid	8	**34**	3.78	8 / 42 / 3.22 *(8 / 42 / 3.21)*

Like-for-like, the returning four barely moved: eight favourable position changes in all, and not one first or last place changed hands. Oracle took back two of the second places he lost in Session 15, on Influence and Internal Emergence, both from Quasar-Force. Quasar-Force also lost second on Combat Value to Lock-Step and took second on Countermeasure Resilience from Intrepid. **Oracle's lead on this measure widened from 0.09 to 0.13 like-for-like** — the first widening in three revisions.

On the five-person board Edge takes one first — Ranged, from Oracle — and twelve lasts, eight of them from Intrepid. His average of 3.49 puts him fourth, between Lock-Step and Intrepid.

10.2.3 Risk Axes (8) — *higher average is better*

PC	1sts *(most at risk)*	5ths *(least)*	Average
Intrepid	0	**6**	**4.62**
Oracle	0	2	3.50
Edge	0	0	3.50
Lock-Step	2	0	2.00
Quasar-Force	**6**	0	**1.38**

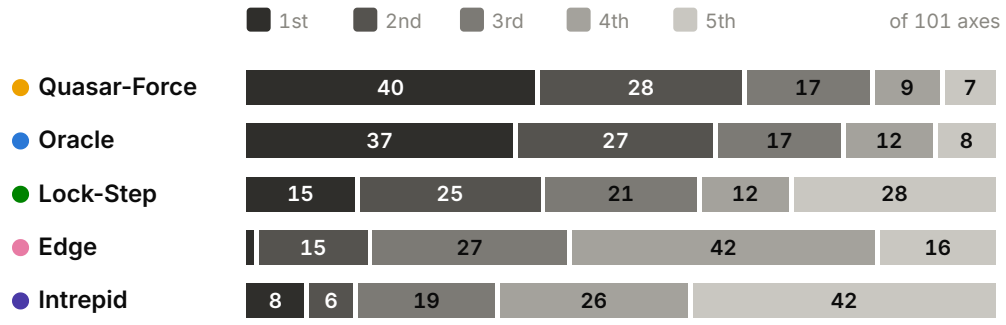

Like-for-like, no risk position changed among the returning four for the second time in three revisions. Quasar-Force holds six risk firsts — hostile organisations, Waller's strategic interest, legal action, personal leverage, hostage value and compromise severity — and Lock-Step the other two, subversion and Squad value. **The two of them hold every first place on the risk board between them for a third revision.** Edge enters **never most exposed and never least**: second on Squad value, third on leverage and severity, fourth on the other five.

10.2.4 All 101 Axes — Raw Position

PC	1sts	5ths	Average	1	2	3	4	5	SD
Quasar-Force	**40**	7	**2.16**	40	28	17	9	7	1.23
Oracle	37	8	2.28	37	27	17	12	8	1.28
Lock-Step	15	28	3.13	15	25	21	12	28	1.43
Edge	1	16	3.56	1	15	27	42	16	**0.96**
Intrepid	8	**42**	3.87	8	6	19	26	42	1.24

Like-for-like four-person distributions, Session 16 (Session 15): Quasar-Force 40 / 38 / 16 / 7 (40 / 40 / 14 / 7), average 1.90 (1.88); Oracle 38 / 30 / 23 / 10 (38 / 28 / 25 / 10), average 2.05 (2.07); Lock-Step 15 / 26 / 30 / 30 (15 / 25 / 31 / 30), average 2.74 (2.75); Intrepid 8 / 7 / 32 / 54 (8 / 8 / 31 / 54), average 3.31 (3.30).

Raw position, all 101 axes

Five-person board (10.2.4). On the §2 risk axes first place means most exposed, and on the §8 fame axes most known.

Quasar-Force places top-two on 68 of 101 axes on the five-person board; like-for-like it is 78, down from 80, because he lost three second places (two to Oracle, one to Lock-Step) and gained one. **Edge's distribution is the tightest on the board (SD 0.96)**: one first, sixteen lasts, and 84 placements in the middle three, half of them fourth. **Intrepid is last on 42 of 101**, down from 54, entirely because a fifth member arrived below him on twelve axes. Six of the forty-two are risk axes and are good news.

10.2.5 Placement Tally (94 non-neutral axes)

PC	Good 1sts	Good 5ths	Bad 1sts	Bad 5ths	Net	Like-for-like *(S15)*
Oracle	37	5	0	2	**+34**	+33 *(+33)*
Quasar-Force	27	7	6	0	**+14**	+14 *(+14)*
Edge	1	12	0	0	**−11**	—
Lock-Step	13	28	2	0	**−17**	−19 *(−19)*
Intrepid	8	34	0	6	**−20**	−28 *(−28)*

Like-for-like, not one tally moved. The five-person figures differ only because the newcomer took last places that used to be Lock-Step's, Oracle's and, above all, Intrepid's. On this measure Oracle is twenty clear.

10.2.6 Polarity-Adjusted Position Composite

The same 94 non-neutral axes as 10.1.2, risk inverted. Five-person board: 5 = best placement. Like-for-like: 4 = best.

PC	Mean	Median	SD	Like-for-like mean *(S15)*
Oracle	**3.86**	4.0	1.23	**3.10** *(3.07)*
Quasar-Force	3.48	4.0	1.37	2.82 *(2.84)*
Lock-Step	2.64	3.0	1.43	2.14 *(2.13)*
Edge	2.60	2.5	**0.98**	—
Intrepid	2.43	2.0	1.42	1.95 *(1.96)*

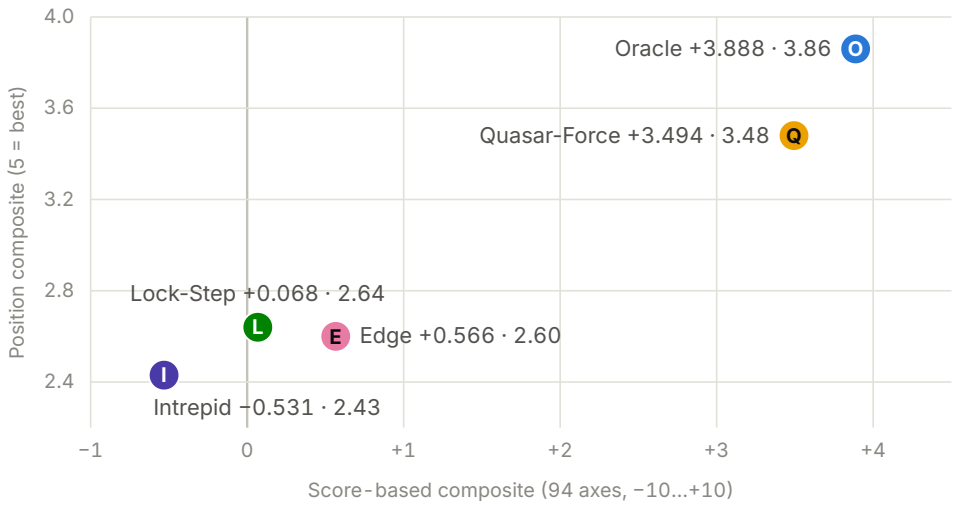

Oracle leads by 0.38 on the five-person board, and by 0.28 like-for-like, against 0.23 last revision. On positions as on scores, the lead widened. **Third place on this measure is Lock-Step's, by four hundredths over Edge** — the opposite of the score-based composite, where Edge leads Lock-Step by half a point (10.2.7).

10.2.7 Method Comparison

Both composites run on the same axes. Matched:

	Score-based	Position-based	Agree?
Excluding fame (94)	**Oracle** +3.888, Quasar-Force +3.494 *(0.39)*	**Oracle** 3.86, Quasar-Force 3.48 *(0.38)*	**Yes**
Including fame (101)	**Quasar-Force** +3.830, Oracle +3.617 *(0.21)*	**Oracle** 3.80, Quasar-Force 3.58 *(0.22)*	**No — second consecutive revision**
Third place (94)	**Edge** +0.566, Lock-Step +0.068 *(0.50)*	**Lock-Step** 2.64, Edge 2.60 *(0.04)*	**No — first time**
Raw first-place count (101)	—	**Quasar-Force** 40, Oracle 37	**No — third consecutive revision**

Score-based against position-based composite

Both measures use the 94 non-neutral axes (10.1.2, 10.2.6). The score composite puts Edge third; the position composite puts Lock-Step third.

The flip held. Last revision's closing note asked whether Quasar-Force's fame-inclusive lead would survive; it did, at 0.21, so the score-based and position-based fame-inclusive treatments disagree for a second revision, and the raw first-place count has now disagreed with the headline composite for three.

The re-examination, updated. Last revision split the composite into its native parts and found the two leaders tied to nine thousandths on everything they bring. Session 16:

Component	Axes	Oracle	Quasar-Force	Leader
Capability (magnitude, §3.6–§7)	56	+3.54	**+4.35**	Quasar-Force by 0.81 *(0.87)*
Character, standing & reputation (valence)	30	**+6.85**	+5.25	Oracle by 1.60 *(1.60)*
All favourable axes (the two above)	**86**	**+4.692**	+4.662	**Oracle by 0.030** *(Quasar-Force by 0.009)*
Risk (§2)	8	**−4.75**	−9.06	Oracle by 4.31 *(4.31)*

On what they bring, Oracle is back in front by three hundredths, on a session in which he carried the fight and Quasar-Force spent half of it below zero. Quasar-Force's capability margin shrank by six hundredths; the character margin did not move. **On what threatens them, nothing changed at all:** 0.367 of Oracle's 0.394 composite lead is still the risk section, and 0.028 is everything else. Closing the lead through risk alone would now need Quasar-Force's risk mean to improve from −9.06 to about −4.4.

The finding stands as relabelled last revision: "Oracle first" on the headline composite means "Oracle safer" far more than "Oracle better." Session 16 adds a qualification in his favour — he is now slightly better as well — and it is thirty thousandths wide.

Why third place disagrees. Lock-Step has fifteen first places and twenty-eight last places; Edge has one and sixteen. **Lock-Step's negatives are deep** — Character −3.21, Reputation −1.95, Risk −8.25 — **and Edge's are shallow.** A score composite punishes depth; a position composite counts only order. Neither is wrong. **Edge is the better-rounded member, and Lock-Step the more decisive one.**

Why fame stays excluded, now that it decides the answer. Exposure has no fixed sign: it opens doors and it paints targets. **Session 16 supplies the clearest case yet.** The brood said, in the fight, that it ganged up on Quasar-Force first because of his fame, his known fragility and his grappling (§8.6, §2.2). The only treatment in this document that puts Quasar-Force first is still the one that scores a spotlight as an asset, and **Session 16 is the session in which the spotlight drew fire.**

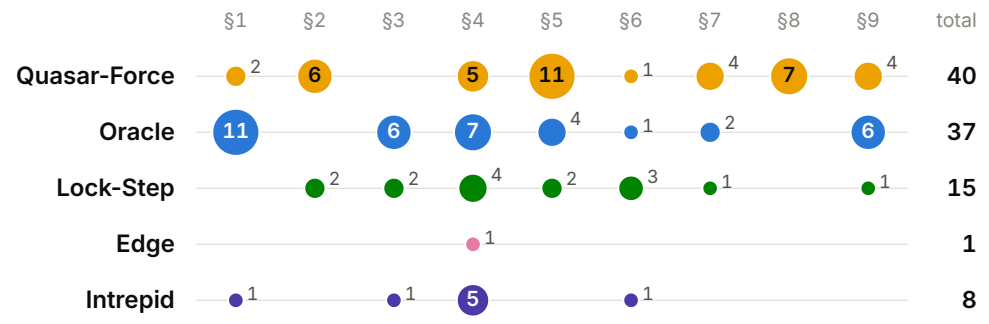

10.3 The Sweeps

Where each character's first and last places actually cluster. Position convention follows each section: on §2 first place means ***most*** *at risk.*

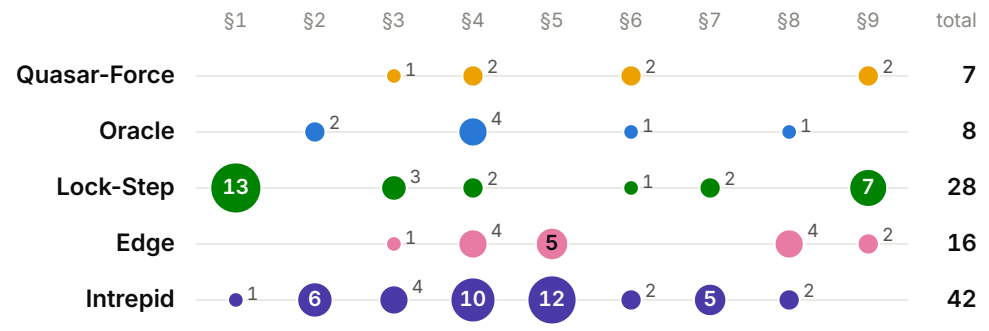

PC	Firsts	Where they are	5ths	Where they are
Quasar-Force	**40**	§5:11, §8:7, §2:6, §4:5, §7:4, §9:4, §1:2, §6:1	7	§4:2, §6:2, §9:2, §3:1
Oracle	37	§1:11, §4:7, §3:6, §9:6, §5:4, §7:2, §6:1	8	§4:4, §2:2, §6:1, §8:1
Lock-Step	15	§4:4, §6:3, §2:2, §3:2, §5:2, §7:1, §9:1	28	§1:13, §9:7, §3:3, §4:2, §7:2, §6:1
Edge	1	§4:1	16	§5:5, §4:4, §8:4, §9:2, §3:1
Intrepid	8	§4:5, §1:1, §3:1, §6:1	**42**	§5:12, §4:10, §2:6, §7:5, §3:4, §6:2, §8:2, §1:1

Where the first and last places fall

First places, by section

Last places, by section

Bubble area is proportional to the count (10.3). On §2, first place means most at risk; on §8, most exposed.

Oracle sweeps character. He holds eleven of the fourteen psychology axes, six of nine team internals and six of eleven reputation axes: **23 of the 34 axes that measure who a person is rather than what they can do**, unchanged. His combat last places fell from six to four — Grappling, Personal Mobility, Single-Target and Combat Power — because the newcomer sits below him on Crowd Control and Area Damage. **He is still the best person on this team and the worst at hurting anybody.** He lost one first, Ranged, to the newcomer.

Quasar-Force sweeps capability, exposure and most of the danger, and his lists did not change. Forty firsts — eleven of the seventeen non-combat axes, all seven fame axes, five combat axes, four of seven overall axes and six of eight risk axes — and the same seven last places as last revision: Physical Durability, Healing, Power Independence, Solo Operation, Support Burden, and the two public reputations. **Five of those seven are still the same fact — a sixty-Health fourteen-year-old carrying an irreplaceable object with no way to heal — and the other two are the death.** Session 16 tested the first fact twice in one fight.

Lock-Step is the mirror image, and Session 16 shortened only the image's edges. His fifteen firsts are the same fifteen as last revision. His last places fell from thirty to twenty-eight, both because the newcomer arrived below him (Trust and Green Lantern Corps reputation), **and all thirteen psychology last places are unchanged**: Edge's §1 scores sit above his on every one of them. The only psychology axis he is not last on is still Moral Agency.

Edge's distribution is the narrowest a debut can produce. One first, Ranged. Sixteen lasts, of which **seven are tie-breaks** (Team Mobility and Area Damage under the newcomer convention; Engineering, Cyber, Lab, Law and Medical on Logic) and **four are fame axes**, where last means least exposed. **Only five are last places on substance**: Trust, Crowd Control, Rescue, and two reputations he has not had time to earn.

Intrepid's distribution is still the most extreme on the board. Eight firsts — five in combat, plus Civilian Stability, Support Burden and Power Independence — against forty-two last places, **down from fifty-four only because a fifth member arrived below him on twelve axes.** He is last on twelve of the seventeen non-combat axes. NOTE Six of the forty-two are risk axes and are good: he is the least subvertible, least targeted and least leveraged person on the roster.

10.4 Structural Findings

Team-level conclusions that fall out of the axis data rather than from any single character. Findings are carried forward with their revision history; thirteen moved this pass, four are carried, two are new, and two stay archived or superseded.

1 **The leadership vacuum became a division of labour.** MOVED Iron-Side still declines to appoint a leader. Nightwing was off screen for a third session but acted: operating as Batman, he recruited and briefed the newcomer. Wonder Woman remains the external authority in practice; the team briefed her after the fight. NOTE The user's reading that she is becoming the team's mentor is still not GM-declared. **Inside the team, the chair Lock-Step filled in Session 15 was set down in Session 16, in front of the newcomer**: "*Oracle is our plan guy. I'm just the if it all goes to hell… that's my element.*" Oracle supplied the plan after saying there wasn't one, Edge supplied the target, the module ratified it, and in the crisis Lock-Step ran the exit with a consent question. **Planning to Oracle, the crisis to Lock-Step, intelligence to Quasar-Force and the first target to the newest member** — a structure nobody appointed and everybody followed. (*Standing since Session 3; externally re-anchored Session 14; internally filled Session 15; divided Session 16.*)

2 **The tower's perimeter is half-closed, and the threat lives in its basement.** CARRIED The teleport half is done and was not tested. The anti-phasing half is not recorded as built; the fight that featured a phaser happened at a warehouse, and the hand-waved ending credits Lock-Step's Force whip, not the building, with deterring her. **One gap may be smaller than it looked:** the drones' infrared, blind to the Session 14 thieves, found the brood in Session 16. The hostile progenitor is still in STAR Labs custody on the lower floors of the tower's own skyscraper, and Doctor Taleria's cut-off sentence about "*the other signal that's happening at your—*" is still unfollowed. (*Standing since Session 10; half-closed and relocated Session 15; carried Session 16.*)

3 **Quasar-Force is still a single point of failure removable in one action; the edges held and the centre did not.** MOVED **The edge held:** the circlet's fortification turned away Swipe, the one attack in the fight built to take a power. **The centre did not:** a Marvel and a reaction strike put him at −5 through his damage reduction in the opening exchange, and a glitch bomb that ignores damage reduction put him at −30. **And the enemy now has a doctrine for him** — fame, known fragility, grappling — which it explained out loud. RULING Telekinetic Protection is closed by the house rule while the suit carries Sturdy 3. **Energy Absorption converts Health damage *after* damage reduction into Focus, which makes it the one purchase on the board that answers both of Session 16's knockdowns.** MECHANICAL FLAG The circlet is *Worn*, and it stayed on. (*Standing since Session 4; first mitigation Session 15; edges tested and held Session 16.*)

4 **Threats inside the trust perimeter: one masked, one partly answered, one new unknown.** MOVED

- **Left.** OOC Exemplar I is outside the perimeter with detailed knowledge of the team.
- **Masked.** Azimuth, for as long as the circlet stays on. It stayed on through a fight.
- **Resurfaced, and partly answered.** The warehouse where Lock-Step's time device was found and used as a lure was holding a second device keyed to his time manipulation, and the brood came for it. **Edge destroyed it.** Who built it, and for whom, is still unknown.
- **STAR Labs' CFO** and **the Destined**: no Session 16 development; the Destined's errand is unresolved (finding 18).
- **New, and not a threat: an unexamined legend.** The newcomer lives in bedroom 3 and carries a backstory nobody on the team has asked about — a monster reborn that "*cut down armies*" — and a mentor tag that may not mean what it says. VOLATILE

(*Standing since Session 8; rewritten Session 15; partly answered Session 16.*)

5 **Oracle has been counter-built, and the brood found a third way.** MOVED The Session 14 grab-and-drain was not used, so it is still untested whether his sheet answers it. **Session 16 added a third counter**: Dragonborne spent a reaction to turn Oracle's Return Fire onto Lock-Step. He was knocked down by 72 physical damage and got up on his own healing factor. **Two Rank 3.5 advances have now been undeclared for three sessions.** Any mental power that projects strength breaks the grab under the house rule; Uncanny raises the soft door. (*New Session 14; untested Session 15; third counter Session 16.*)

6 **Cost runs opposite to capability, and the newcomer is cheap, not free.** MOVED **The cheapest member cost an extraction**: Intrepid fell from +7.0 to +6.5 when Lock-Step went back for him on the last of his Focus. Quasar-Force's bill rose (−2.0 → −2.5) on two knockdowns that the hardware did not prevent and the medic spent half the fight on. **Edge enters second at +6.0** — self-healing, self-armed, trained at someone else's expense, but housed by the team and fifteen. (*Standing since Session 9; anchor removed Session 15; half-restored Session 16.*)

7 **Robustness runs opposite to power, and the gap widened again.** MOVED The section spread on the composite scale went 1.17 → **1.27**, after compressing for the first time last revision. **The member at the bottom fell**: Intrepid lost a power to a thief and was beaten by something other than damage for a fourth straight session. Lock-Step, still at the top, gave back a little on one roll outside the warehouse. **The newcomer enters second, ahead of Oracle**, so the member with the second most robust profile is also the one with the least record. (*Standing since Session 11; first narrowing Session 15; widened Session 16.*)

8 **One healer, tested at full load; the backup still untested.** MOVED **Session 16 is the session this finding was written for.** Every member went to zero or below, and every recovery in the fight went through Oracle: Let's Go on Quasar-Force, then on Lock-Step, and the heals that sent everyone home. **The worst case arrived for one round**: with Oracle down at −2, nobody healed anybody until his own healing factor got him up. Lock-Step's hex-heal was not used, because every point of his Focus went into teleports. **The finding is confirmed in its strongest form short of the failure itself**: the team has no recovery mechanism during a fight if Oracle is neutralised, and in Session 16 the brood neutralised him for a round with physical damage. Edge brings a second healing factor, not a second healer. (*Standing since Session 7; tested at full load Session 16.*)

9 **Legal exposure is concentrated in two members, and the second is still accumulating.** MOVED Quasar-Force remains *the* case (−9.5). **Lock-Step moved to −8.5**: one of the five teenagers he publicly accused of reoffending in Session 15 is now unconscious, in his handcuffs, in a crime syndicate's warehouse. The conduct was defensible — surrender offered first, non-lethal force — and the exposure is the paperwork. If the Destined act on his Session 15 request, the solicitation sits beside it. (*Standing since Session 8; broadened Session 14; concentrated Session 15; accumulating Session 16.*)

10 **The best pairings on this team: one declared by the GM, one formed in an afternoon.** MOVED The Oracle–Lock-Step resonance from Session 15 was not used. **Two new working pairings appeared in the newcomer's first fight.** Edge and Intrepid: two aids, one turning a Marvel miss into the hit that stunned Blood Blade and gave Intrepid his Sturdy back. Edge and Oracle: Edge's 31 Focus left Dragonborne at 11, and Oracle's 15 demoralised him. **And the newcomer's first shot was aided by all four teammates at once.** The telekinetic nudge remains undeclared doctrine, and the pre-mission questionnaire is still unwritten — but "*Do we have a plan?*" was asked before the door opened, by the member who had been on the team for minutes. (*Standing since Session 6; half-closed Session 15; extended Session 16.*)

11 **"The powers were never the problem" — resolved in the affirmative.** CLOSED, ARCHIVED The finding was about Exemplar II's sheet; §11 carries the record. (*Opened Session 9; closed Session 14; archived Session 15.*)

12 **Research institutions hold this team's biology, and one of them is a suspect.** CARRIED STAR Labs built Oracle's body, wants Quasar-Force in a laboratory, holds the Breeder in custody, and its CFO signed out the car that took five teenagers into its garage. Doctor Taleria's consensual research relationship with Quasar-Force and Iron-Side's unexplained medical training are unchanged. **The five teenagers carrying the Breeder's brood are now three unconscious in a warehouse and two at large**, and the log records no screening of any of them. (*Standing since Session 12; STAR Labs converted from custodian to suspect Session 15; carried Session 16.*)

13 **The Justice League has gone from client to host to backstop to debrief.** MOVED The League took no part in Session 16. The team went home and briefed Wonder Woman, and the log records neither who spoke nor what she said. FLAG Her Session 14 disclosure commitment was made to Exemplar II, and whether it binds the current roster is still untested. **The newcomer gives the League-adjacent world a second line into this team**: Black Canary, who trains him. (*Standing since Session 12; converted Sessions 14 and 15; debrief Session 16.*)

14 **Two Justice League civilian identities spoken aloud in a compromised building.** SUPERSEDED BY 16 No civilian identity was spoken in Session 16. (*New Session 14; superseded Session 15.*)

15 **The team has no answer to area denial or obscurement — and now, on paper, it has one.** ANSWERED ON PAPER **Edge carries Heightened Senses 2**, the power that let Exemplar II see through the Vapors of Galator and track an invisible assassin in Session 14. Nothing tested it in Session 16. **Area denial is still unanswered**: Intrepid's stomp is still the team's only area attack, and nothing on any sheet addresses an obscurement field except the newcomer's senses. The opponents who used those tools are still at large, bar Ecliptica. (*New Session 14; worse by departure Session 15; answered on paper Session 16.*)

16 **The team is publishing itself — and an enemy has read it.** MOVED Nothing was published in Session 16. **What changed is that the exposure was used.** The brood told the team in the fight that it ganged up on Quasar-Force first because of his fame, his known fragility and his preference for grappling, and Dragonborne arrived ready to answer Oracle's Return Fire. **For one revision this finding was about the team producing exposure; Session 16 is the first time an enemy is recorded spending it.** (*New Session 15; first priced Session 16.*)

17 **A second cosmic institution has a claim on a Titan, and it works in time — and somebody on Earth has a use for the same powers.** CARRIED, WITH A NEW DATUM The ring and the oath did not come up. **But a Marrow Syndicate warehouse was trafficking a device keyed to Lock-Step's time manipulation**, the brood was sent to retrieve it, and Edge destroyed it. RULING Time Powers are on the GM's banned list, and whatever the device did will arrive as plot. (*New Session 15*; *carried Session 16.*)

18 **The team has contracted a villain team for lethal work, and it is still unresolved.** CARRIED The Destined have not reported back. The errand came up twice in passing — Quasar-Force's "*We sent the murder hobos after the bad progenitor*" and Lock-Step's "*The other situation, is that other team's problem*" — and **nobody objected, Oracle included**. His one line on the subject came out garbled ("*hopefully, die, harming them?, dissuade them?*"), and it was Lock-Step who insisted on knock-outs for the five. The Session 15 watch item on Oracle's silence is carried, unresolved. (*New Session 15*; *unresolved Session 16.*)

19 **The roster is five again, and the newcomer filled the vacancy's edges, not its centre.** MOVED Of the six things §11.3 said the replacement would most usefully bring, Edge brought one on paper (an answer to obscurement), two in part (field investigation by senses rather than method; robustness, second on the index) and three not at all (a second healer, adult or professional standing, a second area attack or real crowd control). **He also brought things the vacancy did not describe**: the best ranged attack on the team, a second Suppressive Fire line at ×7, the team's only dodge reaction, the objective-denial shot, and the second-highest social ability score. §11.3 has the detail. (*New Session 15*; *partly filled Session 16.*)

20 **The hive wants the team.** NEW Mid-fight, the controller's orders changed. Blitzkrieg: "*my master's orders has changed to collecting you since you proved yourselves worthy*," and a round later, "*we need to collect these specimens*." The hand-waved ending says she could not carry out Intrepid or Edge, and that she withdrew under orders because Intrepid weighs over 300 pounds and Lock-Step's Force whip can hit her while she is phased. **A hostile force has now said, in the middle of a fight, that it wants the Titans themselves** — not their data, their devices or their deaths. The interest is not new: Doctor Varga wants Quasar-Force in a laboratory, and the Prodigy breeder once called this team *excellent progeny*. **What is new is that it arrived as orders, to a team already in the room with them.** Two members of the brood escaped, and both have now seen what each Titan does in a fight. (*New Session 16.*)

21 **The first fight in which every member went down, against the people the team was there to bring back.** NEW All five Titans reached zero Health or below, the healer was down for a round, and the team left the building one teleport at a time on the last of Lock-Step's Focus. **The team won the objective and lost the field.** The device was destroyed, but the five were left as they were found: three unconscious in a mob warehouse, one in handcuffs, and two at large, none secured, screened or cured, with the 24-hour clock from Session 15 unresolved in the log. **The rule the team fought by — *"we can bring them back, so knock them out"* — was the right one**, and Session 16 is the first time it was tested on people the team could not afford to leave behind, and did. (*New Session 16.*)

§11 Departed — Exemplar II (Archive and Vacancy Analysis)

Exemplar II's player left the campaign between Sessions 14 and 15. In the fiction he was left out of the Grey Lantern's transport; on Day 46 he "returns to earth, with only a quick goodbye to the team," and from Day 53 he "is not present" at the tower. The roster lists him under Departed PCs. ***He is not ranked in this revision.*** *His replacement, Edge, arrived in Session 16 and is scored throughout. This section keeps Exemplar II's final standing as the document last measured it and, for the first time, measures the replacement against the vacancy.*

11.1 Final Standing (frozen at Session 14)

Measure	Figure	Place (of five)
Composite (94 axes)	**+1.49**	3rd
Median / SD / range	+2.5 / 4.04 / −8.0 → +8.5	—
Fame-inclusive composite / 0–10 rescale	+1.64 / 5.82	3rd
Combat / Non-Combat / Robustness / All-Capability	4.71 / 6.49 / **6.25** / 5.70	5th / 3rd / **1st** / 4th
Character / Team Standing / Reputation / Combined	+3.89 / +5.18 / +3.23 / +3.86	3rd / 2nd / 3rd / 3rd
Risk Load	−6.06	3rd most exposed
Raw position (101 axes)	6 firsts, 15 lasts, average 3.21	—
Polarity-adjusted position composite	2.71 (median 3.0)	3rd

His six first places: Civilian Life Stability (**+7.0**), Low Operational Support Burden (**+8.5**), Field Investigation (**8.8**), Law (**7.0**), Function Without Powers (**8.0**), and Law-Enforcement Reputation (**+6.0**). Four of the six were versions of one fact: **he was the only adult with a job.**

His final sheet. He had 150 Health, 90 Focus, H-DR 2 and F-DR 2. His abilities were Melee 7, Agility 0, Resilience 5, Vigilance 3, Ego −2 and Logic 6, and his defences 19/19/17/15/18/18. He carried two Iconic Items, both flawed *Custom Built Parts for the Exemplar II Project* and *Human (David's DNA) use only*:

- **AI Cybernetic Implants & Sensory Bionics:** AllSpeak, Heightened Senses 2, Microscopic Awareness, Uncanny 2.
- **Torso Cybernetic Implantation:** Mighty 3, Speed Run 1, Venom Bash, Venom Burst.

The roster's Rank 3→4 plan ends at its fourth line: "*{Player left the game}*."

His arc in this document. He joined in Session 3 and went through four sheets in eight sessions. For three revisions this document described a generalist who bought capability and never used it. **His last session on the team was the best any character had had in the campaign**, and he played it on the sheet he already had:

- **Azimuth.** He saw the astral figure nobody else could, sketched it, and put a name on a New God missing for thousands of years.
- **Ecliptica.** He found the drone footage that identified her.
- **The casualty.** He moved the unconscious Quasar-Force out from under the figure.
- **Wonder Woman.** He told a founding member of the Justice League that she had failed a team of minors, and got "*Consider me admonished*" and a disclosure commitment in return.

Session 14 moved him on sixty-one axes, the record until Lock-Step's seventy-two in Session 15. OOC The clone subplot — a father who intends to overwrite him — is unresolved. So is the one instrument that would have answered it for him: Microscopic Awareness, never once demonstrated on screen.

11.2 The Vacancy, Axis by Axis

What the team had in him at Session 14, who covered it after he left, and who covers it now that Edge has arrived.

Capability	Exemplar II (S14)	Best remaining (S15)	Covered now (S16)	What the arrival changed
Field Investigation §5.4	**8.8** (1st)	Quasar-Force 7.5	Quasar-Force 7.5	Little. Edge (5.0) brings Heightened Senses 2's lie-detection and range, with Logic −1 and no record.
Sensory Awareness §5.9 / counter-stealth	8.0 (2nd)	Oracle 9.0, Quasar-Force 7.0	Oracle 9.0, **Edge 8.0**	**The senses are back.** Edge carries the same Heightened Senses 2, at the same score. Untested.
Law §5.6	**7.0** (1st)	Quasar-Force 5.0	Quasar-Force 5.0	Nothing. Edge is fifteen (1.0).
Alliance Capital §5.15	9.0 (2nd)	Lock-Step 7.2	Lock-Step 7.2	A new line, not a replacement: Edge (6.0) brings Black Canary, the Birds of Prey and Nightwing's personal recruitment.
Engineering / Lab / Cyber §5.2–5.5	7.0 / 7.5 / 5.0 (2nd on all three)	Oracle 4.5 / 7.0 / 4.5	Oracle 4.5 / 7.0 / 4.5	Nothing. Edge has Logic −1 (0.5 on all three).
Low Support Burden §3.5	**+8.5** (1st)	Intrepid +7.0	Intrepid +6.5, **Edge +6.0**	A cheap member, not a net contributor: self-healing and self-armed, housed by the team.
Civilian Stability §1.7	**+7.0** (1st)	Intrepid +6.0	Intrepid +6.0	Nothing. Edge's civilian life (+1.5) carries the headaches, the grades and the legend.
Function Without Powers §6.2	**8.0** (1st)	Lock-Step 7.5	Lock-Step 7.5	Some. Edge (4.5) has Agility 7 and Black Canary's training underneath the powers.
Robustness index §6	**6.25** (1st)	Lock-Step 5.38	Lock-Step 5.30, **Edge 5.12**	Partly. Edge enters second on the index.
Area Damage §4.11	5.0 (2nd)	Lock-Step 3.0	Lock-Step 3.0	Nothing. Edge is single-target only (0.5). Intrepid's stomp is still the only area attack.
Physical Durability §4.1	7.8 (2nd)	Oracle 6.5	**Edge 6.2**	Partly. A second healing factor and a dodge, on 90 Health rather than 150.
Law-Enforcement Reputation §9.3	**+6.0** (1st)	Oracle +5.5	Oracle +5.5	Nothing. Edge (+1.0) is unknown to the police.

What left that the team is better off without is unchanged: his OPSEC record (§1.6 **−1.0** at Session 14), whose exposure did not leave with him, and his risk load, including a patron who was also his adversary.

11.3 What the Replacement Actually Brought

Last revision ranked six vacancies by how much each one cost the four who remained, and said the replacement would be scored on arrival against that list. Session 16 is the arrival.

1. **An answer to obscurement and invisibility** (finding 15). **Yes, on paper.** Heightened Senses 2 is the power that saw through the Vapors of Galator and tracked an invisible assassin in Session 14. Nothing in Session 16 tested it, and the opponents who exploit obscurement are still at large.
2. **A second healer** (finding 8). **No.** He brings a second healing factor, which heals only him. The single-healer finding was tested at full load in Session 16 and confirmed.
3. **Field investigation in person. Partly.** The instrument is excellent — quadruple range, a double edge to perceive, and a heartbeat lie-detector — and the operator has Logic −1 and no record. He did arrive already briefed by Nightwing.
4. **Adult or professional standing** — law, contracts and police relations. **No.** He is fifteen, with a School obligation. His mentor is an adult professional, which is a connection rather than standing.
5. **Robustness**: a member who functions when powers, preparation or support are removed. **Partly.** Second on the index (5.12), with innate powers, a constructible weapon, a dodge and a healing factor; without powers he is a fast, trained fifteen-year-old.
6. **A second area attack or real crowd control. No.** Every attack he has takes one target, and he is last on Crowd Control.

What nobody asked for, and he brought anyway:

- **The best ranged attack on the team** (§4.12, first on arrival), at ×7 +7, with a MECHANICAL FLAG that it may be ×8.
- **A second Suppressive Fire line, at ×7** — Oracle's debuff at nearly twice the multiplier, which set up the demoralise that ended the fight.
- **The team's only dodge reaction**, which stripped a Marvel and made a glitch bomb miss.
- **Objective denial at range**: the shot that destroyed the device the brood came for.
- **Ego 4**, the second-highest social ability score on the team, and a Monster trait that intimidates.

The verdict: one of six on paper, two in part, three not at all, and a strong specialist profile the vacancy did not describe. The newcomer replaced Exemplar II's senses and none of his adulthood. He enters third on the composite (+0.57), second on combat value, and fourth on non-combat potency.

11.4 Loose Ends He Leaves Behind

- **The Azimuth file.** He produced the only worked identification from Justice League material Wonder Woman handed him. The log does not record whether the team kept the file.
- **Wonder Woman's disclosure commitment** — *"every piece of available information I have, even if it is just suspicion"* — was made to him, in front of four witnesses. Finding 13 flags whether it still binds; the team briefed her after Session 16, and nothing in the log says what she shared back.
- **Exemplar I.** OOC He intends to overwrite his son, he knows this team, and in Session 10 he hacked a phone in seconds. He is outside the perimeter, and the roster's own backstory note anticipates him becoming *"an enemy of David and the group."*
- **Quasar-Force's lab access.** The roster still lists *"Exemplar's Dad's Lab"*, and it should be treated as stale.
- **Bedroom 3** is occupied again, by Edge.
- OOC **Precedent.** This campaign has lost three player characters before him: Robin was kidnapped, tortured and placed at the centre of a sacrifice ritual; Magius was abducted, and the abduction turned out to be staged; Up-Tempo quit silently. The GM has turned departures into plot before, and the father is the obvious hook if the GM wants one. VOLATILE

SECTION 12 · WHAT SESSION 16 ANSWERED, AND WHAT SESSION 17 SHOULD TEST

§12 Closing note on this revision

Session 16 had one fight, one arrival, no sheet changes among the returning four, and the hardest afternoon in the team's record. Every member went to zero Health or below. The brood explained, mid-fight, that it had gone for Quasar-Force first because of his fame, and then announced that its orders had changed to collecting the team. The team destroyed the device it came for, left three infected teenagers unconscious in a mob warehouse — one in handcuffs — and went home one teleport at a time.

The standings barely moved, and they moved for a reason. Fifty-nine axes changed among the returning four, a third of Session 15's 183. Oracle's composite lead widened from 0.36 to 0.39, the first widening since 0.77 → 0.81, because **the session tested what Oracle does and not what Quasar-Force does**: it ran on healing, debuffs and a plan, and nothing in it needed an engineer. On the 86 favourable axes Oracle is back in front, by three hundredths; the rest of his lead is still the risk section. **Edge enters third, at +0.57**, ahead of Lock-Step and Intrepid, on the flattest profile on the board, and the score-based and position-based methods disagree about whether he or Lock-Step is third.

Last revision asked Session 16 to test eight things:

1. **The Mob Warehouse.**
   - **The healing backup:** untested. Lock-Step's hex-heal was not needed, because the healer was never drained; it was the healer who carried the fight.
   - **The counter-build:** not used. The brood beat Oracle another way, with 72 physical damage and a reaction that turned his Return Fire onto a teammate. His healing factor got him up.
   - **The Force-infused whip against anything that phases:** never swung at a phaser in the log. The hand-waved ending credits it as one reason Blitzkrieg withdrew. VOLATILE
   - **The circlet against a telepath:** Argent made no recorded attempt. The circlet held against a power thief instead — the same Swipe that took Intrepid's Sturdy.
   - **Five infected teenagers the team wants to cure rather than kill:** no fatalities. Three were knocked out and left behind, one cuffed; two left on their own feet. None was secured, screened or cured.
2. **The Destined at STAR Labs.** Unresolved; not in the log. The errand came up twice in passing and nobody objected.
3. **Oracle's two advances.** Still undeclared, for a third session.
4. **Oracle's voice.** Not resolved. There was no lethal-force discussion; two passing references drew no objection from him, his own line about the five came out garbled, and it was Lock-Step who insisted on knock-outs. Carried.
5. **The replacement.** Scored throughout, and against the vacancy in §11.3: one of six on paper, two in part, three not at all, plus a specialist profile nobody asked for.
6. **Nightwing.** Off screen for a third session, and active for the first time in three: he recruited and briefed the newcomer, operating as Batman. The team briefed Wonder Woman, not him, and the report containing Day 56 is still unsent.
7. **The ring.** Not mentioned. A crime syndicate's device keyed to Lock-Step's time manipulation was, and it no longer exists.
8. **The flip.** Held. The fame-inclusive score composite favours Quasar-Force (by 0.21) while the position composite favours Oracle, for a second revision; the raw first-place count has disagreed with the headline composite for three.

What Session 17 should test:

1. **The three in the warehouse, and the 24-hour clock.** What happened to Argent, Stote and Blood Blade after the team left — and to the cuffed one in particular — decides §2.5 and §9.3 for Lock-Step, and finding 21 for everyone.
2. **The hive's collection order.** Whether *"collecting you"* becomes an operation against the team, and whom it goes for first. On Session 16's evidence, the answer is the member with the most fame and the least Health.
3. **The Destined errand.** Whether Lock-Step's private request was carried out is still the largest single swing available to him in §1, §2 and §9, and a real one for Quasar-Force. When it reports back, it is also the moment that settles **Oracle's voice**.
4. **Oracle's advances.** Undeclared for three sessions. If either bought a mental power that projects strength, or Uncanny, then §4.2, §4.5, §6.4, §7.3 and finding 5 all move.
5. **Edge's senses against obscurement.** The next time the team meets invisibility or a fog, finding 15 moves from paper to record, one way or the other.
6. **Edge's legend, and the mentor tag.** What the monster is, whether it can be woken, and which Oracle found him — the scores in §2.1, §2.8, §6.5 and §7.3 that carry VOLATILE markers all wait on the first answer.
7. **Quasar-Force's floor.** Energy Absorption at Rank 4 is the one purchase that answers both of Session 16's knockdowns. Until it lands, the next glitch bomb is the same test.
8. **The healing backup.** Lock-Step's hex-heal has been used once, in Session 14. If it recurs, finding 8 narrows; if Oracle is neutralised for longer than a round with nothing to replace him, it becomes the defining fact of the fight.
9. **Nightwing's first report.** It now has to cover Day 56, the warehouse, and the recruit he briefed without telling the team.
10. **The flip and the third place.** If the fame-inclusive lead holds again, the two methods disagree for a third revision. If Edge's score-based third survives a session with deep negatives in it, the methods will agree on him; if it does not, the position composite was right.
